Austin joins Dallas and Houston in Akashic's deep dive into the Lone Star State's darkest dimensions Featuring brand-new stories by: Gabino Iglesias, Ace Atkins, Amanda Moore, Jeff Abbott, Scott Montgomery, Richard Z. Santos, Alexandra Burt, Lee Thomas, Miriam Kuznets, Jacob Grovey, Chaitali Sen, Molly Odintz, Amy Gentry, and Andrew Hilbert. From the editors' introduction: "You've probably heard of Austin. You may have been here for South by Southwest. Your best friend may have recently relocated here from California. You might have thought about moving here yourself, then decided it wasn't worth it to live in Texas. You may have moved to Austin decades ago. You may even have been born and raised in Austin, and now you're on the outskirts of San Antonio or (god forbid) Waco because you can't afford to buy a house anywhere else. Or you may be living in a shiny new building downtown, watching the final stages of a sleepy town's transformation into modern metropolis. One thing you'll hear from almost any Austin resident: it was better when they got here . . . "As the city expands, construction never stops, struggling futilely to keep up with new demand. The running joke is that the city bird is the crane. Rents and property values keep climbing. We fear becoming Dallas . . . The writers contributing to this collection represent a kaleidoscopic view of the city—not just in where they set the stories, but in their different social, economic, and cultural perspectives."

A guide for software development of the dynamic security assessment and control of power systems, Structure Preserving Energy Functions in Power Systems: Theory and Applications takes an approach that is more general than previous works on Transient Energy Functions defined using Reduced Network Models. A comprehensive presentation of theory and applications, this book: Describes the analytics of monitoring and predicting dynamic security and emergency control through the illustration of theory and applications of energy functions defined on structure preserving models Covers different facets of dynamic analysis of large bulk power systems such as system stability evaluation, dynamic security assessment, and control, among others Supports illustration of SPEFs using examples and case studies, including descriptions of applications in real-time monitoring, adaptive protection, and emergency control Presents a novel network analogy based on accurate generator models that enables an accurate, yet simplified approach to computing total energy as the aggregate of energy in individual components The book presents analytical tools for online detection of loss of synchronism and suggests adaptive system protection. It covers the design of effective linear damping controllers using FACTS, for damping small oscillations during normal operation to prevent transition to emergency states, and emergency control based on FACTS, to improve first swing stability and also provide rapid damping of nonlinear oscillations that threaten system security during major disturbances. The author includes detection and control algorithms derived from theoretical considerations and illustrated through several examples and case studies on text systems.

Go Beyond the FAR! The guidance contained in the almost 2000 pages of the Federal Acquisition Regulation and the various agency supplements are just a part of the resources government acquisition professionals need to do their jobs effectively. Accessing and understanding case law is equally important to a thorough understanding of government contracting. Legal decisions explain the Government Accountability Office's and the courts' views on how procurement statutes and regulations apply in a wide range of situations. Case law also gives potential bid protesters and agencies a way to gauge the likely outcome of a protest. Until now, it has been difficult to find and understand the legal decisions that could be relevant to a particular situation. Key Case Law Rules for Government Contract Formation changes that by organizing and explaining the most important protest grounds in a readily accessible and comprehensible way. With an emphasis on more recent cases, the book is organized around the key protest grounds, such as pricing issues, allegations that the government wrongfully prevented competition, or improper sealed-bidding procedures. Bridging the gap of understanding between the legal and the contracting communities, this book is a much-needed addition to the essential resources for acquisition professionals.

Humans are surrounded by trillions of stimuli. Their eyes, for instance, can discriminate 7,500,000 colors. But, there is a severe limitation in the number of discriminably different stimuli that they can

process at one time. George Miller argued that they can handle no more than seven, plus or minus two independent pieces of information at any given time. Thus, necessarily they must develop ways to simplify the task of processing the information that exists in their environment. They do this in many ways. One way is to select the stimuli that are most important in their lives, what are often called values. Another way is to chunk stimuli by linking them to each other, so they form bundles of stimuli that can be processed as if they are one entity. Generalized expectancies of what is linked with what are beliefs, and these beliefs are structured into bundles (see Triandis, 1972).

This volume covers the techniques necessary for a successful fragment-based drug design project, beginning from defining the problem in terms of preparing the protein model, identifying potential binding sites, and the consideration of various candidate fragments for simulation. The second part discusses the technical aspects that various methods have used to simulate fragment binding to a target protein by using Monte Carlo, molecular dynamics, and docking algorithms. After simulations, fragments are assembled into molecules using a variety of approaches, which are explored next. A discussion of design strategies and consideration of drug-like properties is included as part of the design process at this stage. Finally, several examples of successful fragment-based drug design projects are presented. Written for the Methods in Molecular Biology series, this work contains the kind of detailed description and implementation advice to encourage success in the lab. Practical and cutting-edge, *Fragment-Based Methods in Drug Discovery* takes into account the great accomplishments in the field to provide an ideal guide for researchers continuing to investigate this exciting area of pharmacological study.

Mathematical modelling has become an indispensable tool for engineers, scientists, planners, decision makers and many other professionals to make predictions of future scenarios as well as real impending events. As the modelling approach and the model to be used are problem specific, no single model or approach can be used to solve all problems, and there are constraints in each situation. Modellers therefore need to have a choice when confronted with constraints such as lack of sufficient data, resources, expertise and time. *Environmental and Hydrological Systems Modelling* provides the tools needed by presenting different approaches to modelling the water environment over a range of spatial and temporal scales. Their applications are shown with a series of case studies, taken mainly from the Asia-Pacific Region. Coverage includes: Population dynamics Reaction kinetics Water quality systems Longitudinal dispersion Time series analysis and forecasting Artificial neural networks Fractals and chaos Dynamical systems Support vector machines Fuzzy logic systems Genetic algorithms and

genetic programming This book will be of great value to advanced students, professionals, academics and researchers working in the water environment.

Originating from models of biological neural systems, artificial neural networks (ANN) are the cornerstones of artificial intelligence research. Catalyzed by the upsurge in computational power and availability, and made widely accessible with the co-evolution of software, algorithms, and methodologies, artificial neural networks have had a profound impact in the elucidation of complex biological, chemical, and environmental processes. *Artificial Neural Networks in Biological and Environmental Analysis* provides an in-depth and timely perspective on the fundamental, technological, and applied aspects of computational neural networks. Presenting the basic principles of neural networks together with applications in the field, the book stimulates communication and partnership among scientists in fields as diverse as biology, chemistry, mathematics, medicine, and environmental science. This interdisciplinary discourse is essential not only for the success of independent and collaborative research and teaching programs, but also for the continued interest in the use of neural network tools in scientific inquiry. The book covers: A brief history of computational neural network models in relation to brain function Neural network operations, including neuron connectivity and layer arrangement Basic building blocks of model design, selection, and application from a statistical perspective Neurofuzzy systems, neuro-genetic systems, and neuro-fuzzy-genetic systems Function of neural networks in the study of complex natural processes Scientists deal with very complicated systems, much of the inner workings of which are frequently unknown to researchers. Using only simple, linear mathematical methods, information that is needed to truly understand natural systems may be lost. The development of new algorithms to model such processes is needed, and ANNs can play a major role. Balancing basic principles and diverse applications, this text introduces newcomers to the field and reviews recent developments of interest to active neural network practitioners.

America's future will be unlimited if we return to wholesomeness, gratitude, and vision, for we must rise as one people or fall as many. Pillars for Freedom charts a brave path forward to imbue America with strength, economic security, and virtue. The American Experiment is unique in history in its conception of liberty, which is freedom from oppressive government and its yoke. We are a nation that rests on the rule of law and not the imperfections present in all humankind. Today, the bureaucratic state, which controls our government, relies on diversion, untrue narratives, and misdirection to cover incompetence and gross misdeeds. This cannot be our country's standard. The maintenance of liberty rests upon our faith, our Founding, our families, and our commitments to uncorrupted education and science. Pillars for Freedom describes in consummate detail the powers that America must reconstitute and wield in order that we reclaim our destiny. Our Judeo-Christian heritage must form the center of America's rebirth. Through marshalling our priceless heritage, we can rebuild our military, secure economic strength, and reassert energy dominance, as we rebuild our civil society. The actions of our government must, at all times, hold the needs of the American people as our North Star. An obligation of governance is to consider the world as it is and to weave together tools that reflect the entire extent of our nation's power. America must convey resolve through precision in international affairs to meet our strategic objectives. We must renew the American dream. To do so, we must honor the past in order that our country may light the way for the entire world. This momentous book marks a turning point. It is a lantern that will lead us to the break of dawn for our nation.

Self-efficacy, according to Bandura (1977), is defined as "beliefs in one's capabilities to organize and execute the courses of action required to produce given attainments." Applying Bandura's essential theory, this captivating book provides a practitioner-friendly overview of the concepts, vocabulary,

practices, and contexts related to teacher self-efficacy. The members of the Association of Teacher Educators' Commission on Self-Efficacy share their knowledge and expertise written as case studies for readers to become more aware of teacher self-efficacy. *Self-Efficacy in Action* engages readers in the meaningful discussions of practices and purposes of teacher self-efficacy to advance professionalism. The combination of vignettes, content, discussion questions, and resources guide and support educators and teacher candidates to appreciate the benefits of professional growth and development focused on enhancing self-efficacy for the benefit of student learning and achievement.

Used routinely in drug control laboratories, forensic laboratories, and as a research tool, thin layer chromatography (TLC) plays an important role in pharmaceutical drug analyses. It requires less complicated or expensive equipment than other techniques, and has the ability to be performed under field conditions. Filling the need for an up-to-date, complete reference, *Thin Layer Chromatography in Drug Analysis* covers the most important methods in pharmaceutical applications of TLC, namely, analysis of bulk drug material and pharmaceutical formulations, degradation studies, analysis of biological samples, optimization of the separation of drug classes, and lipophilicity estimation. The book is divided into two parts. Part I is devoted to general topics related to TLC in the context of drug analysis, including the chemical basis of TLC, sample preparation, the optimization of layers and mobile phases, detection and quantification, analysis of ionic compounds, and separation and analysis of chiral substances. The text addresses the newest advances in TLC instrumentation, two-dimensional TLC, quantification by slit scanning densitometry and image analysis, statistical processing of data, and various detection and identification methods. It also describes the use of TLC for solving a key issue in the drug market—the presence of substandard and counterfeit pharmaceutical products. Part II provides an in-depth overview of a wide range of TLC applications for separation and analysis of particular drug groups. Each chapter contains an introduction about the structures and medicinal actions of the described substances and a literature review of their TLC analysis. A useful resource for chromatographers, pharmacists, analytical chemists, students, and R&D, clinical, and forensic laboratories, this book can be utilized as a manual, reference, and teaching source.

Success in solution business starts by accepting that solution business is a separate business model, not simply another product category or an extension of the existing product business. This book identifies the business model areas that firms need to focus on when transforming into solution business. It further organizes these areas into three sets of capabilities and practices: commercialization, industrialization and solution platforms. This is the first book to take a comprehensive view of success in solution business and its relevance therefore extends to all functions of firms wanting to become solution providers as well as to many managerial levels. The book will also help you self-assess how ready your organization is for success in solution business.

Microsoft Access Small Business Solutions

During the last thirty years, a wide range of product companies throughout the Western economies have considered moving into or setting up service businesses. Some have rejected the idea after careful consideration, some have wandered into competitive services without any real idea of what is involved and others have deliberately executed a carefully considered strategic manoeuvre. Included in this debate are some of the most famous business names in the western world: Unisys, Ericsson, Michelin, Nokia and HP. For IBM it was Lou Gerstener's 'big bet'; at GE it was one of former CEO Jack Welch's 'four major strategies' and, at General Motors, the financial services arm was its most profitable business for many years. Yet very little has been published on this profound transition. As a result, myths and idiocies abound. Some routinely claim that the 'evolution from products through services to solutions' is inevitable. Others think that manufacturing is being outsourced to China and India while American or European teenagers face a career in hamburger stalls. The truth is much more fascinating. To succeed in a service business, most functions of a product company need to change. Operations, management, recruitment, finance, sales, new product development and marketing must all be adjusted. So the move into service therefore involves huge risk caused by disruptive and radical change. What has pushed realistic business people in such widely different industrial sectors to take so large a risk? Does their experience contain lessons or warnings for others? Is the trend likely to continue and affect other parts of the world as their economies develop? Will India, China or other developing economies need to learn how to export service once their manufacturing industries mature? Written by a successful businessman who has been at the heart of these changes in several companies and, with case studies from companies like IBM, Unilever, BT, Michelin, Ericsson and Nokia, this book explores the experience of those who have made the transition; and some who have resisted it. It covers in depth subjects such as: strategic focus, change management, service operations, branding a service business, service sales and service marketing. It is the first major work on this subject. "This book is a 'must read' for those considering the plunge into service growth and innovation. Even those companies that have already taken the plunge will gain fresh perspective" —Jim Spohrer, Director, IBM Almaden Research Centre, USA "Laurie Young details in very practical ways the reasons and methodologies for change ... I would recommend this book to every one of my customers." —Douglas Morse, Managing Principal for the Services Transformation and Innovation Group LLC "I am thrilled with the publication of this much needed book. In my work with businesses around the globe, I find that grappling with the challenge of transforming a company from products to services is a compelling priority for increasing numbers of firms." —Stephen W. Brown, PhD, Carson Chair, Professor and Executive Director, Center for Services Leadership, W. P. Carey School of Business, Arizona State University

From Products to Services

The goal for consumer oriented business should be to make a profit and to do it without costing the Earth. Yet exactly how to satisfy the needs and wants of consumers without contributing to environmental degradation is proving to be the essential, but elusive goal for businesses in the 21st century. The leading solution is to substitute material consumption with the consumption of services that offer consumers convenience and value but eliminate much of the inefficiency and waste associated with our throw-away society. Sustainable consumer services for households - services that are delivered to consumers at the premises such as home delivery of organic food, appliance leasing, mobile laundry services, internet marketing of homeservices or car pool schemes - provide a key part of the answer of how to reduce material consumption and waste while still turning a profit. Yet until now there has been little information to guide the development of such business models and practices, and to develop ways to make service-based consumption more attractive to consumers than object-ownership-based models. This book, equally a practical business handbook and business course text, provides the missing link in sustainable household service competitiveness by examining the issues, looking at business models, providing dozens of real-life best-practice examples and presenting data from the first large-scale consumer survey that explains consumer behaviour and what they want from home service provision. The book is an essential resource for businesses and public or nonprofit organizations and housing organizations entering the growing consumer services market. It provides a wealth of business know-how on what works and what doesn't, how to avoid potential pitfalls, and how to provide consumer services at the household level that are profitable, environmentally sustainable and that add to consumers quality of life.

Used around the world by a wide range of people, professions and organisations, the first edition has now sold nearly 10,000 copies and been translated into 7 languages. Including new chapters reflecting the increasing importance of coaching and the solutions focus movement in the business environment, this wide-ranging book is filled with all the most important ideas, case examples and practical tips for managers, facilitators and consultants. Proven in many fields and with a distinguished intellectual heritage, "The Solutions Focus" provides a simple and direct route to progress in your organisation. It focuses on: solutions - not problems; in between: the action is in the interaction; make use of what's there; possibilities - past, present and future; and language. Every case is different. The trouble with traditional approaches to people problems is that they assume a straightforward relationship between cause and effect, between a problem and its solution. A solutions-focused approach sidesteps the search for the causes of a problem and heads straight for the solution, showing you how to envisage your preferred future and quickly takes steps forward. The authors present a set of practical techniques, including specific forms of questioning that lead to immediate action and results. They show how to identify what is working in your organisation and amplify it to make useful changes; to focus on what is possible rather than what is intractable and how to be solution focused, not solution forced.

Lean Manufacturing has proved to be one of the most successful and most powerful production business systems over the last decades. Its application enabled many companies to make a big leap towards better utilization of resources and thus provide better service to the customers through faster response, higher quality and lowered costs. Lean is often described as “eyes for flow and eyes for muda” philosophy. It simply means that value is created only when all the resources flow through the system. If the flow is stopped no value but only costs and time are added, which is muda (Jap. waste). Since the philosophy was born at the Toyota many solutions were tailored for the high volume environment. But in turbulent, fast-changing market environment and progressing globalization, customers tend to require more customization, lower volumes and higher variety at much less cost and of better quality. This calls for adaptation of existing lean techniques and exploration of the new waste-free solutions that go far beyond manufacturing. This book brings together the opinions of a number of leading academics and researchers from around the world responding to those emerging needs. They tried to find answer to the question how to move forward from “Spaghetti World” of supply, production, distribution, sales, administration, product development, logistics, accounting, etc. Through individual chapters in this book authors present their views, approaches, concepts and developed tools. The reader will learn the key issues currently being addressed in production management research and practice throughout the world.

The Business of Possibility - reimagining your organisation - the essence of the entrepreneur. This book holds the potential to mark a paradigm shift for those in business and other organisations. It may be the first ground-breaking work since the book by Peters and Waterman - In Search of Excellence - almost 40 years ago. This is a guide. It points to and explains the shift business leaders - men and women - and the influential must make to create sustainable organisations. That is, if they want to thrive in this new world, we have all entered. It demands that you take your own journey of deepening, or re-discovering, your innate transformative state - your own state of Possibility. Possibility is the superhighway you travel along when seeing and manifesting any transformative idea. It leads to a new life and relationships - the vital ingredients in transforming your business or organisation. In this guide, John recounts instances from his life of seeing Possibility, the impact these instances had on his business, as well as on the lives of many of his colleagues and clients. He explains how you too can see Possibility; what it might and might not be; the benefit of letting go of thinking you know 'the truth'; the freedom that seeing Possibility can give you; and how, when seen, it can re-cast how you see life, and re-shape your communications, relationships, business, family and vocational life for your own benefit and for the common good. In seeing Possibility, you - like John - can see a world in which we are kind and understanding towards one another, where a sense of fairness and decency govern all our decisions at work and at play. The Business of Possibility guides you on a journey that will benefit all of us. Author bio - John A. Wood At 19, John turned around a run-down delicatessen into the most successful in his city. At 22, John renovated an old plywood caravan in his parents' driveway. He pioneered from that humble start Fleetwood Corporation Ltd, one of the largest and most successful groups of its type in Australia. He retired from Fleetwood at 48, travelled extensively, and trained for five years in the work inspired by Sydney Banks. John founded the Philosophy of Living Centre in Perth - the first coaching, counselling, and training organisation of its kind outside North America - and led it successfully for 12 years. He has worked with individuals from all backgrounds - the poorest to the very rich. And organisations from back yard start-ups to multi-national corporations. The Business of Possibility - reimagining your organisation follows on from Possibility ... a state of mind. They bring to print his life's work to date and his contribution to a better future for humankind of which businesses and organisations are the places in which most of us live each day. He has created The Realm of Possibility Project, a not for profit foundation, so everyone can see Possibility and transform their world and in doing so transforming the world. John lives with his wife in the hills of Darlington, east of Perth, Western Australia.

Agent-based modeling and simulation (ABMS), a way to simulate a large number of choices by individual actors, is one of the most exciting practical developments in business modeling since the invention of relational databases. It represents a new way to understand data and generate information that has never been available before--a way for businesses to view the future and to understand and anticipate the likely effects of their decisions on their markets and industries. It thus promises to have far-reaching effects on the way that businesses in many areas use computers to support practical decision-making. Managing Business Complexity is the first complete business-oriented agent-based modeling and simulation resource. It has three purposes: first, to teach readers how to think about ABMS, that is, about agents and their interactions; second, to teach readers how to explain the features and advantages of ABMS to other people and third, to teach readers how to actually implement ABMS by building agent-based simulations. It is intended to be a complete ABMS resource, accessible to readers who haven't had any previous experience in building agent-based simulations, or any other kinds of models, for that matter. It is also a collection of ABMS business applications resources, all assembled in one place for the first time. In short, Managing Business Complexity addresses who needs ABMS and why, where and when ABMS can be applied to the everyday business problems that surround us, and how specifically to build these powerful agent-based models.
