The Creativity Conundrum

This book challenges traditional notions of creativity as a trait, and brings forward ideas of multiple types of creativity, along with the possibility of development of creativity.

Creativity and Reason in Cognitive Development

To what extent do creativity and imagination decline in childhood? What factors might influence a decline? Theories of cognitive development show only uni-directional progress (although theorists may disagree whether such progress occurs steadily in small continuous improvements or comes in stages separated by plateaus during which developmental gains are consolidated). Declines in levels of skill are quite uncommon, yet many have observed just such an unusual pattern with regard to the development of creativity and of the imagination. Is there something about the development of one kind of thinking that undermines imaginative and creative thinking? Is it perhaps the process of schooling itself, with its focus on the acquisition of knowledge and the production of correct (rather than imaginative) answers, which promotes this decline? This book explores these questions from a variety of perspectives. Essays from psychologists and educators from diverse backgrounds discuss the relationships among creativity, reason, and knowledge.

Shaping Psychology

Shaping Psychology is a unique collection of in-depth conversations with a selection of the most influential psychologists working today, conducted at the end of a decade that shook psychological science. They provide insights into the controversies at the heart of contemporary psychology, revealing a clash of visions of what psychological science is all about and what its future holds. They are candid on the crisis in psychology and explore its causes, consequences and how to overcome it. They also discuss challenges in the field, their careers, and the experiences that shaped their worldview. Those interviewed include pioneers who have shaped psychology as we know it today and who represent a wide range of specializations, from research to mental health practice, mainstream psychology to critical psychology and neuroscience to the Open Science movement. Implementing Communities of Practice in Higher Education

In this edited collection, the authors pick up the communities of practice (CoP) approach of sharing practice in their reflection on the experience of taking their CoP vision from a dream to reality. Their stories articulate the vision, the passion and the challenge of working within and/or changing existing institutional culture and practice. The book discusses strategies that worked and considers the lessons learnt to inspire future dreamers and schemers. The multiple perspectives provided in the case studies will assist higher education leaders, as well as academic and professional staff, in establishing or assessing CoPs. The book offers insights into implementation strategies, practical guidelines and ideas on how CoP theoretical underpinnings can be tailored to the higher education context.

Space and Sense

How do we perceive the space around us, locate objects within it, and make our way through it? What do the senses contribute? This book focuses on touch in order to examine which aspects of vision and

touch overlap in spatial processing. It argues that spatial processing depends crucially on integrating diverse sensory inputs as reference cues for the location, distance or direction response that spatial tasks demand. Space and Sense shows how perception by touch, as by vision, can be helped by external reference cues, and that 'visual' illusions that are also found in touch depend on common factors and do not occur by chance. Susanna Millar presents new evidence on the role of spatial cues in touch and movement both with and without vision, and discusses the interaction of both touch and movement with vision in spatial tasks. The book shows how perception by touch, as by vision, can be helped by external reference cues, and that 'visual' illusions that are also found in touch depend on common factors and do not occur by chance. It challenges traditional views of explicit external reference cues, showing that they can improve spatial recall with inputs from touch and movement, contrary to the held belief. Space and Sense provides empirical evidence for an important distinction between spatial vision and vision that excludes spatial cues in relation to touch. This important new volume extends previous descriptions of bimodal effects in vision and space.

The Déjà Vu Experience

Most of us have been perplexed by a strange sense of familiarity when doing something for the first time. We feel that we have been here before, or done this before, but know for sure that this is impossible. In fact, according to numerous surveys, about two-thirds of us have experienced déjà vu at least once, and most of us have had multiple experiences. There are a number of credible scientific interpretations of déjà vu, and this book summarizes the broad range of published work from philosophy, religion, neurology, sociology, memory, perception, psychopathology, and psychopharmacology. This book also includes discussion of cognitive functioning in retrieval and familiarity, neuronal transmission, and double perception during the déjà vu experience.

Space, Objects, Minds and Brains

Lynn Robertson has been studying how brain lesions affect spatial abilities for over 20 years, and her work has revealed some surprising facts about space and its role in visual perception. In this book she combines evidence collected in her laboratory with findings from others to explore the cognitive and neural basis of spatial representations and their contributions to spatial awareness, object formation, attention, and binding.

The Essential Sternberg

"I strongly recommend this book to people working in the area of intellectual disabilities...It may open new vistas that are not always available in the traditional disability literature. It will especially challenge psychologists working in this field."--Journal of Policy and Practice in Intellectual Disabilities "For years, Robert Sternberg has produced renowned, groundbreaking work, and now some of it is captured in one volume: The Essential Sternberg...Established scholars and novices to the field will find this book a useful addition to their libraries."--Psychology of Aesthetics, Creativity, and the Arts "[Sternberg] approaches the definition of intelligence from a very pragmatic perspective...Sternberg's focus on success in the real world is refreshing."--Teacher's College Record Any follower of Sternberg and theories of intelligence will need this collection on their bookshelf. Robert J. Sternberg has argued that the conventional idea of intelligence is, at best, incomplete. Therefore, he has redefined the core concept of intelligence: Sternberg's groundbreaking, triarchic theory proposes that intelligence is measured not just by factual knowledge or "book smarts," but also by the integration of creative ability, practical know-how, and analytic reasoning. As the former President of the American Psychological Association, current Dean of Tufts University, and one of the top 100 psychologists of the 20th century, according to the APA Monitor on Psychology, Sternberg is listed as one of ISI's most highly cited authors (top .5%) in psychology. Sternberg has authored over 1,000 journal articles, book chapters, and books. This comprehensive collection compiles the best of Sternberg-his most influential, career-defining articles culled from over 30 years of research. Serving as an introduction to and summary of his most critical contributions to the field, this book: Presents articles that track the development and progression of Sternberg's theory of successful intelligence Includes his most influential articles, such as "The nature of creativity" and "The Rainbow Project: Enhancing the SAT" Features articles on educational policy and how Sternberg's intelligence models can be used to improve student performance and supplement traditional exams Contains new articles on Sternberg's most recent theory, the Wisdom, Intelligence, Creativity, Synthesized (WICS) model

Merce Cunningham's Presence in the Present

This work analyzes the activities of the Merce Cunningham Dance Foundation to address the confluence of many issues facing artists, arts organizations and art policy-makers in the United States : the relationship of present creative practice to historical documentation; the interaction between the organizing bodies of policy and administration and the human bodies that enact and participate in creative work; and the institutionalization of memory and community.

Challenging ICT Applications in Architecture, Engineering, and Industrial Design Education

Are Information and Communications Technologies (ICTs) helpful or detrimental to the process of design? According to Aristotle, the imagination is a mental power that assists logical, sound judgments. Design, therefore, incorporates both reason and imagination. Challenging ICT Applications in Architecture, Engineering, and Industrial Design Education posits imagination as the central feature of design. It questions the common assumption that ICTs are not only useful but also valuable for the creation of the visual designs that reside at the core of architecture, engineering design, and industrial design. For readers who believe this assumption is right, this book offers an alternative perspective.

American Book Publishing Record

What is creativity, and where does it come from? Creativity and Development explores the fascinating connections and tensions between creativity research and developmental psychology, two fields that have largely progressed independently of each other-until now. In this book, scholars influential in both fields explore the emergence of new ideas, and the development of the people and situations that bring them to fruition. The uniquely collaborative nature of Oxford's Counterpoints series allows them to engage in a dialogue, addressing the key issues and potential benefits of exploring the connections between creativity and development. Creativity and Development is based on the observation that both creativity and development are processes that occur in complex systems, in which later stages or changes emerge from the prior state of the system. In the 1970s and 1980s, creativity researchers shifted their focus from personality traits to cognitive and social processes, and the co-authors of this volume are some of the most influential figures in this shift. The central focus on system processes results in three related volume themes: how the outcomes of creativity and development emerge from dynamical processes, the interrelation between individual processes and social processes, and the role of mediating artifacts and domains in developmental and creative processes. The chapters touch on a wide range of important topics, with the authors drawing on their decades of research into creativity and development. Readers will learn about the creativity of children's play, the creative aspects of children's thinking, the creative processes of scientists, the role of education and teaching in creative development, and the role of multiple intelligences in both creativity and development. The final chapter is an important dialogue between the authors, who engage in a roundtable discussion and explore key questions facing contemporary researchers, such as: Does society suppress children's creativity? Are creativity and development specific to an intelligence or a domain? What role do social and cultural contexts play in creativity and development? Creativity and Development presents a powerful argument that both creativity scholars and developmental psychologists will benefit by becoming more familiar with each other's work.

Creativity and Development

The book is about creativity and relates to the field of creative cognition, divergent thinking, and innovation. The essays collected here highlight new and exciting explorations of ideas and theories of integrative approaches to the creative mind. This singularity allows a unique and fresh look at the concept of creativity. The primary markets for this book are universities and professional bodies in the field of psychology, humanities and social sciences, and it will also appeal to specialists in the fields of cognitive psychology, sociology, culturology, the arts studies, physiology, and other areas of the humanities.

Integrative Explorations of the Creative Mind

This book offers a multidisciplinary and multi-domain approach to the most recent research results in the field of creative thinking and creativity, authored by renowned international experts. By presenting contributions from different scientific and artistic domains, the book offers a comprehensive description of the state of the art on creativity research. Specifically, the chapters are organized into four parts:

1) Theoretical Aspects of Creativity; 2) Social Aspects of Creativity; 3) Creativity in Design and Engineering; 4) Creativity in Art and Science. In this way, the book becomes a necessary platform for generative dialogue between disciplines that are typically divided by separating walls.

Multidisciplinary Contributions to the Science of Creative Thinking

Recent years have witnessed an increasing awareness of the importance and relevance of creativity in social and psychological life. This has led to an awakening of research into creativity. The book "New Frontiers in Creativity" deals with themes that have emerged due to the expanding boundaries of research in creativity. These concern primarily new perspectives in regard to creativity, discovering of creativity in new populations and nurturing of creativity in new domains and spheres of action. The book presents four new perspectives concerning creativity. The first is a comprehensive model of creativity (by Kreitler) that does justice to the complexity of creativity in terms of the constitutive components, ranging from cognition through motivation, emotions, personality, psychopathology, behavior and the environment, focusing on the rich variety of variables in each of the components and their interactions. Another perspective focuses on creativity in the study and research of creativity (by Runco) by adopting meta-cognitive powerful tactics in the study and nurturing of creativity. A third new perspective describes the innovative methods and findings in neurophysiology of creativity, particularly in brain studies (by Shemyakina and Nagornova). The set of new perspectives is complemented by a description of the social processes characterizing the spread and maintenance of innovative ideas (by Fokas). The innovation in terms of populations is presented in the discussion of creativity in individuals diagnosed with dyslexia (by Cancer and Antonietti), in the controversial sphere of psychopathology (by Thys) and in the elderly (by Cohen-Shalev). Notably, the creativity of all three populations has been increasingly recognized in recent years. The third part of the book is devoted to creativity in various domains, including painting (by Vardi), psychotherapy (by Buzdugan, Grigore and Dinca), engineering (by Engel), architecture (by Casakin), sports (by Santos, Sampaio and Memmert) and nature (by Edlinger). The book includes 13 chapters, written by internationally known experts from different countries—Austria, Belgium, Hungary, Italy, Israel, Portugal, Romania, Russia, and USA—responsible for discoveries in the specific aspect of creativity with which they deal. The different chapters of the book present innovative approaches, based on empirical evidence and innovative methodologies. Thereby they contribute to the setting of the scene for new developments and new applications of creativity in the rapidly changing world that is in increasing need for creativity.

New Frontiers in Creativity

This 1988 book provides sixteen chapters by acknowledged experts on the richness and diversity of psychological approaches to the study of creativity.

Forthcoming Books

The other, a contrasting and more contemporary approach, is the model of "bounded rationality," according to which people are surprisingly irrational, or at best arational, in their thinking, often deriving ill-conceived shortcuts that lead them to wrong conclusions. This text is a synthesis of these two approaches, combining the best elements of each to offer a radically inclusive new theory. It emphasizes multiple points of view, including the objective, but also the subjective views of the self and others.

The Nature of Creativity

What is creativity? How does it work? How does it flourish in individuals and organizations? Now in its second edition, this bestselling introductory text--written by one of the world's leading experts on the psychology of creativity--is completely updated and expanded to reflect the tremendous growth in this field. In a redesigned, reader-friendly format, the text surveys the latest theories and research to provide key information about what we know (and don't know) about creativity including its many definitions and measures. It addresses how creativity operates on individual and social/environmental levels, and the effects and outcomes of the creative mind. This much-praised book is an ideal brief text for courses on creativity in psychology, education, business, and other fields, as well as cross-disciplinary seminars and programs in creativity studies. New to the Second Edition: Completely updated and expanded with new theories and research Restructured to enhance flow of information and ease of use New chapters on measuring creativity, creativity and mental health, creative environments, how creativity is perceived by self and society, and its positive and negative aspects Coverage of new models and frameworks

Expanded coverage of creativity and motivation, mental illness, and mood; history of creativity research; the creative process; and neuroscientific theories and approaches Thorough reconceptualization of creativity and personality New content on differences between creativity, imagination, and innovation Expanded coverage of creativity assessment Key Features: Surveys theory, research, and applications of creativity concisely and accessibly Written in an engaging style by a world-renowned creativity expert Ideal for courses on creativity in psychology, education, business, and other fields, as well as cross-disciplinary seminars

Complex Cognition

This first volume of the Collected Works of Mihaly Csikszentmihalyi represents his work on Art and Creativity. Starting with his seminal 1964 study on creativity up to his 2010 publication in Newsweek, the volume spans over four decades of research and writing and clearly shows Csikszentmihalyi's own development as an academic, psychologist, researcher and person. Unconventional and unorthodox in his approach, Csikszentmihalyi chose the topic of creativity as a field of study believing it would help him be a better psychologist and advance his understanding of how to live a better life. The chapters in this volume trace the history of the study of creativity back to the days of Guilford and research on IQ and Jacob Getzels' work on creativity and intelligence. Firmly grounded in that history, yet extending it in new directions, Mihaly Csikszentmihalyi started his life-long study on artistic creativity. His first extensive study at the School of the Art Institute of Chicago enabled him to observe, test and interview fine art students drawing in a studio. The study formed the very basis of all his work on the subject and has resulted in several articles, represented in this volume, on such creativity-related concepts as problem solving versus problem finding, the personality of the artist, the influence of the social context, creativity as a social construction, developmental issues and flow. The main contribution to the topic of creativity and also the main concept explored in this volume, is the Systems Model of Creativity. Seven chapters in this volume discuss the development of this conceptual model and theory.

Creativity 101, Second Edition

Milieus of Creativity is the second volume in the book series Knowledge and Space. This book deals with spatial disparities of knowledge and the impact of environments, space and contexts on the production and application of knowledge. The contributions in this volume focus on the role of places, environments, and spatial contexts for the emergence and perpetuation of creativity. Is environment a social or a spatial phenomenon? Are only social factors relevant for the development of creativity or should one also include material artefacts and resources in its definition? How can we explain spatial disparities of creativity without falling victim to geodeterminism? This book offers insights from various disciplines such as environmental psychology, philosophy, and social geography. It presents the results of a research conference at Heidelberg University in September 2006, which was supported by the Klaus Tschira Foundation.

The Systems Model of Creativity

Innovation is universally recognized as key components of first world economies that is vital for continued prosperity. This book presents a highly differentiated model which is capable of serving as a practical foundation for diagnosing, analyzing, optimizing and fostering creativity and innovation in a variety of organizational settings.

Milieus of Creativity

With few exceptions, scholarship on creativity has focused on its positive aspects while largely ignoring its dark side. This includes not only creativity deliberately aimed at hurting others, such as crime or terrorism, or at gaining unfair advantages, but also the accidental negative side effects of well-intentioned acts. This book brings together essays written by experts from various fields (psychology, criminal justice, sociology, engineering, education, history, and design) and with different interests (personality development, mental health, deviant behavior, law enforcement, and counter-terrorism) to illustrate the nature of negative creativity, examine its variants, call attention to its dangers, and draw conclusions about how to prevent it or protect society from its effects.

Fostering Creativity

This book presents a new model, the competency framework, for students, innovators, entrepreneurs, managers, and anyone who wants to better understand the dynamic world of innovation and entrepreneurship. Focused on both the individual and strategic organizational level, this book is about people and the competencies each person needs to learn to be successful in creating a more dynamic future. Matthews and Brueggemann's framework for innovation and entrepreneurship competencies empowers individuals to excel at innovation and new venture creation. It provides a practical guide and clear and concise understanding of the knowledge, skills, attitudes, and experiences that are needed to increase imagination, creativity, innovation and new venture creation capability. Innovation and Entrepreneurship will be attractive for students of entrepreneurship, innovation, management and cross-disciplinary classes, such as design thinking. Presented in a modular format, Innovation & Entrepreneurship informs the future direction of people and technology, as well as the educational systems producing the next generation of innovators and entrepreneurs. Based on extensive academic research, this book is organized into two sections: Twelve innovation elements and twelve competency categories. The elements are the foundation and the competency categories are the building blocks that inform our path toward a more precise understanding of how innovation and entrepreneurship plays an important role in economic development and our daily lives.

The Dark Side of Creativity

High IQs don't improve the world. Adaptive intelligence does, because it prioritizes the common good over individual success.

Innovation and Entrepreneurship

Technological advances in hardware and software provide powerful tools with the potential to design interfaces that are powerful and easy to use. Yet, the frustrations and convoluted "work-arounds" often encountered make it clear that there is substantial room for improvement. Drawn from more than 60 years of combined experience studying, implementing, and teaching about performance in human-technology systems, Display and Interface Design: Subtle Science, Exact Art provides a theoretically-based yet practical guide for ecological display and interface design. Written from the perspective of cognitive systems engineering and ecological interface design, the book delineates how to design interfaces tailored to specific work demands, leverage the powerful perception-action skills of the human, and use powerful interface technologies wisely. This triadic approach (domain, human, interface) to display and interface design stands in sharp contrast to traditional dyadic (human, interface) approaches. The authors describe general principles and specific strategies at length and include concrete examples and extensive design tutorials that illustrate quite clearly how these principles and strategies can be applied. The coverage spans the entire continuum of interfaces that might need to be developed in today's work places. The reason that good interfaces are few and far between is really quite simple: they are extremely difficult to design and build properly. While there are many books available that address display design, most of them focus on aesthetic principles but lack scientific rigor, or are descriptive but not prescriptive. Whether you are exploring the principles of interface design or designing and implementing interfaces, this book elucidates an overarching framework for design that can be applied to the broad spectrum of existing domains.

Adaptive Intelligence

Humanities for the Environment, or HfE, is an ambitious project that from 2013-2015 was funded by a generous grant from the Andrew W. Mellon Foundation. The project networked universities and researchers internationally through a system of 'observatories'. This book collects the work of contributors networked through the North American, Asia-Pacific, and Australia-Pacific observatories. Humanities for the Environment showcases how humanists are working to 'integrate knowledges' from diverse cultures and ontologies and pilot new 'constellations of practice' that are moving beyond traditional contemplative or reflective outcomes (the book, the essay) towards solutions to the greatest social and environmental challenges of our time. With the still controversial concept of the 'Anthropocene' as a starting point for a widening conversation, contributors range across geographies, ecosystems, climates and weather regimes; moving from icy, melting Arctic landscapes to the bleaching Australian Great Barrier Reef, and from an urban pedagogical 'laboratory' in Phoenix, Arizona to Vatican City in Rome. Chapters explore the ways in which humanists, in collaboration with communities and disciplines across academia, are responding to warming oceans, disappearing islands, collapsing fisheries, evaporating reservoirs of water, exploding bushfires, and spreading radioactive contamination. This

interdisciplinary work will be of great interest to scholars in the humanities, social sciences, and sciences interested in interdisciplinary questions of environment and culture.

Display and Interface Design

This handbook presents a panoramic view of the field of giftedness. It offers a comprehensive and authoritative account on what giftedness is, how it is measured, how it is developed, and how it affects individuals, societies, and the world as a whole. It examines in detail recent advances in gifted education. The handbook also presents the latest advances in the fast-developing areas of giftedness research and practice, such as gifted education and policy implications. In addition, coverage provides fresh ideas, from entrepreneurial giftedness to business talent, which will help galvanize and guide the study of giftedness for the next decade.

Humanities for the Environment

The book includes all the background material required to understand the principles underlying intelligence, as well as enough detailed information on intelligent robotics and simulated agents so readers can begin experiments and projects on their own. By the mid-1980s researchers from artificial intelligence, computer science, brain and cognitive science, and psychology realized that the idea of computers as intelligent machines was inappropriate. The brain does not run "programs"; it does something entirely different. But what? Evolutionary theory says that the brain has evolved not to do mathematical proofs but to control our behavior, to ensure our survival. Researchers now agree that intelligence always manifests itself in behavior—thus it is behavior that we must understand. An exciting new field has grown around the study of behavior-based intelligence, also known as embodied cognitive science, "new AI," and "behavior-based AI." This book provides a systematic introduction to this new way of thinking. After discussing concepts and approaches such as subsumption architecture, Braitenberg vehicles, evolutionary robotics, artificial life, self-organization, and learning, the authors derive a set of principles and a coherent framework for the study of naturally and artificially intelligent systems, or autonomous agents. This framework is based on a synthetic methodology whose goal is understanding by designing and building. The book includes all the background material required to understand the principles underlying intelligence, as well as enough detailed information on intelligent robotics and simulated agents so readers can begin experiments and projects on their own. The reader is guided through a series of case studies that illustrate the design principles of embodied cognitive science.

International Handbook on Giftedness

A COMPANION TO CREATIVE WRITING A Companion to Creative Writing is a comprehensive collection covering myriad aspects of the practice and profession of creative writing in the contemporary world. The book features contributions from an international cast of creative writers, publishers and editors, critics, translators, literary prize judges, and many other top professionals. Chapters not only consider the practice of creative writing in terms of how it is "done," but also in terms of what occurs in and around creative writing practice. Chapters address a wide range of topics including the writing of poetry and fiction; playwriting and screenwriting; writing for digital media; editing; creative writing and its engagement with language, spirituality, politics, education, and heritage. Other chapters explore the role of literary critics and ideas around authorship, as well as translation and creative writing, the teaching of creative writing, and the histories and character of the marketplace, prizes, awards, and literary events. With its unprecedented breadth of coverage, A Companion to Creative Writing is an indispensable resource for those who are undertaking creative writing, studying creative writing at any level, or considering studying creative writing.

Understanding Intelligence

Wendy Bishop and David Starkey have created a remarkable resource volume for creative writing students and other writers just getting started. In two- to ten-page discussions, these authors introduce forty-one central concepts in the fields of creative writing and writing instruction, with discussions that are accessible yet grounded in scholarship and years of experience. Keywords in Creative Writing provides a brief but comprehensive introduction to the field of creative writing through its landmark terms, exploring concerns as abstract as postmodernism and identity politics alongside very practical interests of beginning writers, like contests, agents, and royalties. This approach makes the book ideal for the college classroom as well as the writer's bookshelf, and unique in the field, combining the

pragmatic accessibility of popular writer's handbooks, with a wider, more scholarly vision of theory and research.

A Companion to Creative Writing

The essential guide for teaching beyond the test! Students with strong higher-order thinking skills are more likely to become successful, lifelong learners. Based on extensive, collaborative research by leading authorities in the field, this book shows how to implement teaching and learning strategies that nurture intelligence, creativity, and wisdom. This practical teaching manual offers an overview of the WICS model—Wisdom, Intelligence, Creativity, Synthesized—which helps teachers foster students' capacities for effective learning and problem solving. Teachers will find examples for language arts, history, mathematics, and science in Grades K–12, as well as: Hands-on strategies for enhancing students' memory, analytical, creative, and practical skills Guidelines on teaching and assessing for successful intelligence Details on how to apply the model in the classroom Teacher reflection sections, suggested readings, and sample planning checklists Teaching for Wisdom, Intelligence, Creativity, and Success is ideal for educators seeking to broaden their teaching repertoire as they expand the skills and abilities of students at all levels.

Teaching for Wisdom, Intelligence, Creativity, and Success

Nurturing Creativity in the Classroom is a groundbreaking collection of essays by leading scholars, who examine and respond to the tension that many educators face in valuing student creativity but believing that they cannot support it given the curricular constraints of the classroom. Is it possible for teachers to nurture creative development and expression without drifting into curricular chaos? Do curricular constraints necessarily lead to choosing conformity over creativity? This book combines the perspectives of top educators and psychologists to generate practical advice for considering and addressing the challenges of supporting creativity within the classroom. It is unique in its balance of practical recommendations for nurturing creativity and thoughtful appreciation of curricular constraints. This approach helps ensure that the insights and advice found in this collection will take root in educators' practice, rather than being construed as yet another demand placed on their overflowing plate of responsibilities.

The Psychology of Problem Solving

When Richard Rumelt's Good Strategy/Bad Strategy was published in 2011, it immediately struck a chord, calling out as bad strategy the mish-mash of pop culture, motivational slogans and business buzz speak so often and misleadingly masquerading as the real thing. Since then, his original and pragmatic ideas have won fans around the world and continue to help readers to recognise and avoid the elements of bad strategy and adopt good, action-oriented strategies that honestly acknowledge the challenges being faced and offer straightforward approaches to overcoming them. Strategy should not be equated with ambition, leadership, vision or planning; rather, it is coherent action backed by an argument. For Rumelt, the heart of good strategy is insight into the hidden power in any situation, and into an appropriate response - whether launching a new product, fighting a war or putting a man on the moon. Drawing on examples of the good and the bad from across all sectors and all ages, he shows how this insight can be cultivated with a wide variety of tools that lead to better thinking and better strategy, strategy that cuts through the hype and gets results.

Nurturing Creativity in the Classroom

This groundbreaking Handbook brings together leading international experts in creativity and culture research to provide an overview of current debates. It showcases the wealth of topics, approaches and definitions specific for this new, interdisciplinary field within creativity research. The theoretical and methodological innovations emerging from the joint study of creativity and culture highlight the role of creativity within today's innovation-based, multicultural societies. Drawing on theoretical and empirical reflections, including case studies from different continents and different creative domains, this Handbook provides a truly global outlook on current creativity research within an emergent, interdisciplinary field. This variety is highlighted by the Handbook's structure as it is divided into five sections:

Creativity and Culture in the Psychology of Creativity; Creativity in Socio-Cultural Psychology; Creativity in Cultural Context; Creativity and Culture in Applied Domains; Cross-disciplinary Perspectives on Creativity and Culture. These sections provide a clear overview of the debates and questions of this research area as contributors share their interest in creativity not only as an individual but also a social and cultural phenomenon, and in culture as both the foundation and outcome of creative action. The Handbook will be an essential resource for researchers, particularly those based in social science and humanities disciplines.

Good Strategy/Bad Strategy

Philosophy has inherited a powerful impulse to embrace either dualism or a reductive monism—either a radical separation of mind and body or the reduction of mind to body. But from its origins in the writings of the Stoics, the first thoroughgoing materialists, another view has acknowledged that no forms of materialism can be completely self-inclusive—space, time, the void, and sense are the incorporeal conditions of all that is corporeal or material. In *The Incorporeal* Elizabeth Grosz argues that the ideal is inherent in the material and the material in the ideal, and, by tracing its development over time, she makes the case that this same idea reasserts itself in different intellectual contexts. Grosz shows that not only are idealism and materialism inextricably linked but that this "belonging together" of the entirety of ideality and the entirety of materiality is not mediated or created by human consciousness. Instead, it is an ontological condition for the development of human consciousness. Grosz draws from Spinoza's material and ideal concept of substance, Nietzsche's amor fati, Deleuze and Guattari's plane of immanence, Simondon's preindividual, and Raymond Ruyer's self-survey or autoaffection to show that the world preexists the evolution of the human and that its material and incorporeal forces are the conditions for all forms of life, human and nonhuman alike. A masterwork by an eminent theoretician, *The Incorporeal* offers profound new insight into the mind-body problem

The Palgrave Handbook of Creativity and Culture Research

Despite the vital importance of the emerging area of biotechnology and its role in defense planning and policymaking, no definitive book has been written on the topic for the defense policymaker, the military student, and the private-sector bioscientist interested in the "emerging opportunities market" of national security. This edited volume is intended to help close this gap and provide the necessary backdrop for thinking strategically about biology in defense planning and policymaking. This volume is about applications of the biological sciences, here called "biologically inspired innovations," to the military. Rather than treating biology as a series of threats to be dealt with, such innovations generally approach the biological sciences as a set of opportunities for the military to gain strategic advantage over adversaries. These opportunities range from looking at everything from genes to brains, from enhancing human performance to creating renewable energy, from sensing the environment around us to harnessing its power.

Publisher description

Bio-Inspired Innovation and National Security

This work explores the difficulties of solving contemporary environmental problems within existing global institutions. It questions guidelines set out in recent influential policy reports, and suggests new agendas for sustainability, industrial ecology, and institutional reform. Including case studies from the USA, Europe and China, this book investigates a wide range of environmental problems presently confronting experts worldwide.

Art, the Arts, and the Great Ideas

Continuing his exploration of the substance of a basic education, Mortimer J. Adler examines the inherent values of various art forms and considers their significance within a well-rounded curriculum. He maintains that imaginative literature and works of science, philosophy, theology, and history act upon our intellects and stimulate the discussion of ideas. The non-verbal arts, which act directly and powerfully on our emotions and sentiments without the intermediation of thought, are to be valued

for their beauty, their workmanship, and the pleasure they give rather than their contributions to a body of ideas. Elucidating his ideas through the discussion of specific works, Adler concludes that an appreciation of all the human arts is essential to the development of a fully cultivated and well-educated person.

The Great Ideas ART

Seventy years ago, Mortimer Adler sat down at a manual typewriter. By his side was a list of authors, a pyramid of books and 102 great ideas—the 102 objects of thought that have collectively defined Western thought for more than 2,500 years. He began writing in alphabetical order beginning with "Angel" and ending with "World." The essays, originally published in the Syntopicon, were and remain the centerpiece of Encyclopaedia Britannica's Great Books of the Western World. These essays, never before available except as part of the Great Books, are, according to Clifton Fadiman, Adler's finest work. Each essay—"War and Peace," "Love," "God," "Truth"—treats each idea as if the original authors—from Homer to Freud, from Marcus Aurelius to Virginia Woolf—whose writings the ideas are drawn from, were sitting around a table, deep in conversation. His purely descriptive synthesis presents the key points of view on almost 3,000 questions without endorsing or favoring any one of them. More than a thousand pages, containing more than half a million words on more than two millennia of Western thought, The Great Ideas is a fitting capstone to the career of Mortimer J. Adler. The actual writing of the essays took 26 months, seven days a week and no vacations or recesses... Writing the 102 essays was like writing 102 books. I think it was the most arduous and demanding stint of writing I have ever undertaken. —Mortimer J. Adler

The Art Book

This volume has been brought together to generate new ideas and provoke discussion about what constitutes arts education in the twenty-first century, both within the institution and beyond. Art, Artists and Pedagogy is intended for educators who teach the arts from early childhood to tertiary level, artists working in the community, or those studying arts in education from undergraduate to Masters or PhD level. From the outset, this book is not only about arts in practice but also about what distinguishes the 'arts' in education. Exploring two different philosophies of education, the book asks what the purpose of the arts is in education in the twenty-first century. With specific reference to the work of Gert Biesta, questions are asked as to the relation of the arts to the world and what kind of society we may wish to envisage. The second philosophical set of ideas comes from Deleuze and Guattari, looking in more depth at how we configure art, the artist and the role played by the state and global capital in deciding on what art education has become. This book provides educators with new ways to engage with arts, focusing specifically on art, music, dance, drama and film studies. At a time when many teachers are looking for a means to re-assert the role of the arts in education this text provides many answers with reference to case studies and in-depth arguments from some of the world's leading academics in the arts, philosophy and education.

The Artist's Way

Arts & Ideas

In a series of 50 accessible essays, Susie Hodge introduces and explains the central concepts that underpin Western art and design. From Romanesque to Realism, Pop Art to Pluralism, 50 Art Ideas is a complete introduction to the most important art concepts in history.

Great Ideas of the Renaissance

The history of aesthetics, like the histories of other sciences, may be treated in a two-fold manner: as the history of the men who created the field of study, or as the history of the questions that have been raised and resolved in the course of its pursuit. The earlier History of Aesthetics (3 volumes, 1960-68, English-language edition 1970-74) by the author of the present book was a history of men, of writers and artists who in centuries past have spoken up concerning beauty and art, form and creativity. The present book returns to the same subject, but treats it in a different way: as the history of aesthetic questions, concepts, theories. The matter of the two books, the previous and the present, is in part the same; but only in part: for the earlier book ended with the 17th century, while the present one brings the subject up to our own times. And from the 18th century to the 20th much happened in aesthetics; it was only in that period that aesthetics achieved recognition as a separate science, received a name of its own, and produced theories that early scholars and artists had never dreamed of.

Cybernetics, Art, and Ideas

Where do great artists get their inspiration? And how could they help you make something extraordinary? In *You Are an Artist*, over fifty artists from around the world share their creative techniques, and give you brilliantly imaginative exercises to inspire you to make your own art. Among other things, you'll invent imaginary friends, construct a landscape, find the quietest place, measure your history and become someone else (or at least try). You don't need special materials or experience. Your only challenge is to create art that reflects the world as you see it. Curator Sarah Urist Green brings together more than 50 assignments gathered from some of the most innovative creators working today, including Sonya Clark, Michelle Grabner, The Guerrilla Girls, Fritz Haeg, Pablo Helguera, Nina Katchadourian, Toyin Ojih Odutola, J. Morgan Puett, Dread Scott, Alec Soth, Gillian Wearing, and many others.

50 Art Ideas

Whether you want to marble paper, stamp on fabric, or etch into wood, *Playing with Surface Design: Modern Techniques for Painting, Stamping, Printing and More* will provide endless inspiration.

A History of Six Ideas

Ideas About Art is an intelligent, accessible introductory text for students interested in learning how to think about aesthetics. It uses stories drawn from the experiences of individuals involved in the arts as a means of exposing readers to the philosophies, theories, and arguments that shape and drive visual art. An accessible, story-driven introduction to aesthetic theory and philosophy Prompts readers to develop independent ideas about aesthetics; this is a guide on how to think, not what to think Includes discussions of non-western, contemporary, and discipline-specific theories Examines a range of art-based dilemmas across a wide variety of disciplines - from art and design and law to visual and museum studies

Art Into Ideas

The author analyses the relation between the Idealist conception of the arts (including literature) and present-day reality. The aim is to create a link between past and present artistic practices and philosophical thinking. The author questions Idealist notions of history and the relation between the theoretical, the aesthetic and the practical.

Playing with Surface Design

The Great Artists introduces readers to 100 of the world's most important artists, from the 13th century to the present, concentrating on their lives, works, ideas, influences, artistic development, contributions, creative output and where they fit in history. Concise and readable, *The Great Artists* is an interesting, informative and authoritative history of 700 years of fine art for the general reader. Writing with verve and passion, Susie Hodge presents, in chronological order, elegant and often affectionate biographical profiles of 100 of the greatest artists in the history of art. The biographies not only describe the life, development and creations of each artist, but also set these visual composers and their compositions within a broader historical and cultural context. Furthermore, shortlists of 'must-see' masterpieces for each artist give the reader all the information they need to appreciate and understand great art. From the great artists of the high renaissance art to the Dutch masters, and from the rococo and neoclassical movements of the 18th century to romanticism, modernism and contemporary art, the lives of the great artists are as varied and multifaceted as the works of creative genius they produced. A selection of featured artists includes: Mantegna, El Greco, Pissarro, Turner, Seurat, Bellini, Caravaggio, Leighton, Constable, Mucha, Botticelli, Rubens, Manet, Ingres, Klimt, Bosch, Gentileschi, Degas, Géricault, Munch, da Vinci, Poussin, Whistler, Corot, Kandinsky, Grünewald, Velazquez, Homer, Hiroshige, Matisse, Dürer, Rembrandt, Cézanne, Delacroix, Mondrian, Michelangelo, Steenwyck, Monet, Millet, Malevich, Raphael, de Hooch, Rodin, Courbet, Klee, Titian, Vermeer, Renoir, Bouguereau, Marc, Holbein, Canaletto, Gauguin, Rossetti, Picasso, Bronzino, Hogarth, van Gogh, Millais, Hopper.

Ideas About Art

John Ruskins insights into the need for individual artistic freedom, and his disdain for the mass-production art of the Victorian era, radically altered society's perception of creative design and remain powerfully relevant to our ideas of beauty today.

Arts with Or Without Ideas

In *One and Five Ideas* eminent critic, historian, and former member of the Art & Language collective Terry Smith explores the artistic, philosophical, political, and geographical dimensions of Conceptual Art and conceptualism. These four essays and a conversation with Mary Kelly—published between 1974 and 2012—contain Smith's most essential work on Conceptual Art and his argument that conceptualism was key to the historical transition from modern to contemporary art. Nothing less than a distinctive theory of Conceptual and contemporary art, *One and Five Ideas* showcases the critical voice of one of the major art theorists of our time.

Achieving Great Art for Everyone

As schools are being encouraged to develop more flexible and creative approaches to education, *Using the Visual Arts for Cross-curricular Teaching and Learning* provides practical guidance and ideas on using the visual arts as a starting point for imaginative, effective learning across a wide range of curriculum subjects. Underpinned by established and current educational thinking, it uses real-life examples to explore how this approach has been used successfully by individual class teachers and as whole-school projects. Offering proven strategies supporting the principles of personalized learning, it will help you involve children in devising cross-curricular themes and setting their own lines of enquiry. Supplemented throughout with case studies and ideas for great artworks to get projects started, as well as examples of children's own work, it explores: developing individual pupils' talent and respect for their own and other cultures; using a single painting as a starting point for learning in a range of subjects; finding inspiration for your own cross-curricular projects using the visual arts; underpinning all activities with educational purpose; planning for and assessing progression in learning; discovering and using art resources in your region. The tried and tested strategies in *Using the Visual Arts for Cross-curricular Teaching and Learning* will give all primary school teachers the confidence to explore the benefits of placing the visual arts at the centre of a creative, appealing curriculum.

One and Five Ideas

"An original and beautiful book. It suggests that the surest way to liberate ourselves is through the power of our ideas." —Nelson Mandela Foundation "This is not just one of those books that makes you think. It challenges you to think. It demands that you think, and to beware of all those obstacles that would stop you from trusting your instincts and finding an idea." —Lee Clow, Global Director of Media Arts, TBWA\Chiat Day As an award-winning playwright, author, and Worldwide Creative Director of TBWA, John Hunt has witnessed again and again the power of original thinking to transform both companies and individuals. In *The Art of the Idea*, Hunt addresses everyone from the global boardroom to the man on the street, bridging the gap with ease. Few can argue with Hunt's claim that it is ideas that move the world forward, and he refreshingly articulates that anyone can play: there is no hierarchy to original thinking. *The Art of the Idea* provides a toolbox for achieving excellence and offers a new way of defining your world. By illustrating how to create space so ideas can breathe, it provides a lifeline to those who find themselves stuck in a rut. Unassuming, original, and accessible, the publication includes insights by this leader in creative thinking, and is accompanied by 20 original paintings and collages by the internationally acclaimed South African artist Sam Nhlengethwa. *The Art of the Idea* grants permission to trust our instincts, endure initial ridicule, and practice thinking as a team sport. Whatever your idea is about ideas, this book will change it.
