The Medical Age, 1888, Vol. 6

Excerpt from The Medical Age, 1888, Vol. 6: A Semi-Monthly Journal of Medicine and Surgery Dr. A. B. Strong was very glad to find that his article had excited so much interest. It is certainly a practical subject, and one we are likely to meet with any day, and I am yet in favor of resection. -it is my impression that the first resection was made about fifteen years ago. A point against resection was raised by Dr. Ingals - that of the too rapid evacuation of the matter. That point was ably answered by Dr. Skeer, who said that when we have free evacuation we have a corresponding influx of air which takes the place of pus. I believe that to be so. In the two cases reported there was considerable cough at the time the chest was opened, but that quickly subsided. I had no fear that there would be rupture of the lung; I could feel the pleura three-fourths of an inch thick. Until some better reasons are given for not operating, I shall certainly be in favor of making a free opening by resection. I want to make an opening large enough so that I can get into the cavity and evacuate it freely; I cannot get out enough pus through an eighth of an inch opening to satisfy me. In the case of the older boy, shreds of lymph as large as the little finger were thrown out for several days. I have no fear in opening the chest freely and draining it freely. The Medical Age, 1887, Vol. 6

Excerpt from The Medical Age, 1887, Vol. 6: A Semi-Monthly Journal of Medicine and Surgery The use of the curette in removing adenoid vegetations is quite a recent thing. The method that the author speaks of I have not tried to any great extent, and I prefer the gouge forceps; I generally use the galvano cautery, as it is now possible to use it without difficulty with the aid of cocaine, and there being no blood lost is a very important consideration in the treatment of young subjects, because, even if they have no pain, if they see a drop of blood they think they are being killed, and begin to scream. Dr. M. R. Brown said: In regard to the mirror, the size recommended by the author I think rather large, and apt to produce gagging by coming in contact with the pharyngeal walls, but if cocaine is used this may be avoided, and should a mirror about half the diameter of the one shown be employed in posterior rhinoscopy, nine out of ten instead of three out of four cases can be examined at the first visit. As the Walt Disney Studio entered its first decade and embarked on some of the most ambitious animated films of the time, Disney hired a group of "concept artists" whose sole mission was to explore ideas and inspire their fellow animators. They Drew as They Pleased showcases four of these early pioneers and features artwork developed by them for the Disney shorts from the 1930s, including many unproduced projects, as well as for Snow White and the Seven Dwarfs, Pinocchio, and some early work for later features such as Alice in Wonderland and Peter Pan. Introducing new biographical material about the artists and including largely unpublished artwork from the depths of the Walt Disney Archives and the Disney Animation Research Library, this ebook offers a window into the most inspiring work created by the best Disney artists during the studio's early golden age. They Drew as They Pleased is the first in what promises to be a revealing and fascinating series of books about Disney's largely unexamined concept artists, with six volumes spanning the decades between the 1930s and 1990s. The Age-Well Project dived deep into the science of ageing well, and authors Annabel and Susan explained how they overhauled their own lives to prioritise healthy longevity. In The Age-Well Plan, Susan draws on almost a decade of extensive research into healthy longevity and her experience as a health coach to give you the tools you need to live your own age-well life. Her simple, clear and easy-to-follow six-week plan will show you how to make changes -- small and large -- to support healthy ageing, and prioritise the changes most appropriate for your body, lifestyle and circumstances. The first week of the plan guides you to understand your goals as you age and explains how to evaluate your current health and risk factors, in order to devise a bespoke plan for your body and brain. The subsequent weeks focus on the key elements of healthy ageing -- diet, exercise, sleep, engagement and the environment -- to help you build a personalised plan that will kickstart your age-well life.

Excerpt from The Medical Clinics of North America, Vol. 6: November, 1922 The published record extended to June, 1917. The weight was then kg. (100 pounds). The diet had never averaged higher than 70 gm. Protein, 10 gm. Carbohydrate, and 1500 calories. During his entire time at home the

patient had carried on his regular business with only six days' total absence on account of colds. This same condition continues today. Glycosuria and aci dosis remain continuously absent. Slight hyperglycemia has been the rule rather than the exception, but it is permissible in a case of this type because the age involves less tendency to progressiveness than in younger persons and children. Inherent non-progressiveness of the condition cannot be assumed as an explanation of the good result or an excuse for the high mortality among adults with Similar or milder cases on excessive diets in this series. We have here a decisive contrast between two periods: first, eight years with active symptoms and extreme downward progress; second, eight years on reduced diet with out symptoms and without downward progress. The case is still severe and the tolerance low. It is known that diabetes is hardest to control in the severe stage. What has been aecom plished for this patient can be accomplished for all patients Of this type, granted fidelity to diet and the absence Of any unusual complications. With milder cases the results are correspondingly easier and better. For typical patients of this age or Older the question of spontaneous downward progress is definitely decided in the negative. The second case was No. 66 in the Rockefeller Institute series. This girl was received for treatment in March, 1916.
