decorating our composition book

thicken up the pages by gluing three pages

apply glue to the back of the first page

proceed further with gluing the pages

gluing the pages
glue randomly a set of four pages together rather than three
add some color to the pages
end the back portion with black washi tape
cut it to the shape of the book
add a pocket to the inside cover of our composition book
place your paper down directly on top of the polka dot paper
place it right at the pencil mark
trim off the excess paper

giving away a roll of washi stickers

Mathematical Physics Electronic Journal

The aim of this journal (<http://www.ma.utexas.edu/mpej/>) is to publish papers in mathematical physics and related areas that are of the highest quality. Research papers and review articles are selected through the normal refereeing process, overseen by an editorial board. The research subjects are primarily on mathematical physics; but this should not be interpreted as a limitation, as the editors feel that essentially all subjects of mathematics and physics are in principle relevant to mathematical physics. Contents: Vol. 5: Lower Bounds on Wave Packet Propagation by Packing Dimensions of Spectral Measures (I Guarneri & H Schulz-Baldes) Eigenvalue Asymptotics for the Dirac Operator in Strong Constant Magnetic Fields (G D Raikov) Propagating Edge States for a Magnetic Hamiltonian (S De Bièvre & J V Pulé) On a Conjecture for the Critical Behaviour of KAM Tori (F Bonetto & G Gentile) Local Perturbations of Energy and Kac's Return Time Theorem (Y Lacroix) Stability of the Brown–Ravenhall Operator (G Hoever & H Siedentop) Vol. 6: Construction of the Renormalized $GN_2 - \mu$ Trajectory (M Salmhofer & Chr Wiecezkowski) Families of Whiskered Tori for a Priori Stable/Unstable Hamiltonian Systems and Construction of Unstable Orbits (E Valdinoci) Computer-Assisted Proofs for Fixed Point Problems in Sobolev Spaces (A Schenkel et al.) Degenerate Space–Time Paths and the Non-Locality of Quantum Mechanics in a Clifford Substructure of Space–Time (K Borchsenius) Periodic Orbits of Renormalisation for the Correlations of Strange Nonchaotic Attractors (B D Mestel & A H Osbaldestin) Circle Packing in the Hyperbolic Plane (L Bowen) Readership: Mathematical physicists. Keywords: Mathematical Physics; Spectral Measures; Dirac Operator; Hamiltonian; KAM; Kac; Brown-Ravenhall Operator; Sobolev Spaces; Hyperbolic Plane

Chambers's Journal

For over a century, the Danish thinker Søren Kierkegaard (1813-55) has been at the center of a number of important discussions, concerning not only philosophy and theology, but also, more recently, fields such as social thought, psychology, and contemporary aesthetics, especially literary theory. Despite his relatively short life, Kierkegaard was an extraordinarily prolific writer, as attested to by the 26-volume Princeton University Press edition of all of his published writings. But Kierkegaard left behind nearly as much unpublished writing, most of which consists of what are called his "journals and notebooks." Kierkegaard has long been recognized as one of history's great journal keepers, but only rather small portions of his journals and notebooks are what we usually understand by the term "diaries." By far the greater part of Kierkegaard's journals and notebooks consists of reflections on a myriad of subjects--philosophical, religious, political, personal. Studying his journals and notebooks takes us into his workshop, where we can see his entire universe of thought. We can witness the genesis of his published works, to be sure--but we can also see whole galaxies of concepts, new insights, and fragments, large and small, of partially (or almost entirely) completed but unpublished works. Kierkegaard's Journals and Notebooks enables us to see the thinker in dialogue with his times and with himself. Volume 6 of this 11-volume series includes four of Kierkegaard's important "NB" journals (Journals NB11 through NB14), covering the months from early May 1849 to the beginning of 1850. At this time Denmark was coming to terms with the 1848 revolution that had replaced absolutism with popular sovereignty, while the war with the German states continued, and the country pondered exactly what replacing the old State Church with the Danish People's Church would mean. In these journals Kierkegaard reflects at length on political and, especially, on ecclesiastical developments. His brooding over the ongoing effects of his fight with the satirical journal *Corsair* continues, and he also examines and re-examines the broader personal and religious significance of his broken engagement with Regine Olsen. These journals also contain reflections by Kierkegaard on a number of his most important works, including the two works written under his "new" pseudonym Anti-Climacus (*The Sickness unto Death* and *Practice in Christianity*) and his various attempts at autobiographical explanations of his work. And, all the while, the drumbeat of his radical critique of "Christendom" continues and escalates. Kierkegaard wrote his journals in a two-column format, one for his initial entries and the second for the extensive marginal comments that he added later. This edition of the journals reproduces this format, includes several photographs of original manuscript pages, and contains extensive scholarly commentary on the various entries and on the history of the manuscripts being reproduced.

International Journal of Neutrosophic Science (IJNS) is a peer-review journal publishing high quality experimental and theoretical research in all areas of Neutrosophic and its Applications. IJNS is published quarterly. IJNS is devoted to the publication of peer-reviewed original research papers

lying in the domain of neutrosophic sets and systems. Papers submitted for possible publication may concern with foundations, neutrosophic logic and mathematical structures in the neutrosophic setting. Besides providing emphasis on topics like artificial intelligence, pattern recognition, image processing, robotics, decision making, data analysis, data mining, applications of neutrosophic mathematical theories contributing to economics, finance, management, industries, electronics, and communications are promoted.
