Advanced Open Water Diver Manual

The PADI Rebreather Diver and Advanced Rebreather Diver courses consist of three divisions: knowledge development, practical applications and training dives. Knowledge development develops much of the theory and background information for mastery. This information includes rebreather theory, setup, maintenance, equipment, skills and emergency procedures. The PADI Rebreather Diver & Advanced Rebreather Diver Manual covers much of this information, but the student will also use the rebreather manufacturer's literature extensively. This is because rebreathers vary significantly, so that different procedures apply to different models. During the practical applications, the student will put much of what was studied into practice under the guidance of the PADI Rebreather Instructor. In these sessions, the student practices rebreather setup, pre-dive checks and dive planning. Then, during the training dives the rebreather diving skills will be performed with the PADI Rebreather Instructor.
