Improvements in information and communication technologies (ICTs) have brought about a sea change in the ways in which most people in the industrialized world work. In many organizations the ability to "work remotely" or "telecommute" has helped productivity improve. However, many of the benefits promised by the onset of "mobile working" have failed to materialize. This book explains the technology and strategic issues surrounding mobile working and presents a clear analysis of how this process can be managed. Combining a better understanding of the state of the art in e-business technologies with a focus on how organizations can effectively provide information support for mobile working, this book will also investigate the relationship between human and organizational factors and success in mobile working. With detailed case studies from a range of countries, this book will be useful reading on a range of courses at Masters and MBA level, including e-business, mobile technologies, operations management, technology management and change management.

High Impact Teaching for Sport and Exercise Psychology Educators

This book provides faculty and instructors with an introductory guide to integrating mobile learning in their courses. Recognizing that a smartphone is the first and main piece of technology anyone owns, with ownership exceeding 95% for those aged 18-29, with a sizable minority of these being smartphone-dependent; and that instructors are relying on technology for teaching and learning more than ever; this book addresses the imperative that course materials and interactions be increasingly available through the technology that students use most often. Dispelling the notion that mobile learning is for the tech-savvy and adventurous, mobile-mindful teaching offers teachers a way to take a few steps at a time, share options with students, and progressively develop ideas and practices. The book invites you to explore your own way into mobile learning. Christina Moore stresses two principles as you engage with mobile learning--intention and fluidity. This begins with mindfully implementing mobile learning opportunities so that students see the usefulness of learning via phone; and recognizing the fluid learning environments in which students learn so you can offer online modalities and functions appropriate to purpose and situations. The book opens with a "start with self" section on How to Be a Mobile Mindful Learner, offering ideas on exploring the almost infinite available online resources in your discipline to curate a rich and ever-expanding compilation of ideas for use in your scholarly work and teaching; and identifying different types of learning (digital reading, audio and visual learning, and social learning) across multiple devices and contexts to consider as you develop your course. The section "Toward Mobile-Mindful Teaching" explores ways to add mobile options to existing learning materials and how they and the LMS functions you use are rendered on a phone by taking a mobile test drive through your course. Christina Moore shows how, by building up your mobile learning skills to be a more productive scholar and developing habits that feed your curiosity and creativity, you can start planning how you can create fluid learning opportunities for your students they can access across devices, time, and space, and take advantage of found moments of time and informal spaces.

Internet use-related addiction problems (e.g., Internet addiction, problem mobile phone use, problem gaming, and social networking) have been defined according to the same core element: the addictive symptomatology presented by individuals who excessively and problematically behave using the technology. Online activity is the most important factor in their lives, causing them the loss of control by stress and difficulties in managing at least one aspect of their daily life, affecting users' wellbeing and

health. In 2018, Gaming Disorder was included as a mental disease in the 11th Revision of the International Classification of Diseases by the World Health Organization. In 2013, the American Psychiatric Association requested additional research on Internet Gaming Disorder. The papers contained in this e-Book provide unique and original perspectives on the concept, development, and early detection of the prevention of these health problems. They are diverse in the nature of the problems they deal with, methodologies, populations, cultures, and contain insights and a clear indication of the impact of individual, social, and environmental factors on Internet use-related addiction problems. The e-Book illustrates recent progress in the evolution of research, with great emphasis on gaming and smartphone problems, signaling areas in which research would be useful, even cross-culturally.

Biochemistry

Biochemistry is a major new textbook designed and created specifically for briefer courses in the subject. Written by Prof. Terry Brown of the University of Manchester (author of Genomes and Gene Cloning), the book provides the necessary detail and rigour expected for these courses, but without the extraneous material found in the larger textbooks. With an increasing number of students taking a short course in biochemistry there is a growing need for a book that covers the subject concisely and succinctly. Biochemistry has been designed from the outset for these shorter courses; it is not a cut-down version of one of the larger books that dominate the market. Although it is shorter, there is no compromise in content, style and coverage. The book is attractively designed in full colour throughout with all the pedagogical features expected in a major textbook. It covers what students should be expected to know and is written in the clear and accurate writing style for which Terry Brown is widely lauded. With its competitive price and resources for adopting lecturers (all of the illustrations and diagrams from the book, and answers to the end of chapter questions), Biochemistry will become the textbook of choice for any brief biochemistry course. Confirmed Adoptions Biochemistry is already the required text at the following institutions: Becker College, USA Bishop Burton College, UK Bournemouth University, UK Charles R. Mastering the PMI Risk Management Professional (PMI-RMP) Exam

Risk Management Professionals seek to identify, analyze, and document the risks associated with a company's business operations, as well as monitor the effectiveness of risk management processes and implement needed changes. The PMI Risk Management Professional (PMI-RMP)® certification not only highlights the ability to identify and assess project risks, mitigate threats, and capitalize on opportunities, but it also enhances and protects the needs of the organization. Gaining distinction as a PMI-RMP sets the Risk Management Professional apart from other professionals and brings credit to an organization. The exams from the Project Management Institute are not easy, so whether you are running a course as an instructor or studying by yourself, you need a good study guide to maximize time spent studying and one which enhances the chances of passing the exam. Test takers sitting for the exam need a study guide that suggests which study materials are best to read in preparation for the exam, presents exercises to enhance learning and understanding, and provides sample exam questions. Most study guides just explain the contents of the exam without providing the tools to maximize learning. Klaus Nielsen, an Authorized Training Partner with PMI, translates the PMI examination content outline for April 2022 into what people need to do and know in preparation and provides them with exercises and prep questions as a quick and easy check to ensure they are on the right path in preparation for taking the exam. This book helps maximize the chance of passing the exam.

Underwriting Training Handbook

"It appears to me that if one wants to make progress in mathematics one should study the masters and not the pupils." —Niels Henrik Abel Recent pedagogical research has supported Abel's claim of the effectiveness of reading the masters. Students exposed to historically based pedagogy see mathematics not as a monolithic assemblage of facts but as a collection of mental processes and an evolving cultural construct built to solve actual problems. Exposure to the immediacy of the original investigations can inspire an inquiry mindset in students and lead to an appreciation of mathematics as a living intellectual activity. TRIUMPHS (TRansforming Instruction in Undergraduate Mathematics via Primary Historical Sources) is an NSF-funded initiative to design materials that effectively harness the power of reading primary historical documents in undergraduate mathematics instruction. Teaching and Learning with Primary Source Projects is a collection of 24 classroom modules (PSPs) produced by TRIUMPHS that incorporate the reading of primary source excerpts to teach core mathematical topics. The selected excerpts are intertwined with thoughtfully designed student tasks that prompt students to actively engage with and explore the source material. Rigorously classroom tested and scrupulously edited to comply with the standards developed by the TRIUMPHS project, each of the PSPs in this volume can be inserted directly into a course in real analysis, complex variables, or topology and used to replace a standard textbook treatment of core course content. The volume also contains a comprehensive historical overview of the sociocultural and mathematical contexts within which the three subjects developed, along with extensive implementation guidance. Students and faculty alike are afforded a deeper classroom experience as they heed Abel's advice by studying today's mathematics through the words of the masters who brought that mathematics to life. Primary sources provide motivation in the words of the original discoverers of new mathematics, draw attention to subtleties, encourage reflection on today's paradigms, and enhance students' ability to participate equally, regardless of their background. These beautifully written primary source projects that adopt an "inquiry" approach are rich in features lacking in modern textbooks. Prompted by the study of historical sources, students will grapple with uncertainties, ask questions, interpret, conjecture, and compare multiple perspectives, resulting in a unique and vivid guided learning experience. —David Pengelley, Oregon State University

This book provides a coherent and complete overview of various Question Answering (QA) systems. It covers three main categories based on the source of the data that can be unstructured text (TextQA), structured knowledge graphs (KBQA), and the combination of both. Developing a QA system usually requires using a combination of various important techniques, including natural language processing, information retrieval and extraction, knowledge graph processing, and machine learning. After a general introduction and an overview of the book in Chapter 1, the history of QA systems and the architecture of different QA approaches are explained in Chapter 2. It starts with early close domain QA systems and reviews different generations of QA up to state-of-the-art hybrid models. Next, Chapter 3 is devoted to explaining the datasets and the metrics used for evaluating TextQA and KBQA. Chapter 4 introduces the neural and deep learning models used in QA systems. This chapter includes the required knowledge of deep learning and neural text representation models for comprehending the QA models over text and QA models over knowledge base explained in Chapters 5 and 6, respectively. In some of the KBQA models the textual data is also used as another source besides the knowledge base; these hybrid models are studied in Chapter 7. In Chapter 8, a detailed explanation of some well-known real applications of the QA systems is provided. Eventually, open issues and future work on QA are discussed in Chapter 9. This book delivers a comprehensive overview on QA over text, QA over knowledge base, and hybrid QA systems which can be used by researchers starting in this field. It will help its readers to follow the state-of-the-art research in the area by providing essential and basic knowledge.
