

Perspective In Industrial Geography A Case Study Of An Industrial City Of Uttar Pradesh

[#industrial geography](#) [#Uttar Pradesh industrial development](#) [#industrial city case study](#) [#India urban industrial growth](#) [#regional industrial analysis](#)

This insightful study offers a unique perspective on industrial geography, specifically through a detailed case study of an industrial city within Uttar Pradesh. It critically examines the factors shaping industrial development in India, providing valuable insights into the urban-industrial landscape and regional economic dynamics of this important state.

Perspectives in Industrial Geography

In *Dispossession without Development*, Michael Levien seeks to uncover the structural underpinnings of India's so-called "land wars." He examines how land dispossession changed with India's shift from state-led development to neoliberalism and the consequences of these changes for dispossessed farmers in contemporary India.

Dispossession Without Development

Revision of the author's thesis (Ph. D.--Agra University)

Structural and Functional Changes in the Joint Family System

With special reference to Uttar Pradesh, India.

Calcutta Geographical Review

Records publications acquired from Afghanistan, Bangladesh, Bhutan, India, Maldives, Nepal, Pakistan, and Sri Lanka, by the U.S. Library of Congress Offices in New Delhi, India, and Karachi, Pakistan.

Geography of Transportation

"The authors' analysis of manufacturing plants sampled from India's major industrial centers shows large productivity gaps across cities. The gaps partly reflect differences in agglomeration economies and in market access. However, they are also explained to a greater extent by differences in the degree of labor regulation and in the severity of power shortages. This is an indication that governments can help narrow regional disparities in industrial growth by fostering the "right business environment" in locations where industry might otherwise be held back by powerful forces of economic geography. There

is indeed a pattern in the data whereby geographically disadvantaged cities seem to compensate partially for their natural disadvantage by having a better business environment than more geographically advantaged locations. "--World Bank web site.

Role of SFCs in the Development of Small Scale Industries (SSIs)

The themes of this book include the historical demography of India's urbanization as well as the reproduction and survival of the urban labour force; the economics of the housing and infrastructural-management problems; recruitment and migration of the labour force; and case-studies on the heavy industrial and single-industry cities of India, notably the steel towns, where the interplay of technology and demography takes a peculiar turn.

Bibliography of Asian Studies

Abstract: How do differences in the local business environment influence location of industry within countries? How do the benefits of a good business environment compare with those from good market access and agglomeration economies from industry clustering? The authors examine these questions by analyzing location decisions of individual firms. Using data from a recently completed survey of manufacturing firms in India, they find that both the local business environment and agglomeration economies significantly influence business location choices across cities. In particular, excessive regulation of labor and of other industrial activities reduces the probability of a business locating in a city. The authors' findings imply that in order to attract industrial activity, smaller or remoter cities need to offer even more attractive policy concessions or reforms to offset the effects of their relatively adverse (economic) geography. Their methodology pays special attention to the identification of agglomeration economies in the presence of unobserved sources of natural advantage.

Indian Books Today

The present compendium of 26 papers relates to conceptual and empirical case studies from India and other Asian countries. It also combines an academic understanding with an empirical case studies from India and other Asian countries.

Growth and Regional Pattern of Industrial Complexes

Case study of Ahmadabad, India.

Accessions List, South Asia

Survey of Kanpur, India, conducted from 1954 to 1956. Includes history of the city, economic and social survey, and report of a family planning inquiry.

The Impact of Business Environment and Economic Geography on Plant-level Productivity

During the decade of its existence in India, the multiplex cinema has been very much a sign of the times – both a symptom and a symbol of new social values. Indicative of a consistent push to create a 'globalised' consuming middle class and a new urban environment, multiplex theatres have thus become key sites in the long-running struggle over cultural legitimacy and the right to public space in Indian cities. This book provides the reader with a comprehensive account of the new leisure infrastructure arising at the intersection between contemporary trends in cultural practice and the spatial politics that are reshaping the cities of India. Exploring the significance, and convergence, of economic liberalisation, urban redevelopment and the media explosion in India, the book demonstrates an innovative approach towards the cultural and political economy of leisure in a complex and rapidly-changing society. Key arguments are supported by up-to-date and substantive field research in several major metros and second tier cities across India. Accordingly, this book employs analytical frameworks from Media and Cultural Studies, and from Urban Geography and Development Studies in a wide-ranging examination of the multiplex phenomenon.

Indian Books in Print

A world list of books in the English language.

Changing Face and Challenges of Urbanization

How does economic geography influence industrial production and thereby affect industrial location decisions and the spatial distribution of development? For manufacturing industry, what are the externalities that matter, and to what extent? Are these externalities spatially localized? The authors answer these questions by analyzing the influence of economic geography on the cost structure of manufacturing firms by firm size for eight industry sectors in India. The economic geography factors include market access and local and urban externalities-which are concentrations of own-industry firms, concentrations of buyer-supplier links, and industrial diversity at the district (local) level. The authors find that industrial diversity is the only economic geography variable that has a significant, consistent, and substantial cost-reducing effect for firms, particularly small firms. This finding calls into question the fundamental assumptions regarding localization economies and raises further concerns on the industrial development prospects of lagging regions in developing countries.

Commitment to Work of Industrial Workers

The authors' analysis of manufacturing plants sampled from India's major industrial centers shows large productivity gaps across cities. The gaps partly reflect differences in agglomeration economies and in market access. However, they are also explained to a greater extent by differences in the degree of labor regulation and in the severity of power shortages. This is an indication that governments can help narrow regional disparities in industrial growth by fostering the "right business environment" in locations where industry might otherwise be held back by powerful forces of economic geography. There is indeed a pattern in the data whereby geographically disadvantaged cities seem to compensate partially for their natural disadvantage by having a better business environment than more geographically advantaged locations.

India's Industrial Cities

Chiefly in the Indian context.

Geography In India: Selected Themes

This book investigates the less-explored dimensions of how industries in different Indian subnational spaces or states have responded to the growing phenomenon of internationalization. What factors have influenced firms participating in global business? Have state (both central and provincial) policies acted as catalyst for local firms? Not only does this study delve into these issues; it also painstakingly develops a comprehensive database that remains unique in the absence of reliable official statistics on this subject to date. Efforts have been made to establish a reasonably consistent dataset for the period 1990-2008 derived from the CMIE-PROWESS database. Care has been taken to condense the data and classify it by sector, location, size and ownership. The study delineates export patterns by firm and state and explores factors influencing export decisions according to sector, size and location. A further interesting aspect is the book's critical examination of industrial and trade promotion policies at the state/regional level that might have contributed to or hindered exporting by firms. The states considered for detailed policy discussions are highly diverse and include Gujarat, Odisha and Karnataka. To address the glaring absence of literature on the role of subnational factors in enterprises' export performance, a preliminary state-by-state analysis of the spatial determinants of firms' export activities is also provided.

Bibliographie der Wirtschaftswissenschaften

On the relationship between urbanization and industrialization; covers the period, 1970-71 and 1980-81.

Business Environment, Clustering, and Industry Location

'Made In India' is a definitive account of the geography of industrialization in India. The primary goal is to analyse the consequences of specific policies, and show how policy frameworks need to be changed to achieve a more balanced, equitable, and sustainable industrial growth.

Bibliographie der Staats-und Wirtschaftswissenschaften

Contributed papers on spatial and structural patterns of rural and urban settlements in India.
