From Egg to Frog in 7 Weeks! - From Egg to Frog in 7 Weeks! by NatureNorth 8,632,483 views 9 years ago 6 minutes, 58 seconds - The development of Wood **Frog**, (*Lithobates sylvaticus*) eggs to froglets in 49 days, just 7 weeks!

By the end of the day the eggs were already developing. Notice the lines where cell division is occurring.

Egg development has reached the "neural folds" stage. This is the start of the spinal cord and brain. Lots more have hatched, but many remain undeveloped.

The early hatchlings are developing tail fins.

Tadpoles are becoming more active. Gills and suction pads beneath the mouth are still visible.

Gills are no longer visible and the tadpoles are swimming actively.

The aquarium is a busy full of active tadpoles. I removed the undeveloped eggs to keep things cleaner.

On the larger tadpoles the hind limb buds are visible.

Day 44 - Here's a good look at a large tadpole's mouth parts.

Fully formed front legs break through the skin and the body shape becomes frog-like.

Atom Section, Defining Review, Atom Structure, Scientific Review, Chemistry Concepts

This review delves into the defining characteristics of an atom section, exploring its fundamental components and their roles. We aim to provide a comprehensive understanding of atom sections and offer definitive answers to frequently asked questions, solidifying your knowledge in this critical area of scientific study. This review will enhance comprehension of the core concepts.
