Why is hosting the Olympic Games so important to China? What is the significance of a quintessential symbol of Western civilization taking place in the heart of the Far East? Will the Olympics change China, or will China change the Olympics? Susan Brownell sets the historical and cultural contexts for the 2008 Beijing Olympics Games by placing it within the context of China's hundred-year engagement with the Olympic movement to illuminate what the Games mean to China and what the Beijing Olympic Games will mean for China's relationship with the outside world. Brownell's deeply informed analysis ranges from nineteenth-century orientalism to Cold War politics and post-Cold War "China bashing." Drawing on her more than two decades of engagement in Chinese sports, the author presents evocative stories and first-person accounts to paint a human picture of the passion that many Chinese people feel for the Olympic Games. It will also be essential reading for journalists and sports enthusiasts who want to understand the fascinating story behind the Beijing Olympics.

The Gladiator Mindset

Television has always augmented its dramatic and variety programming with sports. After covering wrestling and boxing matches for several years, ABC added the hugely popular Roller Derby between 1949 and 1951, and later, college and pro football. Today, there is a multitude of pay and cable networks devoted exclusively to baseball, football, golf, hockey, tennis, ice-skating, and auto racing. Rather than focusing on live sports broadcasts, however, this book chronicles the history of sports-themed comedies and dramas, to see how our national fictions have affected our authentic sports experiences, and vice versa. Sports dominate the television landscape today, and still the demand for more is so great that pay and cable networks continue to find funding and success, even when devoted exclusively to a single sport. But this is really nothing new: television has always augmented its dramatic and variety

programming with sports. Live sports have had a tremendous impact on what we see on television, and on how we see it. Rather than focusing on live sports broadcasts, however, this book takes a critical look at sports-themed comedies and dramas, to see how our authentic sports affect our national fictions as well. From the character studies that supplement Olympic coverage, to nightly highlight reels, to reality programming on ESPN, sports both echo and help shape the myths that pervade our culture. Sports on Television covers the changing relationship between live sports broadcasts and television dramas, as well as the important technological developments and cultural shifts that have changed the way we view the reality of sports. In 1949, after covering wrestling and boxing matches for several years, ABC added the hugely popular Roller Derby, and later moved on to college and pro football, where humble beginnings have since developed into a national obsession. In the early sixties Jimmy Stewart played a disgraced baseball player in Flashing Spikes—which was also one of the rare ventures into television for veteran director John Ford. On HBO the Yankees have been the subject of both 61* - about Roger Maris's quest to top Babe Ruth's home run record - and The Bronx Is Burning, about the 1977 Yankees team. And there have been sports-themed TV sitcoms as well, such as Sports Night, Aaron Sorkin's critically lauded but commercially unsuccessful project, which preceded his work on The West Wing. Meanwhile American Gladiators—a strange blend of canned programming and authentic athletic endeavor that in effect puts television audiences in an arena with what amounts to professional athletes—is quickly becoming one of the most popular shows on primetime. Here, Marill gives due time to all of these unique projects.

Sociological Abstracts

No one was born great. The greatest athletes in the world have poured blood, sweat and tears into their sport to become the best and this book covers exactly what you need to do to separate yourself from the rest of the pack. Despite being surrounded by great athletes, only a select few are able to break through the ranks and come out on top. One thing sets them apart and enables them to continually break records and become better on a daily basis. This book dives deep into how you can condition your mind to become one of the greatest athletes to ever step foot on the field and teach you exactly how to smash through every goal you have ever set for yourself. Although this book is primarily focused on soccer, any athlete from any background will be able to learn valuable lessons and implement them into their games and competitions.

The Ultimate Guide to the Sport of Gymnastics for Parents and Athletes

Encourages athletes to integrate their whole being into their sports. Instead of just looking at the physical aspect of sports, this book takes it a step further. It helps athletes to incorporate their spiritual, emotional, mental, social, and occupational self as they train and compete.

Sports have taken on tremendous importance in the world in which we live. Their social significance - economic, political, and personal - both nationally and internationally is unprecedented. What may not be so immediately obvious is the sociological nature of sports. Sport offers one of the most visible public arenas for understanding the role that 'immortality' plays in individual action, group dynamics, and with audiences and the media. Following a brief introduction to the sociology of sport, Leonard explores these dimensions of the sporting world through the idea of the 'post-self' - how individuals regard themselves and want to be remembered by the public. From the individual psyche to the global arena of sports, this book features vivid examples and quotations from star athletes, coaches, and the media, offering poignant insights into the sporting world and about individuals and society.

As the first monk in the desert, Antony became an early Christian superstar, eclipsing his many ascetic predecessors. The introduction of asceticism into the wilderness also represented an encounter between Christian and Hellenistic ideas. For centuries Greeks had considered the uncultivated geography intrinsically primordial, a chaotic place where man struggled to remain human. The wilderness represented an eternal ordeal, where man always faced fierce beasts, disorder, and death, but also where simultaneously he could attain boundless wealth, wisdom, and even physical immortality. Through Athanasius of Alexandria's fourth-century biography of Antony, we learn how the Christian appropriation of Greek ideas on geography, bodies and immortality raised asceticism to an entirely new level. Placed in his uncultivated landscape, Antony became a true martyr, an athlete of God, and a holy man able to retrieve the bodily incorruptibility lost in the Fall, which all Christians could look forward to at the end of times. In this way Athanasius employed a traditional Greek worldview to demonstrate the superiority of Christianity over Paganism, which never promised ordinary people anything but an eternal existence as dead and disembodied souls.

The greatest athletic performances spring from the mind, not the body. Elite athletes have known this for decades and now science is learning why it's true. In his fascinating new book *How Bad Do You Want It?*, coach Matt Fitzgerald examines more than a dozen pivotal races to discover the surprising ways elite athletes strengthen their mental toughness. Fitzgerald puts you into the pulse-pounding action of more than a dozen epic races from running, cycling, triathlon, XTERRA, and rowing with thrilling race reports and revealing post-race interviews with the elites. Their own words reinforce what the research has found: strong mental fitness lets us approach our true physical limits, giving us an edge over physically stronger competitors. Each chapter explores the how and why of an elite athlete's transformative moment, revealing powerful new psychobiological principles you can practice to flex your own mental fitness. The new psychobiological model of endurance performance shows that the most important question in endurance sports is: how bad do you want it? Fitzgerald's fascinating book will forever change how you answer this question and show you how to master the psychology of mind over muscle. These lessons will help you push back your limits and uncover your full potential. *How Bad Do You Want It?* reveals new psychobiological findings including: Mental toughness determines how close you can get to your physical limit. Bracing yourself for a tough race or workout can boost performance by 15% or more. Champions have learned how to give more of what they have. The only way to improve performance is by altering how you perceive effort. Choking under pressure is a form of self-consciousness. Your attitude in daily life is the same one you bring to sports. There's no such thing as going as fast as you can—only going faster than before. The fastest racecourse is the one with the loudest spectators. Faith in your training is as important as the training itself. Athletes featured in *How Bad Do You Want It?*: Sammy Wanjiru, Jenny Simpson, Greg LeMond, Siri Lindley, Willie Stewart, Cadel Evans, Nathan Cohen and Joe Sullivan, Paula Newby-Fraser, Ryan Vail, Thomas Voeckler, Ned Overend, Steve Prefontaine, and last of all John "The Penguin" Bingham

Oracle 10g Developing Media Rich Applications

Oracle 10g Developing Media Rich Applications is focused squarely on database administrators and programmers as the foundation of multimedia database applications. With the release of Oracle8 Database in 1997, Oracle became the first commercial database with integrated multimedia technology for application developers. Since that time, Oracle has enhanced and extended these features to include native support for image, audio, video and streaming media storage; indexing, retrieval and processing in the Oracle Database, Application Server; and development tools. Databases are not only words and numbers for accountants, but they also should utilize a full range of media to satisfy customer needs, from race car engineers, to manufacturing processes to security. The full range of audio, video and integration of media into databases is mission critical to these applications. This book details the most recent features in Oracle's multimedia technology including those of the Oracle10gR2 Database and the Oracle9i Application Server. The technology covered includes: object relational media storage and services within the database, middle tier application development interfaces, wireless delivery mechanisms, and Java-based tools. * Gives broad coverage to integration of multimedia features such as audio and instrumentation video, from race cars to analyze performance, to voice and picture recognition for security data bases. As well as full multimedia for presentations * Includes field tested examples in enterprise environments * Provides coverage in a thorough and clear fashion developed in a London University Professional Course

Business Analytics

Technological advances in the last five years have allowed organizations to use Business Analytics to provide insights, increase understanding and it is hoped, gain the elusive 'competitive edge'. The rapid development of Business Analytics is impacting all enterprise competences profoundly and classical business professions are being redefined by a much deeper interplay between business and information systems. As computing capabilities for analysis has moved outside the IT glass-house and into the sphere of individual workers, they are no longer the exclusive domain of IT professionals but rather accessible to all employees. Complex open-source data analytics packages and client-level visualization tools deployed in desktops and laptops equip virtually any end-user with the instruments to carry out significant analytical tasks. All the while, the drive to improve 'customer experience' has heightened the demand for data involving customers, providers and entire ecosystems. In response to the proliferation of Business Analytics, a new Center and Masters of Science Program was introduced at the National University of Singapore (NUS). The Center collaborates with over 40 different external partner organizations in Asia-Pacific with which all MSBA students undertake individual projects. Business Analytics: Progress on Applications in Asia Pacific provides a useful picture of the maturity of the Business Analytics domain in Asia Pacific.
