PROJECT LEILAC

Constructing the LEILAC (Low Emissions Intensity Lime and Cement) Pilot, that will demonstrate capture of unavoidable process CO2 emissions.

The foundation and piles are first installed, kicking off the construction phase of the project.

The inner tube and internal geometry may be installed as single pieces.

The CO2 offtake and powder distribution systems are connected to the top of the reactor.

The filter and mass flow control systems are installed on top of the tower.

Pipework, pipe supports and nozzles are installed, finally connecting the LEILAC pilot plant to the surrounding cement plant.
