Patient education and drug therapy Pharmacology and the Nursing Process - Patient education and drug therapy Pharmacology and the Nursing Process by Exam practices for Nursing 899 views 2 years ago 17 minutes - By Lilley|Rainforth Collins|Snyder **9th Edition**, Pharmacology the nursing process and **drug therapy**, <https://youtu.be/zxuaWK8LKt0> ...

Which assessment findings best support the nursing diagnosis of "Deficient knowledge related to medication therapy"?

The nurse is educating a patient diagnosed with type 1 diabetes. When the nurse has the patient demonstrate how to perform self-injections of insulin, which domain of learning is the nurse assessing?

What phase of the nursing process would be a priority for the nurse when providing education on a new medication to a patient and family?

When the nurse completes patient teaching on a new medication, which method will the nurse use to evaluate the patient's understanding of the information?

The nurse is aware that the most appropriate time to begin patient education and begin the teaching-learning process is

A nurse is teaching a patient about the Speak Up Initiatives. Which information should the nurse include?

After providing education regarding medications to a patient who has been newly diagnosed with type 2 diabetes mellitus, the nurse would use which part of the nursing process to determine whether the patient understands these new instructions?

A nurse is preparing for an education session on safe medication administration. Which is the best example of a learning activity that involves the cognitive domain?

A nurse provides teaching about coping with long-term impaired functions. Which situation serves as the best example?

A nurse wants the patient to begin to accept the chronic nature of diabetes. Which teaching technique

should the nurse use to enhance learning?

The nurse developing a discharge plan regarding a patient's medications. When is the most ideal time to begin discharge planning?

The nurse developing a discharge plan regarding a patient's medications. When is the most ideal time to begin discharge planning?

A patient has been instructed to take 25mg of Benadryl oral syrup twice daily as a treatment for a severe case of poison ivy. The medication comes in a bottle that contains 12.5mg/5mL. The nurse

The nurse is providing discharge teaching to an elderly patient with short-term memory problems.

Which strategies will the nurse use in educating the patient? (Select all that apply.)
