Intro

a. Elements b. Compounds c. Molecules d. Mixtures

B: Elements and compounds are both pure substances. Elements consist of only one type of atom. Compounds consist of more than one type of atom. Molecules may make up either elements or compounds. Mixtures are two or more substances that are physically combined but not chemically united.

ANSWER C: A chemical change involves a chemical reaction. New substances are produced. When silver tarnishes, a thin layer of corrosion is formed indicating a chemical change. A physical change does not produce new substances. Phase changes such as evaporation and sublimation are physical changes. Salt dissolving in water is also a physical change, because the ions just separate, and no new substances are formed.

are named from the cation and anion names. The name of this compound is copper (II) chloride. The Roman number II inside the parentheses indicates which copper ion is present.

D: Vinegar is a 5% solution of acetic acid. The pH scale ranges from 0 to 14. Substances with pH's near zero are strong acids, and substances with pH's near 14 are strong bases. Substances with pH's of 7 are neutral. Bleach is a strong base, and ammonia is a relatively weak base. Water is neutral. Since vinegar is the only acid listed, the pH of vinegar is the closest to a pH of 1.
