Information technology and the information sciences have been part of our lives for some time now. They have revolutionized the healthcare system, changing the whole health landscape, as well as health culture. New devices, sources of data and roles for all those involved in healthcare are being developed as a result. This book presents the proceedings of the 25th European Medical Informatics Conference, held in Istanbul, Turkey in August/September 2014. The conference aims to present the most recent developments in biomedical informatics. The book is divided into 15 sections, which include: decision support systems and clinical practice guidelines; improved healthcare through informatics; data analysis; mobile health; technology and system evaluation; and text mining. The final two sections present posters from the conference. The book will be of interest to all those in the healthcare sector, researchers and practitioners alike, who develop, evaluate or work with information technology.

### Skillmasters

Most clinicians seek guidelines and indicators as to the effectiveness of their interventions with clients. Some may even be implementing evidence-based interventions and seek an in-depth understanding of their results. This book helps clinicians who provide couple's or marriage therapy and counseling go from the ambiguous realm of "thinking" or "knowing" their effectiveness to being able to demonstrate it. It identifies effective strategies for common treatment concerns that connect to the successful outcomes of therapy. Here, the process starts even before the couple enters therapy and goes beyond the final session. Dr. Losey discusses specific outcome measures and how they can be used in session so that the couple can assess their relationship and develop specific goals and interventions for treatment. The author also examines session notes, pre-treatment change, and developing quality post-treatment goals in his discussion of clinical effectiveness.
