Index to Literature on the American Indian, 1973

"James Ruppert explores the bicultural nature of Indian writers and discusses strategies they employ in addressing several audiences at once: their tribe, other Indians, and other Americans. Helen Jaskoski analyzes the genre of autoethnography, or Indian historical writing, in an Ottawa writer's account of a smallpox epidemic. Kimberly Blaeser, a Chippewa, writes about how Indian writers reappropriate their history and stories of their land and people. Robert Allen Warrior, an Osage, examines the ideas of the leading Indian philosopher in America, Vine Deloria, Jr., who calls for a return to traditional tribal religions. Robert Berner exposes the incomplete myths and false legends pervading Indian views of American history. Alan Velie discusses the issue of historical objectivity in two Indian historical novels, James Welch's *Fools Crow* and Gerald Vizenor's *The Heirs of Columbus*. Kurt M. Peters relates how Laguna Indians retained their culture and identity while living in the boxcars of the Santa Fe Railroad Indian Village at Richmond, California. Juana Maria Rodriguez examines power relations in Gerald Vizenor's narrative of a Dakota Indian accused of murder in 1967, "Thomas White Hawk." Finally, Gerald Vizenor, a Chippewa, discusses Indian conceptions of identity in contemporary America, including simulations he calls "postindian identity."".

Resources in Education

This bibliography is a starting point for those interested in researching the American Indian in literature or American Indian literature. Designed to augment other major bibliographies, it classifies all relevant bibliographies and critical works and supplies listings not cited by them. The author's general introduction provides bibliographical background for those beginning research in the field. Cited works are listed alphabetically by the author's or editor's last name in each of three categories: bibliographies; works about the Indian in literature; and Indian literature. Each citation is numbered and the cross-referenced subject and author indexes refer to each work by number, thereby facilitating speedy reference.

Literature of the American Indian

The Handbook of Native American Literature is a unique, comprehensive, and authoritative guide to the oral and written literatures of Native Americans. It lays the perfect foundation for understanding the works of Native American writers. Divided into three major sections, Native American Oral Literatures, The Historical Emergence of Native American Writing, and A Native American Renaissance: 1967 to the Present, it includes 22 lengthy essays, written by scholars of the Association for the Study of American Indian Literatures. The book features reports on the oral traditions of various tribes and topics such as the relation of the Bible, dreams, oratory, humor, autobiography, and federal land policies to Native American literature. Eight additional essays cover teaching Native American literature, new fiction, new theater, and other important topics, and there are bio-critical essays on more than 40 writers ranging from William Apes (who in the early 19th century denounced white society's treatment of his people) to contemporary poet Ray Young Bear. Packed with information that was once scattered and scarce, the Handbook of Native American Literature -a valuable one-volume resource-is sure to appeal to everyone interested in Native American history, culture, and literature. Previously published in cloth as *The Dictionary of Native American Literature*

Index to Literature on the American Indian

Essays on various aspects of the Native American Experience.

Research in Education

A journal of women studies.

Native American Perspectives on Literature and History

This text is an introduction to the full range of standard reference tools in all branches of English studies. More than 10,000 titles are included. The Reference Guide covers all the areas traditionally defined as English studies and all the field of inquiry more recently associated with English studies. British and Irish, American and world literatures written in English are included. Other fields covered are folklore, film, literary theory, general and comparative literature, language and linguistics, rhetoric and composition, bibliography and textual criticism and women's studies.

The Native American in American Literature

The Navajo are the largest tribe of Indians in the United States and, due in part to a fascination with their relative isolation, have been analyzed in numerous documentaries. In this timely supplement to the Navajo Bibliography, Howard M. Bahr engages in a unique postmodern approach to his bibliography of the Navajo culture by combining health-related, artistic, economic, religious, social, scientific, and other literature on the Navajo into one study. The bibliography skillfully downplays disciplinary boundaries by unifying literature that has previously only offered separate classification and access. The more than 6,300 entries are selectively annotated and cover Navajo literature from 1970 to 1990, as well as newly discovered literature, including Franciscans' literature, that was not included in the original Navajo Bibliography. This bibliography is not only the most comprehensive bibliography to date in its coverage of more than two decades of new material, but the only source that supplements the professional literature with local and cultural works. An exhaustive resource that effectively doubles the expanse of Navajo literature surveyed and indexed, Diné Bibliography to the 1990s is an invaluable tool that both highlights the literature already available and expands such data to include coverage of genres that have been previously underrepresented.

Handbook of Native American Literature

This encyclopedia of the North American Indian includes listings of reservations, councils, associations, schools, health services, libraries, publications and college and university courses in the United States including Alaska, and Canada.

Books in Print

This fifth revised edition features approximately 1,900 items, most of which are annotated. It addresses several interdisciplinary studies that have become prominent in the last decade, especially on popular culture, racial and other minorities, Native Americans and Chicanos, and literary regionalism. It allots more space to computer aids, science fiction, children's literature, literature of the sea, film and literature, and linguistic studies of American English and includes a new section on psychology. The appendix lists the biography of each of 135 deceased American authors. ISBN 0-8223-0592-5 : \$22.50 (For use only in the library).

The American Indian

Includes entries for maps and atlases.

Bibliography of American Ethnology

Examines the history, evolution, and culture of the American Indians, discussing both oral and written literature.

Index to Literature on the American Indian

Presents an encyclopedia of American Indian literature in an alphabetical format listing authors and their works.

Iowa English Bulletin

Even as their nations and cultures were being destroyed by colonial expansion across the continent, American Indians became a form of entertainment, sometimes dangerous and violent, sometimes primitive and noble. Creating a fictional wild west, entrepreneurs then exported it around the world. Exhibitions by George Catlin, paintings by Charles King, and Wild West shows by Buffalo Bill Cody

were viewed by millions worldwide. Norman Denzin uses a series of performance pieces with historical, contemporary, and fictitious characters to provide a cultural critique of how this version of Indians, one that existed only in the western imagination, was commodified and sold to a global audience. He then calls for a rewriting of the history of the American west, one devoid of minstrelsy and racist pageantry, and honoring the contemporary cultural and artistic visions of people whose ancestors were shattered by American expansionism.

Governance for Development in Africa

Drawing on in-depth empirical research spanning a number of countries in Africa, Booth and Cammack's path-breaking book offers both an accessible overview of issues surrounding governance for development on the continent, whilst also offering a bold new alternative. In doing so, they controversially argue that externally imposed 'good governance' approaches make unrealistic assumptions about the choices leaders and officials are, in practice, able to make. As a result, reform initiatives and assistance programmes supported by donors regularly fail, while ignoring the potential for addressing the causes rather than the symptoms of this situation. In reality, the authors show, anti-developmental behaviours stem from unresolved - yet in principle soluble - collective action problems. Governance for Development in Africa offers a comprehensive and critical examination of the institutional barriers to economic and social progress in Africa, and makes a compelling plea for fresh policy thinking and new ways of envisioning so-called good governance.

Development as a Collective Action Problem

Tackles one of the most enduring and contentious issues of positive political economy: common pool resource management.

Governing the Commons

Emerging Africa describes the too-often-overlooked positive changes that have taken place in much of Africa since the mid-1990s. In 17 countries, five fundamental and sustained breakthroughs are making old assumptions increasingly untenable: * The rise of democracy brought on by the end of the Cold War and apartheid * Stronger economic management * The end of the debt crisis and a more constructive relationship with the international community * The introduction of new technologies, especially mobile phones and the Internet * The emergence of a new generation of leaders. With these significant changes, the countries of emerging Africa seem poised to lead the continent out of the conflict, stagnation, and dictatorships of the past. The countries discussed in the book are Botswana, Burkina Faso, Cape Verde, Ethiopia, Ghana, Lesotho, Mali Mauritius, Mozambique, Namibia, Rwanda, São Tomé and Príncipe, Seychelles, South Africa, Tanzania, Uganda, and Zambia.

Emerging Africa

This handbook constitutes a single collection of well researched articles and essays on African politics, governance and development from the pre-colonial through colonial to the post-colonial eras. Over the course of these interconnected periods, African politics have evolved with varied experiences across different parts of the continent. As politics is embedded both in the economy and the society, Africa has witnessed some changes in politics, economics, demography and its relations with the world in ways that requires in-depth analysis. This work provides an opportunity for old and new scholars to engage in the universe of the debate around African politics, governance and development and will serve as

a ready reference material for students, researchers, policy makers and investors that are concerned with these issues.

The Palgrave Handbook of African Politics, Governance and Development

Ethics in Public Policy and Management: A global research companion showcases the latest research from established and newly emerging scholars in the fields of public management and ethics. This collection examines the profound changes of the last 25 years, including the rise of New Public Management, New Public Governance and Public Value; how these have altered practitioners' delivery of public services; and how academics think about those services. Drawing on research from a broad range of disciplines, *Ethics in Public Policy and Management* looks to reflect on this changing landscape. With contributions from Asia, Australasia, Europe and the USA, the collection is grouped into five main themes: theorising the practice of ethics; understanding and combating corruption; managing integrity; ethics across boundaries; expanding ethical policy domains. This volume will prove thought-provoking for educators, administrators, policy makers and researchers across the fields of public management, public administration and ethics.

Ethics in Public Policy and Management

Recent research demonstrates that the quality of public institutions are crucial for a number of important environmental, social, economic, and political outcomes, and thereby human well-being. The Quality of Government (QoG) approach directs attention to issues such as impartiality in the exercise of public power, professionalism in public service delivery, effective measures against corruption, and meritocracy instead of patronage and nepotism in the hiring of public sector employees. This handbook offers a comprehensive, state of the art overview of this rapidly expanding research field and also identifies viable avenues for future research. The initial chapters focus on theoretical approaches and debates, and the central question of how QoG can be measured. The remaining chapters examine the wealth of empirical research on how QoG relates to democratization, social cohesion, ethnic diversity, human wellbeing, democratic accountability, economic growth, political legitimacy, environmental sustainability, gender quality, and the outbreak of civil conflicts. These chapters bring evidence to bear to examine, for example, questions of the effect of QoG on subjective well-being (i.e. happiness), social trust and inequality. A third set of chapters turns to the perennial issue of which contextual factors and policy approaches, both national, local and international, have proven successful (and not so successful) for increasing QoG. The Quality of Government approach both challenges and complements important strands of inquiry in the social sciences. For research about democratization, QoG adds the importance of taking state capacity into account. For economics, the QoG approach shows that in order to produce economic prosperity, markets need to be embedded in institutions with a certain set of qualities. For development studies, QoG emphasizes that issues about corruption are integral to understanding development writ large.

The Oxford Handbook of the Quality of Government

Case studies from around the world and theoretical discussion show how the capacity to act collectively on local problems can be developed, strengthening democracy while changing social and economic outcomes. Complexity, division, mistrust, and "process paralysis" can thwart leaders and others when they tackle local challenges. In *Democracy as Problem Solving*, Xavier de Souza Briggs shows how civic capacity—the capacity to create and sustain smart collective action—can be developed and used. In an era of sharp debate over the conditions under which democracy can develop while broadening participation and building community, Briggs argues that understanding and building civic capacity is crucial for strengthening governance and changing the state of the world in the process. More than managing a contest among interest groups or spurring deliberation to reframe issues, democracy can be what the public most desires: a recipe for significant progress on important problems. Briggs examines efforts in six cities, in the United States, Brazil, India, and South Africa, that face the millennial challenges of rapid urban growth, economic restructuring, and investing in the next generation. These challenges demand the engagement of government, business, and nongovernmental sectors. And the keys to progress include the ability to combine learning and bargaining continuously, forge multiple forms of accountability, and find ways to leverage the capacity of the grassroots and what Briggs terms the "grassstops," regardless of who initiates change or who participates over time. Civic capacity, Briggs shows, can—and must—be developed even in places that lack traditions of cooperative civic action.

Democracy as Problem Solving

If you want to understand how politics, institutions, and policy interact with each other to produce economic success or failure - not over the very long run when we are all dead, but in the shorter run that affects us all - there are few books that pack as much insight as this one. Brian Levy is a practitioner who can theorize as well as any scholar. But the real value added of this book is the practical and pragmatic approach it brings to institutional reform." Dani Rodrik, Albert Hirschman Professor of Social Science, Institute for Advanced Study, Princeton.

Working with the Grain

For a long time, economic research on Africa was not seen as a profitable venture intellectually or professionally-few researchers in top-ranked institutions around the world chose to become experts in the field. This was understandable: the reputation of Africa-centered economic research was not enhanced by the well-known limitations of economic data across the continent. Moreover, development economics itself was not always fashionable, and the broader discipline of economics has had its ups and downs, and has been undergoing a major identity crisis because it failed to predict the Great Recession. Times have changed: many leading researchers-including a few Nobel laureates-have taken the subject of Africa and economics seriously enough to devote their expertise and creativity to it. They have been amply rewarded: the richness, complexities, and subtleties of African societies, civilizations, rationalities, and ways of living, have helped renew the humanities and the social sciences-and economics in particular-to the point that the continent has become the next major intellectual frontier to researchers from around the world. In collecting some of the most authoritative statements about the science of economics and its concepts in the African context, this handbook (the first of two volumes) opens up the diverse acuity of commentary on exciting topics, and in the process challenges and stimulates the quest for knowledge. Wide-ranging in its scope, themes, language, and approaches, this volume explores, examines, and assesses economic thinking on Africa, and Africa's contribution to the discipline. The editors bring a set of powerful resources to this endeavor, most notably a team of internationally-renowned economists whose diverse viewpoints are complemented by the perspectives of philosophers, political scientists, and anthropologists. The set of analyses and reflections presented here try to endow each subject with depth and discovery.

The Oxford Handbook of Africa and Economics: Context and concepts

In 2013 almost half of Africa's top aid recipients were ruled by authoritarian regimes. While the West may claim to promote democracy and human rights, in practice major bilateral and international donors, such as USAID, DFID, the World Bank and the European Commission, have seen their aid policies become ever more entangled with the survival of their authoritarian protégés. Local citizens thus find themselves at the receiving end of a compromise between aid agencies and government elites, in which development policies are shaped in the interests of maintaining the status quo. Aid and Authoritarianism in Africa sheds light on the political intricacies and moral dilemmas raised by the relationship between foreign aid and autocratic rule in Africa. Through contributions by leading experts exploring the revival of authoritarian development politics in Ethiopia, Uganda, Rwanda, Cameroon, Mozambique and Angola, the book exposes shifting donor interests and rhetoric as well as the impact of foreign aid on military assistance, rural development, electoral processes and domestic politics. In the process, it raises an urgent and too often neglected question: to what extent are foreign aid programmes actually perpetuating authoritarian rule?

Aid and Authoritarianism in Africa

First comprehensive analysis of electoral politics in Sub-Saharan Africa since the democratic transitions of the early 1990s.

Electoral Politics in Africa since 1990

There are eight years left to reach the SDGs. Agrifood systems transformation is urgently needed if we are to achieve sustainability, resilience and food security and nutrition in a post-COVID world. This desired transformation can only be achieved by strengthening and capitalizing on the knowledge, experience, skills, and capabilities for collective action of a broad range of public and private actors each of whom bring distinctive interests, needs, resources, influence and capacities. "Governance" is the name for this multidimensional capability for effective and inclusive collective action at all levels. In

many country contexts, it is the governance bottlenecks that lead to a gap between policy expectations and their outcomes on the ground. For example, a given policy intervention can make a lot of economic sense but if it is perceived as threatening a powerful interest group or not sufficiently considering that group's interests, it will most probably fail. Understanding the governance – both institutions and political economy – behind existing agrifood systems can thus make or break the success of any policy or technical support work. Bringing together insights from FAO's rich experience and knowledge and global literature, this paper introduces an operational four-phased framework for analysis and integration of governance analysis and action into formulation and implementation of interventions at country, regional and global levels. It also provides a review of recent trends in expert thinking about governance for sustainable development and highlights FAO's conceptual contributions to governance in the areas of FAO's mandate. The increased use of governance analysis in FAO's work will stimulate iterative collective learning processes and honest evaluation of potential for change thus supplementing technical solutions with approaches based on a solid understanding of practical and political realities on the ground. With its emphasis on continual learning and adaptation, governance analysis will enable FAO to significantly improve the effectiveness of its policy and technical support to Members to achieve sustainable development that leaves no one behind.

Focus on governance for more effective policy and technical support

With the rise of the 'knowledge for development' paradigm, expert advice has become a prime instrument of foreign aid. At the same time, it has been object of repeated criticism: the chronic failure of 'technical assistance' – a notion under which advice is commonly subsumed – has been documented in a host of studies. Nonetheless, international organisations continue to send advisors, promising to increase the 'effectiveness' of expert support if their technocratic recommendations are taken up. This book reveals fundamental problems of expert advice in the context of aid that concern issues of power and legitimacy rather than merely flaws of implementation. Based on empirical evidence from South Africa and Tanzania, the authors show that aid-related advisory processes are inevitably obstructed by colliding interests, political pressures and hierarchical relations that impede knowledge transfer and mutual learning. As a result, recipient governments find themselves caught in a perpetual cycle of dependency, continuously advised by experts who convey the shifting paradigms and agendas of their respective donor governments. For young democracies, the persistent presence of external actors is hazardous: ultimately, it poses a threat to the legitimacy of their governments if their policy-making becomes more responsive to foreign demands than to the preferences and needs of their citizens.

The Delusion of Knowledge Transfer

This book examines corruption as a collective behavior problem for entrepreneurs. In particular, it considers Azjen's theory of planned behavior (TPB) to explain perceived corruption and its effects on entrepreneurship. Heydari argues that behavioral intentions are shaped by variables such as attitude, subjective norms and perceived behavioral control. He proposes the novel Heydari Behavioral Synthesis Theory (HBST) model and applies it to two case studies to highlight the institutional, individual and societal factors that may inhibit entrepreneurial behavior. He concludes that corruption may persist not just because of difficulties in monitoring and prosecuting, but because it is systemically pervasive and discourages individual countermeasures. He closes by looking at anti-corruption policies and outlining future research directions. Arguing that widespread corruption may be theoretically mischaracterized in the literature, this book is of interest to policy-makers, researchers and postgraduate students in the fields of management science, industrial and organizational psychology, entrepreneurship and corruption studies.

Corruption and Entrepreneurship

This book investigates the relationship between heritage and development from the global visions articulated by UNESCO and the Sustainable Development Goals (SDGs) to local activism, livelihood innovations and political strategies employed in diverse countries of the Global South. In recent years, as culturally informed approaches to international development have become increasingly important, engaging with heritage has been seen as a way to draw on practices and meanings from the past to help build future development. This book gathers researchers and practitioners from across disciplines to address important themes such as health, the environment, sustainability, peace, security, tourism and economic growth. In doing so, the book asks us to consider whose past and whose future is ultimately at stake in efforts to use heritage for development. Key topics explored include histories and legacies

of colonialism and calls for decolonisation, and related questions of expertise, ownership and agency. Students, practitioners and researchers from across the broad areas of history, heritage, education, archaeology, geography and development studies will find this book an invaluable guide to dynamic and contested understandings of heritage and development and the relationship between them.

Critical Approaches to Heritage for Development

At a time when uneven power dynamics are high on development actors' agenda, this book will be an important contribution to researchers and practitioners working on innovation in development and civil society. While there is much discussion of localization, decolonization and 'shifting power' in civil society collaborations in development, the debate thus far centers on the aid system. This book directs attention to CSOs as drivers of development in various contexts that we refer to as the Global South. This book takes a transformative stance, reimagining roles, relations and processes. It does so from five complementary angles: (1) Southern CSOs reclaiming the lead, (2) displacement of the North–South dyad, (3) Southern-centred questions, (4) new roles for Northern actors, and (5) new starting points for collaboration. The book relativizes international collaboration, asking INGOs, Northern CSOs, and their donors to follow Southern CSOs' leads, recognizing their contextually geared perspectives, agendas, resources, capacities, and ways of working. Based in 19 empirically grounded chapters, the book also offers an agenda for further research, design, and experimentation. Emphasizing the need to 'Start from the South' this book thus re-imagines and re-centers Civil Society collaborations in development, offering Southern-centred ways of understanding and developing relations, roles, and processes, in theory and practice. Routledge Handbook of International Political Sociology

This book presents an overview of the key debates that took place during the Economic and Social Council meetings at the 2007 High-level Segment, at which ECOSOC organized its first biennial Development Cooperation Forum. The discussions also revolved around the theme of the second Annual Ministerial Review, "Implementing the internationally agreed goals and commitments in regard to sustainable development."--P. 4 of cover.

Achieving Sustainable Development and Promoting Development Cooperation

Political leaders and institutions across the Global South are continually failing to respond to the needs of their citizens. This incisive book sets out to establish the pathways to and outcomes of accountability in a development context, as well as to investigate the ways in which people can seek redress and hold their public officials to account.

The State of Accountability in the Global South

A solid understanding of domestic political economy helps to promote policies that are better adapted to country realities. The challenges that many governments faced in responding to food price volatility during the 2008 global food crisis re-focused attention on the political economy and implementing effective national policy responses on food security and nutrition. Understanding the political economy behind public policy-making and implementation is crucial to enhancing the effectiveness of policy support to countries and increases the chances of nationally-led reforms that result in better food security and nutrition outcomes. This political economy analysis note is intended to support policy practitioners and other stakeholders in working in a more politically informed way towards a coherent set of policies across relevant sectors. It demonstrates how political economy analysis can add value to

policy support work, gives examples of key political economy challenges in food security and nutrition and shares information on the existing frameworks and analysis tools.

Strengthening Sector Policies for Better Food Security and Nutrition Results:

Questions surrounding democracy, governance, and development especially in the view of Africa have provoked acrimonious debates in the past few years. It remains a perennial question why some decades after political independence in Africa the continent continues experiencing bad governance, lagging behind socioeconomically, and its democracy questionable. We admit that a plethora of theories and reasons, including iniquitous and malicious ones, have been conjured in an attempt to explain and answer the questions as to why Africa seems to be lagging behind other continents in issues pertaining to good governance, democracy and socio-economic development. Yet, none of the theories and reasons proffered so far seems to have provided enduring solutions to Africa's diverse complex problems and predicaments. This book dissects and critically examines the matrix of Africa's multifaceted problems on governance, democracy and development in an attempt to proffer enduring solutions to the continent's long-standing political and socio-economic dilemmas and setbacks.

Democracy, Good Governance and Development in Africa

'Governance,' as defined by the World Bank in its 1992 report, 'Governance and Development', is 'the manner in which power is exercised in the management of a country's economic and social resources for development.' The report deemed it is within the Bank's mandate to focus on the following: -the process by which authority is exercised in the management of a country's economic and social resources -the capacity of governments to design, formulate, and implement policies and discharge functions. Also available: 'Governance: The World Bank's Experience' (ISBN 0-8213-2804-2) Stock No. 12804.

Gobernabilidad y desarrollo

This study provides a conceptual framework for analysing Results-Based Approaches to improving public sector effectiveness and efficiency according to their actor constellation and shared characteristics. Though the importance of functioning public sector agencies and organizations for sustainable development is accepted, public sector reform efforts have achieved only modest success. Results-Based Approaches aim at improving public sector performance through the establishment of reward modalities on the domestic and international levels, and the authors evaluate the potential of these approaches to provide an entry point for development cooperation. Applying their framework to empirical data obtained from fieldwork in Rwanda, they analyse the main domestic performance approach – Imhigo – and suggest how this might be strengthened.

Public Sector Performance and Development Cooperation in Rwanda

Institutional theory plays a significant role in contemporary political science. As in the previous editions, the new fourth edition provides an overview of the major institutional approaches in the discipline, as well as considering the possibility of a more integrated institutional theory. This edition also contains two new chapters. One assesses the role of informal institutions and their linkages with formal structures of governing. The second new chapter provides a detailed discussion of the processes of institutionalization and deinstitutionalization.

Institutional Theory in Political Science, Fourth Edition

This volume presents a detailed synthesis of the historical, present-day and future state of service delivery in South Africa. The generation and distribution of services in any geographical space has been and is always a source of inequality in human society. Thus, in the context of spatial planning, space is the major factor through which distributive justice and sustainable development can be achieved. To examine the continuation of spatial inequality in service delivery, the authors employed both qualitative and quantitative research methods in a multi-pronged approach, utilizing empirical data from the Vembe District in Limpopo, data from the South African Index of Multiple Deprivation, and representative attitudinal data from the South African Social Attitudes Survey. Ultimately, this study examines spatial differences in living environments with a focus on the distribution of household services and discusses strategies to achieve spatial equality.

Spatial Planning in Service Delivery

For the first time in human history more people now live in towns and cities than in rural areas. In the wealthier countries of the world, the transition from predominantly rural to urban habitation is more or less complete. But in many parts of Africa, Asia and Latin America, urban populations are expanding rapidly. Current UN projections indicate that virtually all population growth in the world over the next 30 years will be absorbed by towns and cities in developing countries. These simple demographic facts have profound implications for those concerned with understanding and addressing the pressing global development challenges of reducing poverty, promoting economic growth, improving human security and confronting environmental change. This revised and expanded second edition of *Cities and Development* explores the dynamic relationship between urbanism and development from a global perspective. The book surveys a wide range of topics, including: the historical origins of world urbanization; the role cities play in the process of economic development; the nature of urban poverty and the challenge of promoting sustainable livelihoods; the complexities of managing urban land, housing, infrastructure and urban services; and the spectres of endemic crime, conflict and violence in urban areas. This updated volume also contains two entirely new chapters: one that examines the links between urbanisation and environmental change, and a second that focuses on urban governance and politics. Adopting a multidisciplinary perspective, the book critically engages with debates in urban studies, geography and international development studies. Each chapter includes supplements in the form of case studies, chapter summaries, questions for discussion and suggested further readings. The book is targeted at upper-level undergraduate and graduate students interested in geography, urban studies and international development studies, as well as policy makers, urban planners and development practitioners.

Cities and Development

African Affairs is the top journal in African Studies and has been for some time. This book draws together some of the most influential, important, and thought provoking articles published in its pages over the last decade. In doing so, it collates essential cutting-edge research on Africa and makes it easily available for students, teachers, and researchers alike. The *African Affairs Reader* is broken down into four sections that cover some of the biggest themes and questions facing the continent today, including: the African State, the Political Economy of Development, Africa's Relationship with the World, and Elections, Representation & Democracy. Within each section, articles deal with some of the most significant recent trends and events, such as the prospects for democratization in Ghana and Nigeria, the factors underpinning Rwanda's economic success, the rise of political corruption in South Africa, the spread of the drugs trade, the struggle against gender based violence, and the growing influence of China. Each section is introduced by a new purpose-written essay by the journal's editors that explains the evolution of the wider debate, highlights key contributions, and suggests new ways in which the discussion can be taken forward. Taken together, the essays and articles included in the volume provide both a coherent introduction to the study of Africa and a compelling commentary on the current state of play on the continent.

The African Affairs Reader

This is an open access title available under the terms of a CC BY-NC-ND 4.0 International License. It is free to read at Oxford Scholarship Online and offered as a free PDF download from OUP and selected open access locations. The puzzle of why some countries are wealthier and more developed than others continues to confound students and practitioners of development alike. Whereas earlier grand explanations focused on issues of 'geography' or 'institutions', the second decade of the 21st century finally saw 'politics' arrive centre-stage within international development. This catalyzed a search to answer the key question: under what conditions do governments become committed to and capable of delivering development? How can these processes be conceptualized and researched? And what (if anything) can be done to 'get the politics right' for development? *Pathways to Development* draws on a major comparative research effort to present new answers to the question of how politics shapes development. It develops and applies a 'power domains' framework across multiple countries in the global South to uncover the political drivers of development across a wide range of policy areas, including economic growth, gender equity, health, and education. Hickey and Sen find that a country's pathway to development is shaped less by institutional type than by the nature of the politics and power relations that underpinned these institutions and which shape how they actually function in practice within different policy domains. Comparative analysis reveals two alternative pathways to

developmental outcomes, each of which is specific to particular configurations of power. The first involves a dominant ruling coalition with a strong developmental vision that faces an existential threat from social forces; the second involves competitive settlements within which the short-term vision of ruling elites and the politicization of the public bureaucracy are offset by the presence of strong and coherent coalitions within particular policy domains. Hickey and Sen use these insights to generate innovative, practical suggestions for policy actors seeking to promote inclusive development that are aligned to critical differences in political context.

Pathways to Development

This handbook presents a comprehensive and multi-faceted analysis of the BRICS countries and other emerging economies, exploring their economic, social, environmental, and governance dimensions and challenges.

Handbook of BRICS and Emerging Economies

This volume is an authoritative and agenda-setting examination of Nigerian politics.

The Oxford Handbook of Nigerian Politics

Development economics and policy are due for a redesign. In the past few decades, research from across the natural and social sciences has provided stunning insight into the way people think and make decisions. Whereas the first generation of development policy was based on the assumption that humans make decisions deliberately and independently, and on the basis of consistent and self-interested preferences, recent research shows that decision making rarely proceeds this way. People think automatically: when deciding, they usually draw on what comes to mind effortlessly. People also think socially: social norms guide much of behavior, and many people prefer to cooperate as long as others are doing their share. And people think with mental models: what they perceive and how they interpret it depend on concepts and worldviews drawn from their societies and from shared histories. The World Development Report 2015 offers a concrete look at how these insights apply to development policy. It shows how a richer view of human behavior can help achieve development goals in many areas, including early childhood development, household finance, productivity, health, and climate change. It also shows how a more subtle view of human behavior provides new tools for interventions. Making even minor adjustments to a decision-making context, designing interventions based on an understanding of social preferences, and exposing individuals to new experiences and ways of thinking may enable people to improve their lives. The Report opens exciting new avenues for development work. It shows that poverty is not simply a state of material deprivation, but also a tax on cognitive resources that affects the quality of decision making. It emphasizes that all humans, including experts and policy makers, are subject to psychological and social influences on thinking, and that development organizations could benefit from procedures to improve their own deliberations and decision making. It demonstrates the need for more discovery, learning, and adaptation in policy design and implementation. The new approach to development economics has immense promise. Its scope of application is vast. This Report introduces an important new agenda for the development community.

World Development Report 2015

This book provides a systematic analysis of how the understanding of corruption has evolved and pinpoints what constitutes corruption.

Making Sense of Corruption

The aim of this scholarly collected work is to contribute to the scientific discourse on public administration in a globalised environment. The book reflects on governance challenges in South Africa and in Africa, with its point of departure being the 'master narratives' (the so-called grand debates) such as New Public Management and, specifically, the role of technology. It also reflects on the so-called middle range discourses concerning organisational-level issues in government (e.g. leadership and work procedures) and explores new solutions to old governance challenges like corruption and service delivery. The uniqueness of this collected work lies in its ability to reflect on existing philosophies and practices in an innovative way. Through its multidisciplinary lens, the book opens up a new vision for the future of public administration in the South African context and on the African continent, not neglecting

the current local, regional and global environment. Until recently, globalisation was considered an entrenched world order, but international political events during the course of the past few years have resulted in one of the biggest challenges to its endurance in recent history. This includes developments such as the successful referendum in Britain to exit the European Union, highlighting the growth of a severe nationalist and protectionist agenda that may be a signal of the unravelling of the current globalism world order. These developments inspire deeper interrogation of the challenges to effective public administration globally and the ripple effects in South Africa and Africa as a whole. Pointedly, it is evident that ensuring the voice of citizens in policy decision-making remains a critical governance challenge. On the policy front, there are perennial challenges of land reform, service delivery and poverty, while on the governance front, corruption has metastasised with a growing culture of impunity and lack of accountability in leadership. In the midst of growing corruption, and more than 20 years into democracy, South Africa's income inequality remains one of the highest in the world. This setting constitutes the context of the research outcome published in this scholarly work.

Culture, philosophies and reforms in public administration for the globalizing world

In recent years Africa appears to have turned a corner economically. It is posting increased growth rates and is no longer the world's slowest growing region. Commentators are beginning to ask whether emerging from Africa is a new generation of 'lion' economies to challenge the East Asian 'tigers'? This book goes behind the headlines to examine the conditions necessary not just for growth in Africa but for a wider business and economic transformation. Contrary to neoliberal economics, it argues that governments can play an important role in this through selective interventions to correct market failures, and, controversially, that neo-patrimonial governance need not be an obstacle to improved business and economic conditions. Drawing on a variety of timely case studies - including Rwanda, Ethiopia, Tanzania and Ghana - this provocative book provides a radical new theory of the political and institutional conditions required for pro-poor growth in Africa.

Business, Politics, and the State in Africa

The book exposes various mechanisms and methods by which covert colonial mechanisms are employed to perpetuate colonialism, especially in Africa. Less overt and more covert perpetuation of colonialism is done through the use of networks. The main achievement of the initial phase of colonialism was the establishment of networks that are nefarious and omnipresent; constituting "distributed presence," which allows for "action at a distance." As a result, colonial subjects became willing participants in these processes, unbeknownst to them, which perpetuated their own colonialism. The book exposes forms of colonialism where manufactured consent is used to perpetuate colonialism. Trapped in this capitalist, Western, Christian language and moral world order without sovereignty, African countries continuously sink deeper into the colonial quagmire.

Breaking the Colonial Contract

How is peace built at the local level? Covering three Lebanese municipalities with striking sectarian diversity, Saida, Bourj Hammoud and Tyre, this book investigates the ways in which local service delivery, local interactions and vertical relationships matter in building peace. Using the stories and experiences of municipal councillors, employees and civil society actors, it illustrates how local activities and agencies are performed and what it means for local peace in Lebanon. Through its analysis, the book illustrates what the practice of peacebuilding can look like at the local level and the wider lessons - both practical and theoretical - that can be drawn from it.

Navigating the Local

How have the waves of democracy and decentralization that swept the developing world in recent decades affected states—among the most important drivers of poverty and prosperity—at national and local levels in Ghana and beyond? State actors beneath the national level—what Barry Driscoll calls the local state—have considerable responsibility for carrying out state functions, but they are also forced to compete for these local state offices. How does a local state actually work in poor twentieth-century countries? This book offers a descriptive account, as well as a causal explanation, of how political competition affects the local state in Ghana. Driscoll shows how closely fought elections drive local state institutions to provide patronage. The source of these demands for patronage comes not from rent-seeking bureaucrats or landed elites but from the government's own party volunteers. Driscoll explains how electoral competition affects how local state actors are insulated from such patronage

demands. Moreover, these highly competitive, patronage-providing local governments actually have relatively better-qualified senior civil servants at their disposal. Driscoll makes sense of this paradox by introducing the logic of building administrative capacity in order to provide patronage. He then abstracts from the case of Ghana to generalize about how the effect of political competition is shaped by the locally salient variety of clientelism, which in turn is conditioned by the strength of the party system. The book draws on fourteen months of fieldwork in six of Ghana's districts, far from the nation's capital city. Ethnographic and interview data come from time spent with market traders, tax collectors, politicians, and other figures in local state offices. Quantitative data come from a survey covering almost all local governments. The result is a detailed account of Ghana's local state power dynamics that has relevant implications for states across the developing world.

Power, Patronage, and the Local State in Ghana

Advances in the social sciences have emerged through a variety of research methods: field-based research, laboratory and field experiments, and agent-based models. However, which research method or approach is best suited to a particular inquiry is frequently debated and discussed. *Working Together* examines how different methods have promoted various theoretical developments related to collective action and the commons, and demonstrates the importance of cross-fertilization involving multimethod research across traditional boundaries. The authors look at why cross-fertilization is difficult to achieve, and they show ways to overcome these challenges through collaboration. The authors provide numerous examples of collaborative, multimethod research related to collective action and the commons. They examine the pros and cons of case studies, meta-analyses, large-N field research, experiments and modeling, and empirically grounded agent-based models, and they consider how these methods contribute to research on collective action for the management of natural resources. Using their findings, the authors outline a revised theory of collective action that includes three elements: individual decision making, microsituational conditions, and features of the broader social-ecological context. Acknowledging the academic incentives that influence and constrain how research is conducted, *Working Together* reworks the theory of collective action and offers practical solutions for researchers and students across a spectrum of disciplines.

Working Together

This book maps the process and political economy of policy making in Africa. Its focus on trade and industrial policy makes it unique and it will appeal to students and academics in economics, political economy, political science and African studies. Detailed case studies help the reader to understand how the process and motivation behind policy decisions can vary from country to country depending on the form of government, ethnicity and nationality and other social factors.

The Politics of Trade and Industrial Policy in Africa
