

Renfrew Action Picture Test

[#Renfrew Action Picture Test](#) [#language assessment children](#) [#speech therapy resources](#) [#expressive language evaluation](#) [#child communication skills](#)

The Renfrew Action Picture Test is a widely used clinical tool designed to assess expressive language abilities in children. It employs a series of action-based pictures to evaluate a child's vocabulary, sentence structure, and overall capacity to describe events, crucial for identifying language delays and guiding appropriate speech and language therapy interventions.

Intro

Monitor participants gaze and record visual field from THEIR perspective

Tick underneath each word if read correctly

You can repeat each of the numbers up to two times

Multiple choice pointing options available (e.g. for aphasia)

Participant is not marked down for using multiple choice

Practice until patient fully understands the task instructions, use the 2nd practice page if necessary

If participant has allocentric neglect, they may also cross out a specific gap type, this does not class as a reason to abort the test

Record the time. Max 3 minutes Stop when participant indicates they have finished.

Ensure the middle of the page remains at the participant's midline

If the participant makes an error, repeat the gestures

If the gestures are both correct first time: score = 3 If the gestures are both correct on repeat trial: score = 2

Follow the same scoring guidelines for finger positions

Use this practice page to explain and practice until the participant fully understands the task

Don't give any help with the test pages. Record the time

Scoring criteria: every correct connection earns a point
