Managerial Economics involves an analysis of the allocation of the resources available to a firm, or a unit of management among the activities of that unit. It makes use of concepts and theories of economics and assists managers to make rational decision. The present book emphasizes on conceptual clarity and simplified presentation. The book comprehensively covers all the aspects that impinge upon economic decision making of modern business units. Thus, allowing a great deal of flexibility in the choice of topics that any teacher or student may wish to cover. This text would be helpful for the students of Commerce, Management, Economics, Engineering, Law, and other social sciences disciplines. It is also useful to the practicing managers of various business units within and outside the country. The book integrates various concepts and ideas from the fields of economics and other subjects, which have bearing on managerial decision making and policy formulation within the business unit. It provides a number of suitable examples, including large number of review questions, objective type questions and exercises. The text focuses on the concepts related to macroeconomics and business decision, and modern approaches to managerial economics.

The British National Bibliography Cumulated Subject Catalogue

Reflecting the dramatic changes shaped by rapidly developing technologies over the past six years, this new fourth edition of Reference and Information Services takes the introduction to reference sources and services significantly beyond the content of the first three editions. In Part I, Concepts and Processes, chapters have been revised and updated to reflect new ideas and methods in the provision of reference service in an era when many users have access to the Web. In Part II, Information Sources and Their Use, discussion of each source type has been updated to encompass key resources in print and on the Web, where an increasing number of freely available sources join those purchased or licensed by libraries. A number of new authors are contributors to this new edition, bringing to their chapters their experience as teachers of reference and as practitioners in different types of libraries. Discussions of services in Part I integrate digital reference as appropriate to each topic, such as how to conduct a reference interview online using instant messaging. Boxes interspersed in the text are used to present scenarios for discussion, to highlight key concepts, or to present excerpts from important documents. Discussions of sources in Part II place more emphasis on designing effective search strategies using both print and digital resources. The chapter on selection and evaluation of sources addresses the changing nature of reference collections and how to evaluate new types of sources. Each

chapter concludes with an updated list of additional readings to guide further study. A new companion website will provide links to Web-accessible readings and resources as well as additional scenarios for discussion and example search strategies to supplement those presented in the text.

This unprecedented collection of 27,000 quotations is the most comprehensive and carefully researched of its kind, covering all fields of science and mathematics. With this vast compendium you can readily conceptualize and embrace the written images of scientists, laymen, politicians, novelists, playwrights, and poets about humankind's scientific achievements. Approximately 9000 high-quality entries have been added to this new edition to provide a rich selection of quotations for the student, the educator, and the scientist who would like to introduce a presentation with a relevant quotation that provides perspective and historical background on his subject. Gaither's Dictionary of Scientific Quotations, Second Edition, provides the finest reference source of science quotations for all audiences. The new edition adds greater depth to the number of quotations in the various thematic arrangements and also provides new thematic categories.
