Numerical Notation

This book is a cross-cultural reference volume of all attested numerical notation systems (graphic, non-phonetic systems for representing numbers), encompassing more than 100 such systems used over the past 5,500 years. Using a typology that defies progressive, unilinear evolutionary models of change, Stephen Chrisomalis identifies five basic types of numerical notation systems, using a cultural phylogenetic framework to show relationships between systems and to create a general theory of change in numerical systems. Numerical notation systems are primarily representational systems, not computational technologies. Cognitive factors that help explain how numerical systems change relate to general principles, such as conciseness or avoidance of ambiguity, which apply also to writing systems. The transformation and replacement of numerical notation systems relates to specific social, economic, and technological changes, such as the development of the printing press or the expansion of the global world-system.

First published in 1981, the book has undergone several editions and is widely acclaimed and ranks among the most authentic historical books on the history and culture of Odisha. In addition, there are six elaborate appendices, where the author examines, dissects, and elucidates on various intriguing issues and old theories: situating the date of Kharavela; the accounts of Arab travellers; the historicity of the Madala Panji; and the research credibility of "Odia Mahabharat" by Sarala Dasa. Political and Cultural History of Orissa

Ranging from cuneiform to shorthand, from archaic Greek to modern Chinese, from Old Persian to modern Cherokee, this is the only available work in English to cover all of the world's writing systems from ancient times to the present. Describing scores of scripts in use now or in the past around the world, this unusually comprehensive reference offers a detailed exploration of the history and typology of writing systems. More than eighty articles by scholars from over a dozen countries explain and document how a vast array of writing systems work--how alphabets, ideograms, pictographs, and hieroglyphics convey meaning in graphic form. The work is organized in thirteen parts, each dealing with a particular group of writing systems defined historically, geographically, or conceptually. Arranged according to the chronological development of writing systems and their historical relationships within geographical areas, the scripts are divided into the following sections: the ancient Near East, East Asia, Europe, South Asia, Southeast Asia, and the Middle East. Additional parts address the ongoing process of decipherment of ancient writing systems; the adaptation of traditional scripts to new languages; new scripts invented in modern times; and graphic symbols for numerical, music, and movement notation. Each part begins with an introductory article providing the social and cultural context in which the group of writing systems was developed. Articles on individual scripts detail the historical origin of the writing system, its structure (with tables showing the forms of the written symbols), and its relationship to the phonology of the corresponding spoken language. Each writing system is illustrated by a passage of text, and accompanied by a romanized version, a phonetic transcription, and a modern English translation. A bibliography suggesting further reading concludes each entry. Matched by no other work in English, *The World's Writing Systems* is the only comprehensive resource covering every major writing system. Unparalleled in its scope and unique in its coverage of the way scripts relate to the languages they represent, this is a resource that anyone with an interest in language will want to own, and one that should be a part of every library's reference collection.

Illustrations: 21 Maps Description: Royal endowments to Brahmanas have been interpreted either as a factor of political integration or disintegration in Indian history. Through the first thorough presentation and analysis of the epigraphic data from Orissa, this study argues that the period AD 300-1147 was one of intensive state formation and political development in which royal grants played an important integrative role. During this period, Brahmanas, many of whom were ritual specialists associated with the Yajurveda, emerged as land-holders endowed by royal decree with privileged control over land. Despite the consistent appearance of sectarian affiliations in the royal inscriptions, temples did not benefit from royal patronage on a comparable scale. Until the close of the period under review, it was the gift of land to Brahmanas, not the royally-endowed temple establishment that was a major basis of royal legitimation and political integration in Orissa.
