The vagus nerve is an extremely long nerve that travels from the brainstem to the colon and has a long list of functions.

And it carries sensory information from both baroreceptors in the aorta that detect changes in blood pressure, and chemoreceptors in the aorta that sense oxygen levels in the blood.

There are several nuclei in the medulla associated with the vagus nerve and the different types of information it carries.

Symptoms of vagus nerve damage may include hoarseness of the voice, difficulty swallowing, and a deficient gag reflex.
