Translation: Theory and Practice in Dialogue

This exciting new book explores the present relevance of translation theory to practice. A range of perspectives provides both current theoretical insights into the relevance of theory to translation and also offers first-hand experiences of applying appropriate strategies and methods to the practice and description of translation. The individual chapters in the book explore theoretical pronouncements and practical observations grouped in topics that include theory and creativity, translation and its relation with linguistics, gender issues and more. The book features four parts: it firstly deals with how theories from both within translation studies and from other disciplines can contribute to our understanding of the practice of translation; secondly, how theory can be reconceptualized from examining translation in practice; thirdly reconceptualizing practice from theory; and finally Eastern European and Asian perspectives of how translation theory and practice inform one another. The chapters all show examples from theoretical and practical as well as pedagogical issues ensuring appeal for a wide readership. This book will appeal to advanced level students, researchers and academics in translation studies.

Translation: Theory and Practice in Dialogue

The chapters all show examples from theoretical and practical as well as pedagogical issues ensuring appeal for a wide readership. This book will appeal to advanced level students, researchers and academics in translation studies.

Dialogues on the Theory and Practice of Literary Translation

The book is a collection of the dialogues between Xu Jun, a well-known expert in French literary translation and eminent “Changjiang” scholar in translation studies in China, and some celebrated literary translators in contemporary China, some of whom are also literary scholars, linguists, poets, prose writers, and editors. It is a fundamental achievement of research on the literary translation in the 20th century in China, involving multiple literary types, such as novels, poetry, dramas, prose, and fairy tales; and multiple languages, such as English, French, German, Russian, Italian, Spanish, Japanese, and Sanskrit. The dialogues are centered on fundamental issues in the theory and practice of literary translation, such as re-creation in literary translation, the relationship between form and content in literary translation, the subjectivity of literary translators, literary translation standards and principles, the gains and losses in literary translation, the principles and methods of literary criticism, and so on.

Those translation experts' experience and multiple strategies not only play an active role in guiding literary translators in practice but also benefit theoretical development in literary translation. Thus, the book will contribute to worldwide translation studies and get well recognized by translation studies students, teachers, and scholars in the world.

Translation : Theory and Practice, tension and Interdependence

The book is a collection of the dialogues between Xu Jun and some celebrated literary translators in contemporary China, involving multiple literary types, such as novels, poetry, dramas, prose, and fairy tales, and multiple languages, such as English, French, German.

Dialogues on the Theory and Practice of Literary Translation

Can Theory Help Translators? is a dialogue between a theoretical scholar and a professional translator, about the usefulness (if any) of translation theory. The authors argue about the problem of the translator's identity, the history of the translator's role, the translator's visibility, translation types and strategies, translation quality, ethics and translation aids.

Can Theory Help Translators?

Drawing upon convergences between translation studies and foreign and second language (L2) didactics that have emerged as a result of recent research, this volume continues the dialogue between the two disciplines by allowing for epistemological two-way traffic, marrying established, yet so far unrelated or under-researched, conceptual approaches, and disseminating innovative scientific evidence from different continents. A unique feature of the volume is the sub-section presenting the most recent empirical studies in the development of linguistic and other professional competences for translators, with suggestions for re(de)fining translation curricula. The contributors to this volume include representatives of various spheres, including academics, researchers and practitioners. Their underlying theoretical and empirical research is informed by multiple perspectives: linguistics, didactics, and translation-related. This book shows how integrating insights from translation studies into language teaching and vice versa can effectively respond to the challenges of contemporary language and translator teaching and training.

Translation and Language Teaching

Translation: Theory and Practice: A Historical Reader responds to the need for a collection of primary texts on translation, in the English tradition, from the earliest times to the present day. Based on an exhaustive survey of the wealth of available materials, the Reader demonstrates throughout the link between theory and practice, with excerpts not only of significant theoretical writings but of actual translations, as well as excerpts on translation from letters, interviews, autobiographies, and fiction. The collection is intended as a teaching tool, but also as an encyclopaedia for the use of translators and writers on translation. It presents the full panoply of approaches to translation, without necessarily judging between them, but showing clearly what is to be gained or lost in each case. Translations of key texts, such as the Bible and the Homeric epic, are traced through the ages, with the same passages excerpted, making it possible for readers to construct their own map of the evolution of translation and to evaluate, in their historical contexts, the variety of approaches. The passages in question are also accompanied by ad verbum versions, to facilitate comparison. The bibliographies are likewise comprehensive. The editors have drawn on the expertise of leading scholars in the field, including the late James S. Holmes, Louis Kelly, Jonathan Wilcox, Jane Stevenson, David Hopkins, and many others. In addition, significant non-English texts, such as Martin Luther's "Circular Letter on Translation," which may be said to have inaugurated the Reformation, are included, helping to set the English tradition in a wider context. Related items, such as the introductions to their work by Tudor and Jacobean translators or the work of women translators from the sixteenth to eighteenth centuries have been brought together in "collages," marking particularly important moments or developments in the history of translation. This comprehensive reader provides an invaluable and illuminating resource for scholars and students of translation and English literature, as well as poets, cultural historians, and professional translators.

Translation

Dialogue interpreting includes what is variously referred to in English as Community, Public Service, Liaison, Ad Hoc or Bilateral Interpreting - the defining characteristic being interpreter-mediated

communication in spontaneous face-to-face interaction. Included under this heading are all kinds of professional encounters: police, immigration and welfare services interviews, doctor-patient interviews, business negotiations, political interviews, lawyer-client and courtroom interpreting and so on. Whereas research into conference interpreting is now well established, the investigation of dialogue interpreting as a professional activity is still in its infancy, despite some highly promising publications in recent years. This special issue of *The Translator*, guest-edited by one of the leading scholars in translation studies, provides a forum for bringing together separate strands within this developing field and should create an impetus for further research. Viewing the interpreter as a gatekeeper, coordinator and negotiator of meanings within a three-way interaction, the descriptive studies included in this volume focus on issues such as role-conflict, in-group loyalties, participation status, relevance and the negotiation of face, thus linking the observation of interpreting practice to pragmatic constraints such as power, distance and face-threat and to semiotic constraints such as genres and discourses as socio-textual practices of particular cultural communities.

Dialogue Interpreting

Routledge Interpreting Guides cover the key settings or domains of interpreting and equip trainee interpreters and students of interpreting with the skills needed in each area of the field. Concise, accessible and written by leading authorities, they include examples from existing interpreting practice, activities, further reading suggestions and a glossary of key terms. Drawing on recent peer-reviewed research in interpreting studies and related disciplines, *Dialogue Interpreting* helps practising interpreters, students and instructors of interpreting to navigate their way through what is fast becoming the very expansive field of dialogue interpreting in more traditional domains, such as legal and medical, and in areas where new needs of language brokerage are only beginning to be identified, such as asylum, education, social care and faith. Innovative in its approach, this guide places emphasis on collaborative dimensions in the wider institutional and organizational setting in each of the domains covered, and on understanding services in the context of local communities. The authors propose solutions to real-life problems based on knowledge of domain-specific practices and protocols, as well as inviting discussion on existing standards of practice for interpreters. Key features include: contextualized examples and case studies reinforced by voices from the field, such as the views of managers of language services and the publications of professional associations. These allow readers to evaluate appropriate responses in relation to their particular geo-national contexts of practice and personal experience activities to support the structured development of research skills, interpreter performance and team-work. These can be used either in-class or as self-guided or collaborative learning and are supplemented by materials on the Translation Studies Portal a glossary of key terms and pointers to resources for further development. *Dialogue Interpreting* is an essential guide for practising interpreters and for all students of interpreting within advanced undergraduate and postgraduate/graduate programmes in Translation and Interpreting Studies, Modern Languages, Applied Linguistics and Intercultural Communication.

Dialogue Across Languages

This volume offers a collection of original articles on the teaching of translation and interpreting, responding to the increased interest in this area not only within translation and interpreting studies but also in related fields. It contains empirical, theoretical and state-of-the-art original pieces that address issues relevant to translation and interpreting pedagogy, such as epistemology, technology, language proficiency, and pedagogical approaches (e.g., game-based, task-based). All of the contributors are researchers and educators of either translation or interpreting – or both. The volume should be of interest to researchers and teachers of translation and interpreting, second language acquisition and language for specific purposes. An introduction by the editors – both distinguished scholars in translation & interpreting pedagogy – provides the necessary context for the contributions. Originally published as a special issue of *Translation and Interpreting Studies* 10:1 (2015), edited by Brian James Baer and Christopher D. Mellinger.

Dialogue Interpreting

This volume offers a comprehensive, multilingual approach to the practice and profession of translation and interpretation as shaped by global markets, advanced technologies and digital literacy. It offers a joint, scholarly-pedagogical, practice-oriented perspective taking stock of recent developments and topical concerns in the field. The book provides a transdisciplinary overview of multilingualism as a phenomenon inextricably connected with the global condition of the subject, with emphasis

on cross-cultural communication and the professions of translation and interpretation. As such, it constitutes an accessible and productive pedagogical resource.

Translation and Interpreting Pedagogy in Dialogue with Other Disciplines

This interdisciplinary collection of essays explores ways in which post-colonial theory interconnects with translation studies. The issues examined here include Brazilian cannibalistic theories in literary transfer.

The Translator, the Interpreter and the Dialogue of Languages in the Digital Age

The process of translation. Drawing on experience: how being a translator is more than just being good at languages. Starting with people: social interaction as the first key focus of translator's experience of the world ...

Post-colonial Translation

In *Translation Changes Everything* leading theorist Lawrence Venuti gathers fourteen of his incisive essays since 2000. The selection sketches the trajectory of his thinking about translation while engaging with the main trends in research and commentary. The issues covered include basic concepts like equivalence, retranslation, and reader reception; sociological topics like the impact of translations in the academy and the global cultural economy; and philosophical problems such as the translator's unconscious and translation ethics. Every essay presents case studies that include Venuti's own translation projects, illuminating the connections between theoretical concepts and verbal choices. The texts, drawn from a broad variety of languages, are both humanistic and pragmatic, encompassing such forms as poems and novels, religious and philosophical works, travel guidebooks and advertisements. The discussions all explore practical applications, whether writing, publishing, reviewing, teaching or studying translations. Venuti's aim is to conceive of translation as an interpretive act with far-reaching social effects, at once enabled and constrained by specific cultural situations. This latest chapter in his developing work is essential reading for translators and students of translation alike.

Becoming a Translator

Translation and Practice Theory is a timely and theoretically innovative study linking professional practice and translation theory, showing the usefulness of a practice-theoretical approach in addressing some of the challenges that the professional world of translation is currently facing, including, for example, the increasing deployment of machine translation. Focusing on the key aspects of translation practices, Olohan provides the reader with an in-depth understanding of how those practices are performed, as translators interact with people, technologies and other material resources in the translation workplace. The practice-theoretical perspective helps to describe and explain the socio-material complexities of present-day commercial translation practice but also offers a productive approach for studies of translation and interpreting practices in other settings and periods. This first book-length exploration of translation through the lens of practice theory is key reading for advanced students and researchers of Translation Theory. It will also be of interest in the area of professional communication within Communication Studies and Applied Linguistics.

Translation Changes Everything

"Testing and Assessment in Translation and Interpreting Studies" examines issues of measurement that are essential to translation and interpreting. Conceptualizing testing both as a process and a product, the collection of papers explores these issues across languages and settings (including university classrooms, research projects, the private sector, and professional associations). The authors have approached their chapters from different perspectives using a variety of methods, some focusing on very specific variables, and others providing a much broader overview of the issues at hand. Chapters range from a discussion of the measurement of text cohesion in translation; the measurement of interactional competence in interpreting; the use of a particular scale to measure interpreters' renditions to the application of a specific approach to grading or general program assessment (such as interpreter or translator certification at the national level or program admissions processes). These studies point to the need for greater integration of research and practice in the specific area of testing and assessment and are a welcome addition to the field."

Translation and Practice Theory

This is a book about the teaching and particularly the acquisition of translation-related skills and knowledge. Well grounded in theory, the book also provides numerous examples drawn from the author's extensive classroom experience in translator education and foreign language teaching. Kiraly uses a number of classroom case studies to illustrate his method, including: introductory courses in translation studies, project-based translation practice courses, translation studies seminars, as well as naturalistic foreign language learning classes for student translators. The book is primarily geared toward translator educators and programme administrators, as well as students of translation, and will also be of interest to foreign language teachers who incorporate translation into their teaching, to translation scholars, and to others involved in the world of translation.

Testing and Assessment in Translation and Interpreting Studies

"The Theory and Practice of Translation," first published in 1982 and a companion work to "Toward a Science of Translating" (Brill, 1964), analyses and describes the set of processes involved in translating. Bible translating, the focus of this work, offers a unique subject for such a study, as it has an exceptionally long history, involves more than 2,000 languages, a vast range of cultures and a broader range of literary structures than any other type of translating. Not only of interest to Biblical scholars, therefore, this work explores issues of textual meanings and the procedures for communicating these meanings into other languages and cultures.

A Social Constructivist Approach to Translator Education

Originally published in different journals and collected volumes, these papers in conceptual analysis cover some central topics in translation theory and research: types of theory and hypothesis; causality and explanation; norms, strategies and so-called universals; translation sociology, and ethics. There are critical reviews of Catford's theory, and of Skopos theory, and of Kundera's views on literary translation, and detailed analyses of the literal translation hypothesis and the unique items hypothesis. The methodological discussions, which draw on work in the philosophy of science, will be of special relevance to younger researchers, for example those starting work on a doctorate. Some of the arguments and positions defended – for instance on the significant status of conceptual, interpretive hypotheses, and the ideal of consilience – relate to wider ongoing debates, and will interest any scholar who is concerned about the increasing fragmentation of the field and about the future of Translation Studies. Let the dialogue continue!

The Theory and Practice of Translation

Preeminent in a relatively rare category of separate early modern treatises on translation, the 1683 *De optimo genere interpretandi* by the polymath cleric Pierre-Daniel Huet (1630-1721) offers a concise introduction to its nature, history, theory, process and practice. Written in the form of a Ciceronian dialogue, *On the best kind of translating* not only represents Huet's acute and witty defence of the often disparaged literal or word for word model, but also provides illuminating glimpses into the critical and interpretive methods of his age. A guiding premise of this first modern edition and annotated translation of Huet's entire treatise is that, now as then, translation theory and practice are complementaries. Consistent also with this premise is the conscious attempt by DeLater to apply Huet's literal translation model at every stage in the process of producing this annotated translation of his treatise. Among the topics treated in Huet's work are: (1) a definition of translation and its relationship to interpretation; (2) adaptation of translation aims and methods to the subject matter of the original; (3) the translating and glossing of idioms, proverbs, metaphors, puns and ambiguities; (4) translators' priorities, from sense and words to the elusive quality that makes a translation seem an original work; and (5) translation as an independent theoretical discipline. In addition to providing an introduction to Huet's life and works as well as explanatory glosses for his copious sources and various topics in the DOGI, the present work also supplies links between Huet's work and that of current theorists and critics in the field of translation studies.

Reflections on Translation Theory

This book argues that the subjective evaluation of the product must give way to a descriptive and objective attempt to reveal the workings of the process (ie translating). Without such a shift, translation

theory will continue outside the mainstream of intellectual activity in human sciences and fail to take its rightful place as a major field in applied Linguistics.

Translation Theory in the Age of Louis XIV

Translation for the theatre is often considered to hold a marginal status between literary translation and adaptation for the stage. As a result, this book argues that studies of this complex activity tend to take either a textual or performative approach. After exploring the history of translation theory through these lenses, Massimiliano Morini proposes a more totalizing view of 'theatre translation' as the sum of operations required to transform one theatre act into another, and analyses three complex Western case histories in light of this all-encompassing definition. Combining theory with practice, Morini investigates how traditional ideas on translation – from Plautus and Cicero to the early 20th century – have been applied in the theatrical domain. He then compares and contrasts the inherently textual viewpoint of post-humanistic translators with the more performative approaches of contemporary theatrical practitioners, and chronicles the rise of performative views in the third millennium. Positioning itself at the intersection of past and present, as well as translation studies and theatre semiotics, *Theatre Translation* provides a full diachronic survey of an age-old activity and a burgeoning academic field.

Translation and Translating

This book is a collection of selected articles based on talks given by established academics and translators, as well as younger researchers, at the third postgraduate symposium organized by the School of Literature and Creative Writing at the University of East Anglia, UK. The objective of the third postgraduate translation symposium at the University of East Anglia was to explore the current relevance of theory to the practice of translation. This volume builds on the key ideas and discussion that arose from the symposium, bringing together, amongst others, the current debates concerning the complex relationship between theory and practice in the field of translation studies, taking into consideration a wide range of perspectives, both modern and traditional. A broad cross-section of research exploring the present relevance of translation theory to practice is presented by many of the individual contributors to this volume. These papers provide both current theoretical insights into the relevance of theory to translation and also, in some examples, offer first-hand experiences of applying appropriate strategies and methods to the practice and description of translation.

Theatre Translation

This book gathers together for the first time the editors of some of the most prestigious Translation Studies journals, and serves as a showcase of the academic and geographical diversity of the discipline. The collection includes a discussion on the intralinguistic translation of *Romeo and Juliet*; thoughts on the concepts of adaptation, imitation and pastiche with regards to Japanese manga; reflections on the status of the source and target texts; a study on the translation and circulation of Inuit-Canadian literature; and a discussion on the role of translation in Latin America. It also contains two chapters on journalistic translation – linguistic approaches to English-Hungarian news translation, and a study of an independent news outlet; one chapter on court interpreting in the US and a final chapter on audio-description. The book was originally published as a special issue in 2017 to mark the twenty-fifth anniversary of *Perspectives: Studies in Translation Theory and Practice*.

Thinking Translation: Perspectives from Within and Without

Presents the most important theories in Translation Studies that have emerged over the last 50 years. Particularly innovative is the inclusion of theories from outside North America and Europe, theoretical perspectives on recent technological developments and a consideration of the nature of theory in the field.

Contemporary Approaches to Translation Theory and Practice

This collection seeks to expand the centers from which scholars theorize translation, building on themes in Rosemary Arrojo's pioneering work on transfiction and the influence of bordering disciplines in investigating and elucidating questions central to the field of translation studies. Chapters by scholars around the world theorize translation from diverse perspectives, drawing on a wide range of literatures, genres, and media, including fiction, philosophy, drama, and film. Half the chapters explore the influence

of Rosemary Arrojo's work on transfiction and the ways in which fictional representations of translators and translation can shed new light on theoretical concerns. The other chapters look to fields outside translation studies, such as linguistics, media studies, and philosophy, to demonstrate the ways in which the key thinkers and theories that have influenced Arrojo's work can be seen in other disciplines and in turn, encourage further cross-disciplinary research interrogating key questions in the field. The collection makes the case for a multi-layered approach to theorizing translation, one which accounts for the rich possibilities in revisiting existing work and thinking outside disciplinary boundaries in order to advance the field. This book will be of interest to students and scholars in translation studies and comparative literature.

Theories of Translation

Praise for the previous edition of the Encyclopedia of Translation Studies: 'Translation has long deserved this sort of treatment. Appropriate for any college or university library supporting a program in linguistics, this is vital in those institutions that train students to become translators.' – Rettig on Reference 'Congratulations should be given to Mona Baker for undertaking such a mammoth task and...successfully pulling it off. It will certainly be an essential reference book and starting point for anyone interested in translation studies.' – ITI Bulletin 'This excellent volume is to be commended for bringing together some of [its] most recent research. It provides a series of extremely useful short histories, quite unlike anything that can be found elsewhere. University teachers will find it invaluable for preparing seminars and it will be widely used by students.' – The Times Higher Education Supplement '... a pioneering work of reference ...' – Perspectives on Translation The Routledge Encyclopedia of Translation Studies has been the standard reference in the field since it first appeared in 1998. The second, extensively revised and extended edition brings this unique resource up-to-date and offers a thorough, critical and authoritative account of one of the fastest growing disciplines in the humanities. The Encyclopedia is divided into two parts and alphabetically ordered for ease of reference. Part One (General) covers the conceptual framework and core concerns of the discipline. Categories of entries include: central issues in translation theory (e.g. equivalence, translatability, unit of translation) key concepts (e.g. culture, norms, ethics, ideology, shifts, quality) approaches to translation and interpreting (e.g. sociological, linguistic, functionalist) types of translation (e.g. literary, audiovisual, scientific and technical) types of interpreting (e.g. signed language, dialogue, court). New additions in this section include entries on globalisation, mobility, localization, gender and sexuality, censorship, comics, advertising and retranslation, among many others. Part Two (History and Traditions) covers the history of translation in major linguistic and cultural communities. It is arranged alphabetically by linguistic region. There are entries on a wide range of languages which include Russian, French, Arabic, Japanese, Chinese and Finnish, and regions including Brazil, Canada and India. Many of the entries in this section are based on hitherto unpublished research. This section includes one new entry: Southeast Asian tradition. Drawing on the expertise of over 90 contributors from 30 countries and an international panel of consultant editors, this volume offers a comprehensive overview of translation studies as an academic discipline and anticipates new directions in the field. The contributors examine various forms of translation and interpreting as they are practised by professionals today, in addition to research topics, theoretical issues and the history of translation in various parts of the world. With key terms defined and discussed in context, a full index, extensive cross-references, diagrams and a full bibliography the Routledge Encyclopedia of Translation Studies is an invaluable reference work for all students and teachers of translation, interpreting, and literary and social theory. Mona Baker is Professor of Translation Studies at the University of Manchester, UK. She is co-founder and editorial director of St Jerome Publishing, a small press specializing in translation studies and cross-cultural communication. Apart from numerous papers in scholarly journals and collected volumes, she is author of *In Other Words: A Coursebook on Translation* (Routledge 1992), *Translation and Conflict: A Narrative Account* (2006) and *Founding Editor of The Translator: Studies in Intercultural Communication* (1995), a refereed international journal published by St Jerome since 1995. She is also co-Vice President of the International Association of Translation and Intercultural Studies (IATIS). Gabriela Saldanha is Lecturer in Translation Studies at the University of Birmingham, UK. She is founding editor (with Marion Winters) and current member of the editorial board of *New Voices in Translation Studies*, a refereed online journal of the International Association of Translation and Intercultural Studies, and co-editor (with Federico Zanettin) of *Translation Studies Abstracts and Bibliography of Translation Studies*.

Transfiction and Bordering Approaches to Theorizing Translation

Jirí Levý's seminal work, *The Art of Translation*, considered a timeless classic in Translation Studies, is now available in English. Having drawn on adjacent disciplines, the methodology of Czech functional sociosemiotic structuralism and the state-of-the art in the West, Levý synthesized his findings and experience in the field presenting them in a reader-friendly book, which combines the approaches of a theoretician, systemic analyst, historian, critic, teacher, practitioner and populariser. Although focused on literary translation from theoretical, descriptive and historical perspectives, it presents a conceptualization of a general theory, addressing a number of issues discussed today. The 'practical' mission of the book as a theory extending to practice is based on the same historical-dialectic affinity of methods, norms, functions and values, accounting for the translator's agency and other contextual agents involved in the communication process. The book will be useful to translators, researchers, students and teachers in Translation and Literary Studies.

Routledge Encyclopedia of Translation Studies

This volume offers a snapshot of current perspectives on translation studies within the specific historical and socio-cultural framework of Anglo-Italian relations. It addresses research questions relevant to English historical, literary, cultural and language studies, as well as empirical translation studies. The book is divided into four chapters, each covering a specific research area in the scholarly field of translation studies: namely, historiography, literary translation, specialized translation and multimodality. Each case study selected for this volume has been conducted with critical insight and methodological rigour, and makes a valuable contribution to scientific knowledge in the descriptive and applied branches of a discipline that, since its foundation nearly 50 years ago, has concerned itself with the description, theory and practice of translating and interpreting.

The Art of Translation

This is about people, not texts – a translator ethics seeks to embrace the intercultural identity of the translatory subject, in its full array of possible actions. Based on seminars originally given at the Collège International de Philosophie in Paris, this translation from French has been fully revised by the author and extended to include critical commentaries on activist translation theory, non-professional translation, interventionist practices, and the impact of new translation technologies. The result takes the traditional discussion of ethics into the way mediators can actively create cooperation between cultures, while at the same time addressing very practical questions such as when one should translate or not translate, how much translators should charge, or whose side they should be on. *On Translator Ethics* offers a point of reference for the key debates in contemporary Translation Studies.

Recent Trends in Translation Studies

In the past decades, translation studies have increasingly focused on the ethical dimension of translational activity, with an emphasis on reflexivity to assert the role of the researcher in highlighting issues of visibility, creativity and ethics. In *Reflexive Translation Studies*, Silvia Kadiu investigates the viability of theories that seek to empower translation by making visible its transformative dimension; for example, by championing the visibility of the translating subject, the translator's right to creativity, the supremacy of human translation or an autonomous study of translation. Inspired by Derrida's deconstructive thinking, Kadiu presents practical ways of challenging theories that argue reflexivity is the only way of developing an ethical translation. She questions the capacity of reflexivity to counteract the power relations at play in translation (between minor and dominant languages, for example) and problematises affirmative claims about (self-)knowledge by using translation itself as a process of critical reflection. In exploring the interaction between form and content, *Reflexive Translation Studies* promotes the need for an experimental, multi-sensory and intuitive practice, which invites students, scholars and practitioners alike to engage with theory productively and creatively through translation.

On Translator Ethics

Where Theory and Practice Meet is a collection of nineteen papers in translation studies. Unlike many similar books published in recent decades, which are mostly non-translation-oriented, veering to issues with little or no relevance to translation, this book focuses on the translation process, on theory formulation with reference to actual translation, on getting to grips with translation problems, and on explaining translation in language which can be understood by the general reader. Perceptive and wide-ranging, the book covers language pairs that include Chinese, English, French, German, Italian, Spanish, Latin, and Classical Greek, and discusses, among other things, translations of Dante's

La Divina Commedia; translations of Shakespeare's Hamlet; Goethe's "Prometheus" as a case of untranslatability; the challenge of translating Garcilaso de la Vega's "Primera Égloga" into Chinese; John Minford's translation of martial arts fiction; and Lin Shu's translation of Alexandre Dumas's *La Dame aux camélias*.

Reflexive Translation Studies

Selected papers from the Third Language International Conference on Translator and Interpreter Training. Capping the series of conferences on this theme in Denmark, the present volume brings together a choice selection of the papers read by scholars and teachers from five continents and within all specialities in Translation Studies. In combination with the two previous volumes of the same title, the book offers an up-to-date, comprehensive, representative overview focusing on main issues in teaching in the relatively new field of translation. There are informed and incisive discussions of subtitling, interpreting and translation, spanning from its historical beginnings to presentations of machine translation and predictions of the future of translation work. Contributions ranging from discussions on the interplay between theory and teaching, teaching literary translation, introducing students to central issues in translation practice, and historical and social issues in teaching translation.

Where Theory and Practice Meet

This volume concerns the role and nature of translation in global politics. Through the establishment of trade routes, the encounter with the 'New World', and the circulation of concepts and norms across global space, meaning making and social connections have unfolded through practices of translating. While translation is core to international relations it has been relatively neglected in the discipline of International Relations. The Politics of Translation in International Relations remedies this neglect to suggest an understanding of translation that transcends language to encompass a broad range of recurrent social and political practices. The volume provides a wide variety of case studies, including financial regulation, gender training programs, and grassroots movements. Contributors situate the politics of translation in the theoretical and methodological landscape of International Relations, encompassing feminist theory, de- and post-colonial theory, hermeneutics, post-structuralism, critical constructivism, semiotics, conceptual history, actor-network theory and translation studies. The Politics of Translation in International Relations furthers and intensifies a cross-disciplinary dialogue on how translation makes international relations.

Teaching Translation and Interpreting 3

Since the 1970s, the field of Translation Studies has entered into dialogue with an array of other disciplines, sustaining a close but contentious relationship with literary translation. At Translation's Edge expands this interdisciplinary dialogue by taking up questions of translation across sub-fields and within disciplines, including film and media studies, comparative literature, history, and education among others. For the contributors to this volume, translation is understood in its most expansive, transdisciplinary sense: translation as exchange, migration, and mobility, including cross-cultural communication and media circulation. Whether exploring the Universal Declaration of Human Rights or silent film intertitles, this volume brings together the work of scholars aiming to address the edges of Translation Studies while engaging with major and minor languages, colonial and post-colonial studies, feminism and disability studies, and theories of globalization and empire.

The Politics of Translation in International Relations

This volume on Transfiction (understood as an aestheticized imagination of translatorial action) recognizes the power of fiction as a vital and pulsating academic resource, and in doing so helps expand the breadth and depth of TS. The book covers a selection of peer-reviewed papers from the 1st International Conference on Fictional Translators and Interpreters in Literature and Film (held at the University of Vienna, Austria in 2011) and links literary and cinematic works of translation fiction to state-of-the-art translation theory and practice. It presents not just a mixed bag of cutting-edge views and perspectives, but great care has been taken to turn it into a well-rounded transficcionario with a fluid dialogue among its 22 chapters. Its investigation of translatorial action in the mirror of fiction (i.e. beyond the cognitive barrier of 'fact') and its multiple transdisciplinary trajectories make for thought-provoking readings in TS, comparative literature, as well as foreign language and literature courses.

At Translation's Edge

'Intercultural dialogue', as a concept and ideology in the European Union, stimulates a rational 21st century society where people can engage in (intercultural) communication on a global scale, and can do so openly and freely in conditions of security and mutual respect. Intercultural dialogue connotes dialogic communication that is peaceful, reconciliatory, and democratic. Yet the term and its accompanying rhetoric belie the intercultural communicative undercurrents and their manifestations that people encounter in their daily lives. The research-informed chapters in this book, which are situated in international contexts, provide more nuanced understandings, and many even challenge this non-critical ideology by suggesting that the concept of intercultural dialogue is inoperable and problematic under the present conditions of globalisation and migration, where there exists conflict, vulnerability, and instability. The different theoretical perspectives and analyses presented by the authors are a reminder that researchers in the field of intercultural communication require robust and appropriate theories, methods, and pedagogies in order to research these complex conditions and contexts, particularly where different languages and identities are present. The book is also a reminder of how context and power both (re)shape and contest the central tenets of intercultural dialogue—in particular, of who speaks for whom, when, how, and under what circumstances and conditions. This book was originally published as a special issue of *Language and Intercultural Communication*.

Transfiction

Teaching students the core skills of becoming a translator, this fully revised second edition has been updated throughout to include an exploration of new technologies used by translators and a 'Useful Contacts' section detailing key organizations.
