Dr Chris Flannigan

Consider going straight for intraosseous access in crashing patients

Use cefotaxime rather than ceftriaxone initially in septic shock

Don't exceed the adult maximum dose when using salbutamol infusions

Don't delay calling the ambulance in a patient needing time critical transfer

When you see a collar think bougie

Use a cuffed endotracheal tube in all critically ill children unless contraindicated

Don't insert upper circulation central lines in patients with hypokalaemia

Use ultrasound to help insert arterial lines in children with weak or impalpable pulses

Start prostaglandin infusions at a dose appropriate to the clinical situation

Don't try to lead and do at the same time

Bundled Care of Pediatric Critical Care Patients: Guidelines and Implementation - Bundled Care of Pediatric Critical Care Patients: Guidelines and Implementation by SCCM 1,576 views 1 year ago
