

The Mechanization Of Agriculture In Brazil A Sociological Study Of Minas Gerais

[#agricultural mechanization Brazil](#) [#sociological study Minas Gerais](#) [#Brazil farming technology](#) [#Minas Gerais rural development](#) [#impact of mechanization on agriculture](#)

This sociological study explores the profound impact of agricultural mechanization within Brazil, specifically focusing on the rural landscape of Minas Gerais. It delves into the social changes, economic shifts, and community transformations brought about by the adoption of advanced farming technologies in this vital region.

Notes on the dissemination of new technology. Observations on Brazilian agricultural research and productivity. The challenge of agricultural research in Brazil.

Brazilian Agriculture and Agricultural Research

The book, Sociology in Latin America, deals with three areas-rural sociology demography-and the study of Latin American Societies. The purpose of this book is to introduce the reader to the study of population, rural and urban societies and gerontology in various less developed and developing countries of Latin America. This book is a valuable source indicating the influence of history, cultural conflict and the dynamics of modernization and industrialization on various social institutions.

Sociology in Latin America

Beginning in 1954, Apr. issue lists studies in progress; Oct. issue, completed studies.

Research on the American Republics

An ideal resource for researchers and scholars interested in Latin American studies, this unique and valuable guide identifies individuals born between the years 1700 and 1910 who are or were engaged in some activity concerned with Latin America in general or any of its nations or regions. While the majority of Latinamericanists cited here served as university professors, diplomats, and business people, the list of notable experts includes artists, attorneys, authors, bankers, clergy, explorers, economists, geologists, and journalists. For each entry, the author has listed each individual's full name, profession, employer, and two of his publications, thereby indicating his or her Latin American interests. The fascinating array of topics that these pioneers have addressed in their books include subjects that have been studied extensively, as well as those subjects that have barely been reviewed. A valuable feature of the book is the history of Latin American studies, written by pioneer Dr. A. P. Nasatir, Research Professor of History Emeritus at San Diego State University, who began teaching in the United States in 1928. Faculty, students, and researchers interested in Latin American studies will find this book valuable.

External Research

International journal for sociology and social psychology.

External Research. ER List

Agricultural economics research paper presenting a framework for the economic analysis of the social implications and economic implications of agricultural mechanization in developing countries - specifies the major types of agricultural policy decisions in this field and the research needs for improving decision making, reviews selected economic studies on farm mechanization in terms of research methodology, etc., and makes suggestions for the redirection of research. Bibliography pp. 57 to 67.

Research on the American Republics, Excluding the United States, Completed and in Progress

Survey of agricultural engineering and its literature; Annotated Bibliography of sources of information; Organizational sources of information.

Unpublished Research on American Republics, Excluding the United States, Completed and in Progress

Includes sections "Current bulletins" and "Book reviews".

External Research List

Guide to the Writings of Pioneer Latinamericanists of the United States

This book comprehensively examines the development of Brazilian agriculture by focusing on the crops which evolved from national products to international commodities on a massive scale. It traces the transformation of Brazil from a country with low-yield levels in 1950 to its current position as a leading world producer. The first section of the book examines the modernization of Brazilian agriculture through a government programme which transformed traditional agriculture through subsidized credit, guaranteed prices, stock purchases, land utilization laws, modern research, new technology and major support for exports. It also explores the changing structures of agricultural production and farm ownership over time, analysing national censuses from 1920 to 2017 to illustrate the increasing efficiency of Brazil's agricultural workers. The book then discusses the history and evolution of the major Brazilian crops in detail, starting with the newer export crops such as soybeans, maize and cotton, before focusing on the traditional sugar and coffee industries. The final section of the book examines two other major areas of agroindustry: forestry and the evolution of the pastoral industries, as well as the growth of a meat exporting sector. The authors also explore questions of sustainability in the context of today's climate challenges, and the role of Brazilian agriculture in the world market going forward. This wide-ranging study will be of interest to a range of academics, including those working in agricultural economics, economic history, the history of Latin America and the history of agriculture more broadly.
