A History of Information Storage and Retrieval

Throughout history, humans have sought ways not only to acquire but to preserve knowledge. From when to plant crops to who begat whom, even the earliest people worked to gather and store information. Today, computers and other technologies have almost completely changed the world of information access and storage. This history traces the development of knowledge-collecting from early humans, whose minds served as repositories of culture and lore, through the first libraries and encyclopedias, to the many advances of the twentieth century. Ironically it is with these latest advances that the preservation of knowledge has foundered. For example, CD-ROMs can last no doubt for decades--but the software programs that run them will not, because they are constantly being upgraded. Both well-known and obscure pieces of the information story are explored in this work. From Diderot's encyclopedia, to anonymous librarians of the ancient world, the people who created information storage systems and the systems themselves are all presented. Fully indexed.

Psychogenic nonepileptic seizures (PNES) are attacks that mimic epileptic seizures, but are not caused by abnormal electrical discharges in the brain. Instead, PNES are typically considered involuntary expressions of distress, making diagnosis and treatment a challenge. Historically, patients are referred to neurologists who, after completing a diagnostic work up, refer patients to mental health professionals, including psychiatrists, for treatment. For a number of reasons, this transition of care between specialists is often not successful, and this impacts patient treatment and outcomes. Psychogenic Nonepileptic Seizures: Toward the Integration of Care offers new insights into the practical diagnostic and treatment challenges faced by clinicians who manage this condition. This book covers the different stages of care, from the initial evaluation to long-term outcomes, and highlights the need to work collaboratively to provide patients with comprehensive care and improved outcomes. It provides up-to-date evidence and shares clinical expertise for the management of this challenging diagnosis that requires the expertise of a multi-disciplinary team. The authors provide a new framework on how to conceptualize and manage this disorder to more effectively address the needs of patients.

The Certified Manager of Quality/Organizational Excellence Handbook, Fourth Edition

Chapter 1 places into perspective a total Information Storage and Retrieval System. This perspective introduces new challenges to the problems that need to be theoretically addressed and commercially implemented. Ten years ago commercial implementation of the algorithms being developed was not realistic, allowing theoreticians to limit their focus to very specific areas. Bounding a problem is still essential in deriving theoretical results. But the commercialization and insertion of this technology into systems like the Internet that are widely being used changes the way problems are bounded. From a theoretical perspective, efficient scalability of algorithms to systems with gigabytes and terabytes of data, operating with minimal user search statement information, and making maximum use of all functional aspects of an information system need to be considered. The dissemination systems using persistent indexes or mail files to modify ranking algorithms and combining the search of structured information fields and free text into a consolidated weighted output are examples of potential new areas of investigation. The best way for the theoretician or the commercial developer to understand the importance of problems to be solved is to place them in the context of a total vision of a complete system. Understanding the differences between Digital Libraries and Information Retrieval Systems will add an additional dimension to the potential future development of systems. The collaborative aspects of digital libraries can be viewed as a new source of information that dynamically could interact with information retrieval techniques.
