Management in Occupational Therapy

My aim in writing this book was to provide a guide to management for student occupational therapists and practitioners in the field. It is not intended to provide an answer to every conceivable management situation. The organization and delivery of health and social services is being subjected to relentless scrutiny and change. Hardly has one proposal been implemented before another one is introduced. In view of this, the thrust of this book is to highlight key points to be addressed when looking at the delivery of occupational therapy services. For this reason, the book starts from the viewpoint of one who is in the early stages of an occupational therapy career through to the position of having to manage the staff in an occupational therapy department service. Following this plan, the book has been organized into two parts. Part One covers issues that an occupational therapist has to confront directly in any job situation. In this situation, she will need to know what is expected of her. Apart from knowing about the various duties, it is necessary to understand the context in which these duties are to be conducted. Hence, there are chapters that discuss professional responsibilities, self-management, standards of practice, and the structure of the two biggest employers of occupational therapists - the NHS and local authority social services departments.

Competence in any profession depends upon an understanding of the theory that underlies it. This concise and practical text for students and practitioners bridges the gap between occupational therapy theory and clinical practice, offering highly practical advice on using theory in practice in a wide range of settings. It considers the nature of professional practice and the need for a sound theoretical basis from which to plan, implement and justify interventions, and investigates the practical use of occupational therapy theory and the issues such use raises in health and social care settings from a European perspective. Every occupational therapy student worldwide needs to know about the underlying theory of their profession and its application to practice. The book particularly debates the nature of the theory of occupational therapy via the introduction of the concept of models of the profession as an umbrella for practice, all of which is brought to life via case studies incorporating expert advice, reflection exercises and assessment and evaluation forms.

Concepts of Occupational Therapy

This practical guide for occupational therapists introduces a tried and tested method for moving from assessment to intervention, by formulating plans and measurable goals using the influential Model of Human occupation (MOHO). Section 1 introduces the concept of formulation – where it comes from, what it involves, why it is important, and how assessment information can be guided by theoretical frameworks and organised into a flowing narrative. Section 2 provides specific instructions for constructing occupational formulations using the Model of Human Occupation. In addition, a radically new way for creating aspirational goals is introduced - based on a simple acronym - which will enable occupational therapists to measure sustained changes rather than single actions. Section 3 presents 20 example occupational formulations and goals, from a wide range of mental health, physical health and learning disability settings, as well as a prison service, and services for homeless people and asylum seekers. Designed for practising occupational therapists and occupational students, this is an essential introduction for all those who are looking for an effective way to formulate plans and goals based on the Model of Human Occupation.

Acute and Chronic Wounds - E-Book

As occupational therapy celebrates its centennial in 2017, attention returns to the profession's founding belief in the value of therapeutic occupations as a way to remediate illness and maintain health. The founders emphasized the importance of establishing a therapeutic relationship with each client and designing an intervention plan based on the knowledge about a client's context and environment, values, goals, and needs. Using today's lexicon, the profession's founders proposed a vision for the profession that was occupation based, client centered, and evidence based--the vision articulated in the third edition of the *Occupational Therapy Practice Framework: Domain and Process*. The Framework is a must-have official document from the American Occupational Therapy Association. Intended for occupational therapy practitioners and students, other health care professionals, educators, researchers, payers, and consumers, the Framework summarizes the interrelated constructs that describe occupational therapy practice. In addition to the creation of a new preface to set the tone for the work, this new edition includes the following highlights: a redefinition of the overarching statement describing occupational therapy's domain; a new definition of clients that includes persons, groups, and populations; further delineation of the profession's relationship to organizations; inclusion of activity demands as part of the process; and even more up-to-date analysis and guidance for today's occupational therapy practitioners. Achieving health, well-being, and participation in life through engagement in occupation is the overarching statement that describes the domain and process of occupational therapy in the fullest sense. The Framework can provide the structure and guidance that practitioners can use to meet this important goal.
