This book considers soilborne plant pathogens from four different perspectives. One approach explores the historical, social, and scientific contexts of these pathogens. A second offers a conceptual framework for understanding their biology and control. Another discusses how the interrelationship of principles and practice leads to innovation in management techniques. A fourth section presents studies that investigate recent developments in practical control strategies.

Principles and Practice of Management

The book in its tenth edition has been thoroughly restructured and revised. All the chapters of the present edition have been re-written not only to incorporate the latest developments in management but also to make presentation of subject-matter more lucid and crisp. Chapter 3 of the previous edition (Managers and Environment) has been named as Management Challenges and Opportunities in the present edition so that proper focus is put on these issues. Thus, the present edition is ideally suited to management students as well as management practitioners, particularly those who have not gone through formal management education.

Principles and Standards for Benefit-Cost Analysis

'This book is a superb textbook treatment of benefit–cost analysis. It is well designed for students in public policy, public administration, public health, social work, environmental affairs, law and business.' – John D. Graham, Indiana University, US 'Principles and Standards for Benefit–Cost Analysis is well worth reading. The volume reproduces some chapters previously published online in the Journal of Benefit–Cost Analysis alongside new material that has not yet appeared in print, and does so in a logical and appealing way. Even the several chapters with which I disagreed made me think hard about my own views. And thinking hard is a good thing!' – Paul R. Portney, University of Arizona, US Benefit–cost analysis informs which policies or programs most benefit society when implemented by governments and institutions around the world. This volume brings together leading researchers and practitioners to recommend strategies and standards to improve the consistency and credibility of such analyses, assisting analysts of all types in achieving a greater uniformity of practice. Although new analytical approaches are constantly being used and tested, this book supports the emergence of a professional culture adhering to a set of principles and standards that can be used to identify useful analytical processes and to discard less useful ones. Contributors to this volume come from a wide variety of backgrounds and include authors of leading textbooks, editors of journals, former government officials, and practitioners whose analyses have shaped decisions about education, the environment, security, income distribution, and other vital social and economic policies. Students and professors of public sector economics will find much of interest in this groundbreaking book. Practitioners working in government, non-profit organizations, and international institutions, including welfare economists, policy analysts, environmentalists, engineers, and others will also benefit from this volume's sophisticated and practical recommendations.

Management: Principles and practices

Principles of Management is designed to meet the scope and sequence requirements of the introductory course on management. This is a traditional approach to management using the leading, planning, organizing, and controlling approach. Management is a broad business discipline, and the Principles of Management course covers many management areas such as human resource management and strategic management, as well as behavioral areas such as motivation. No one individual can be an expert in all areas of management, so an additional benefit of this text is that specialists in a variety of areas have authored individual chapters. The BCEAO has conducted a comprehensive reform during the past five years. The regulatory and prudential framework were aligned with international standards and the conditions for supervision have been strengthened, although the efforts must be continued (liquidity ratio/net stable funding ratio and tools for monitoring liquidity, transfers of ownership, acquisitions of holdings, guidelines on nonperforming claims, and anti-money laundering and combating the financing of terrorism—AML-CFT). The transition to Basel III has made it possible to incorporate additional capital requirements, while the rules applicable to credit institutions were upgraded with the 2017 publication of four circulars on governance, risk management, internal supervision, and compliance.

Most of Chester Barnard's career was spent in executive practice. A Mount Hermon and Harvard education, cut off short of the bachelor's degree, was followed by nearly forty years in the American Telephone & Telegraph Company. His career began in the Statistical Department, took him to technical expertness in the economics of rates and administrative experience in the management of commercial operations, and culminated in the presidency of the New Jersey Bell Telephone Company. He was not directly involved in the Western Electric experiments conducted chiefly at the Hawthorne plant in Cicero, but his association with Elton Mayo and the latter's colleagues at the Harvard Business School had an important bearing on his most original ideas. Barnard's executive experience at AT&T was paralleled and followed by a career in public service unusual in his own time and hardly routine today. He was at various times president of the United Services Organization (the USO of World War II), head of the General Education Board and later president of the Rockefeller Foundation (after Raymond Fosdick and before Dean Rusk), chairman of the National Science Foundation, an assistant to the Secretary of the Treasury, a consultant to the American representative in the United Nations Atomic Energy Committee, to name only some of his public interests. He was a director of a number of companies, a fellow of the American Association for the Advancement of Science and of the American Academy of Arts and Sciences. He was a lover of music and a founder of the Bach Society of New Jersey.

Environmental Management in the Australian Minerals and Energy Industries

It seems, at first glance, like an obvious step to take to improve industrial productivity: one should simply watch workers at work in order to learn how they actually do their jobs. But American engineer FREDERICK WINSLOW TAYLOR (1856-1915) broke new ground with this 1919 essay, in which he applied the rigors of scientific observation to such labor as shoveling and bricklaying in order to streamline their work... and bring a sense of logic and practicality to the management of that work. This highly influential book, must-reading for anyone seeking to understand modern management practices, puts lie to such misconceptions that making industrial processes more efficient increases unemployment and that shorter workdays decrease productivity. And it laid the foundations for the discipline of management to be studied, taught, and applied with methodical precision.

Climate change is increasingly of great concern to the world community. The earth has witnessed the buildup of greenhouse gases (GHG) in the atmosphere, changes in biodiversity, and more occurrences of natural disasters. Recently, scientists have begun to shift their emphasis away from curbing carbon dioxide emission to adapting to carbon dioxide emission. The increase in natural disasters around the world is unprecedented in earth's history and these disasters are often associated to climate changes. Many nations along the coastal lines are threatened by massive floods and tsunamis. Earthquakes are increasing in intensity and erosion and droughts are problems in many parts of the developing countries. This book is therefore to investigate ways to prepare and effectively manage these disasters and possibly reduce their impacts. The focus is on mitigation strategies and policies that will help to reduce the impacts of natural disasters. The book takes an in-depth look at climate change and its association to socio-economic development and cultures especially in vulnerable communities; and investigates how communities can develop resilience to disasters. A balanced and a multiple perspective approach to manage the risks associated with natural disasters is offered by engaging authors from the entire globe to proffer solutions.

Demolishing and rebuilding is becoming less and less of an option, and developing trends such as the growth of PFI are directing attention to whole life costing. With the relentless drive towards greater sustainability, proper asset management of the existing infrastructure will become increasingly important in the future. This authoritative book draws together deterioration and repair/remediation with practical asset management. Despite the wealth of information there is a lack of clear guidance on how to carry out a practical assessment of concrete structures and manage repair in the field. Accordingly, this book gives solid practical guidance on assessment, and outlines when and how to act. The focus is on engineering aspects and decision-making, in terms of perspective, procedures and principles, while giving references for matters of detail such as test methods and the mechanisms of deterioration. It links deterioration to deficiencies in design, detailing, materials and construction quality. It then gives examples of how asset management systems have evolved for different types of structure in different countries. It shows how to move forward from inspection and diagnosis, through different methods of damage or structural assessment, to the selection of the optimum method of repair or remedial action. The concept of progressive screening is proposed – that is, only going as far as is necessary to reach a decision with confidence. The author has drawn on over thirty years experience on concrete durability and, in particular, on his involvement in three recent European-funded projects, involving collaboration between the owners of structures and researchers.
