Taste and the Ancient Senses

Olives, bread, meat and wine: it is deceptively easy to evoke ancient Greece and Rome through a few items of food and drink. But how were their tastes different from ours? How did they understand the sense of taste itself, in relation to their own bodies and to other modes of sensory experience? This volume, the first of its kind to explore the ancient sense of taste, draws on the literature, philosophy, history and archaeology of Greco-Roman antiquity to provide answers to these central questions. By surveying and probing the literary and material remains from the Archaic period to late antiquity, contributors investigate the cultural and intellectual development towards attitudes and theories about taste. These specially commissioned chapters also open a window onto ancient thinking about perception and the body. Importantly, these authors go beyond exploring the functional significance of taste to uncover its value and meaning in the actions, thoughts and words of the Greeks and Romans. Taste and the Ancient Senses presents a full range of interpretative approaches to the gustatory sense, and provides an indispensable resource for students and scholars of classical antiquity and sensory studies.

Smell and the Ancient Senses

From flowers and perfumes to urban sanitation and personal hygiene, smell—a sense that is simultaneously sublime and animalistic—has played a pivotal role in western culture and thought. Greek and Roman writers and thinkers lost no opportunity to connect the smells that bombarded their senses to the social, political and cultural status of the individuals and environments that they encountered: godly incense and burning sacrifices, seductive scents, aromatic cuisines, stinking bodies, pungent farmyards and festering back-streets. The cultural study of smell has largely focused on pollution, transgression and propriety, but the olfactory sense came into play in a wide range of domains and activities: ancient medicine and philosophy, religion, botany and natural history, erotic literature, urban planning, dining, satire and comedy—where odours, aromas, scents and stench were rich and versatile components of the ancient sensorium. The first comprehensive introduction to the role of smell in the history, literature and society of classical antiquity, Smell and the Ancient Senses explores and

probes the ways that the olfactory sense can contribute to our perceptions of ancient life, behaviour, identity and morality.

Sight and the Ancient Senses

It is to Greek critical thinking about seeing that we owe our conceptual framework for theorizing the senses, and it is also to such thinking that we owe the lasting legacy of Greco-Roman imagery. *Sight and the Ancient Senses* is the first thorough introduction to the conceptualization of sight in the history, visual culture, literature and philosophy of classical antiquity. Examining how the Greeks and Romans interpreted what they saw, the collection also considers sight in relation to the other senses. This volume brings together a number of interdisciplinary perspectives to deliver a broad and balanced coverage of this subject. Contributors explore the cultural, social and intellectual backdrops that gave rise to ancient theories of seeing, from Archaic Greece through to the advent of Christianity in late antiquity. This series of specially commissioned thematic chapters demonstrate how theories about sight informed Graeco-Roman philosophy, science, poetry rhetoric and art. The collection also reaches beyond its Graeco-Roman visual framework, showcasing how ancient ideas have influenced the *longue durée* of western sensory thinking. Richly illustrated throughout, including a section of color plates, *Sight and the Ancient Senses* is a wide-ranging introduction to ancient theories of seeing which will be an invaluable resource for students and scholars of classical antiquity.

A Cultural History of the Senses in Antiquity

The ancient world used the senses to express an enormous range of cultural meanings. Indeed the senses were functionally significant in all aspects of ancient life, often in ways that were complex and interconnected. Antiquity was also a period where the senses were experienced vividly: cities stank, statues were brightly painted and literature made full use of sensory imagery to create its effects. In a steeply hierarchical world, with vast differences between the landed wealthy, the poor and the slaves, the senses played a key role in establishing and maintaining boundaries between social groups; but the use of the senses in the ancient world was not static. New religions, such as Christianity, developed their own way of using the senses, acquiring unique forms of sensory-related symbolism in processes which were slow and often contested. The aim of this volume is to provide an overview of these structures and developments and to show how their study can yield a more nuanced understanding of the ancient world. *A Cultural History of the Senses in Antiquity* presents essays on the following topics: the social life of the senses; urban sensations; the senses in the marketplace; the senses in religion; the senses in philosophy and science; medicine and the senses; the senses in literature; art and the senses; and sensory media.

Touch and the Ancient Senses

Unlike the other senses, touch ranges beyond a single sense organ, encompassing not only the skin but also the interior of the body. It mediates almost every aspect of interpersonal relations in antiquity, from the everyday to the erotic, just as it also provides a primary point of contact between the individual and the outside world. The essays in this volume explore the ways in which touch plays a defining role in science, art, philosophy, and medicine, and shapes our understanding of topics ranging from aesthetics and poetics to various religious and ritual practices. Whether we locate the sense of touch on the surface of the skin, within the body or – less tangibly still – within the emotions, the sensory impact of touching raises a broad range of interpretive and phenomenological questions. This is the first volume of its kind to explore the sense of touch in antiquity, bringing a variety of disciplinary approaches to bear on the sense that is usually disregarded as the most base and obvious of the five. In these pages, by contrast, we find in touch a complex and fascinating indicator of the body's relation to object, environment, and self.

Synaesthesia and the Ancient Senses

Like us, the ancient Greeks and Romans came to know and understand the world through their senses. Yet sensory experience has rarely been considered in the study of antiquity and, when the senses are examined, sight is regularly privileged. *'Synaesthesia and the Ancient Senses'* presents a radical reappraisal of antiquity's textures, flavours, and aromas, sounds and sights. It offers both a fresh look at society in the ancient world and an opportunity to deepen the reading of classical literature. The book will appeal to readers in classical society and literature, philosophy and cultural history. All Greek and Latin is translated and technical matters are explained for the non-specialist. The introduction sets

the ancient senses within the history of aesthetics and the subsequent essays explores the senses throughout the classical period and on to the modern reception of classical literature.

SENSORIVM: The Senses in Roman Polytheism

SENSORIVM publishes the first results of a collective investigation into how Roman rituals smelled, sounded, felt and struck the eye. It brings Roman religious experience into the realm of the senses.

A History of the Senses

This path-breaking book examines our attitudes to the senses from antiquity through to the present day. Robert Jutte explores a wealth of different traditions, images, metaphors and ideas that have survived through time and describes how sensual impressions change the way in which we experience the world. Throughout history, societies have been both intrigued or unsettled by the five senses. The author looks at the way in which the social world conditions our perception and traces the 'rediscovery' of sensual pleasure in the twentieth century, paying attention to experiences as varied as fast food, deoderization, and extra-sensory perception. He concludes by exploring technological change and cyberspace, reflecting on how developments in these fields will affect our relationship with the senses in the future.

The Routledge Handbook of the Senses in the Ancient Near East

This Handbook is a state-of-the-field volume containing diverse approaches to sensory experience, bringing to life in an innovative, remarkably vivid, and visceral way the lives of past humans through contributions that cover the chronological and geographical expanse of the ancient Near East. It comprises thirty-two chapters written by leading international contributors that look at the ways in which humans, through their senses, experienced their lives and the world around them in the ancient Near East, with coverage of Anatolia, Egypt, the Levant, Mesopotamia, Syria, and Persia, from the Neolithic through the Roman period. It is organised into six parts related to sensory contexts: Practice, production, and taskscape; Dress and the body; Ritualised practice and ceremonial spaces; Death and burial; Science, medicine, and aesthetics; and Languages and semantic fields. In addition to exploring what makes each sensory context unique, this organisation facilitates cross-cultural and cross-chronological, as well as cross-sensory and multisensory comparisons and discussions of sensory experiences in the ancient world. In so doing, the volume also enables considerations of senses beyond the five-sense model of Western philosophy (sight, hearing, touch, taste, and smell), including proprioception and interoception, and the phenomena of synaesthesia and kinaesthesia. The Routledge Handbook of the Senses in the Ancient Near East provides scholars and students within the field of ancient Near Eastern studies new perspectives on and conceptions of familiar spaces, places, and practices, as well as material culture and texts. It also allows scholars and students from adjacent fields such as Classics and Biblical Studies to engage with this material, and is a must-read for any scholar or student interested in or already engaged with the field of sensory studies in any period.

A Sensory History of Ancient Warfare

How can we attempt to understand the experience of those involved in ancient battles, sieges and campaigns? What was the visual impact of seeing the massed ranks of the enemy approaching or the sky darkened with their arrows? How did it feel to be trapped in the press of bodies as phalanxes clashed shield to shield? What of the taste of dust on the march or the smell of split blood and entrails? What of the rumble of approaching cavalry, the clash of iron weapons and the screams of the dying? The assault on all five senses which must have occurred is the subject of this innovative book. Sensory history is a new approach that attempts to understand the full spectrum of the experience of the participants in history. Conor Whately is the first to apply the discipline in a dedicated study of warfare in the classical world. He draws on literary, archaeological, reconstructive and comparative evidence to understand the human experience of the ancient battlefield in unprecedented depth.

Senses of the Empire

The Roman empire afforded a kaleidoscope of sensations. Through a series of multisensory case studies centred on people, places, buildings and artefacts, and on specific aspects of human behaviour, this volume develops ground-breaking methods and approaches for sensory studies in Roman archaeology and ancient history. Authors explore questions such as: what it felt like, and symbolised, to

be showered with saffron at the amphitheatre; why the shape of a dancer's body made him immediately recognisable as a social outcast; how the dramatic gestures, loud noises and unforgettable smells of a funeral would have different meanings for members of the family and for bystanders; and why feeling the weight of a signet ring on his finger contributed to a man's sense of identity. A multisensory approach is taken throughout, with each chapter exploring at least two of the senses of sight, hearing, smell, taste and touch. The contributors' individual approaches vary, reflecting the possibilities and the wide application of sensory studies to the ancient world. Underlying all chapters is a conviction that taking a multisensory approach enriches our understanding of the Roman empire, but also an awareness of the methodological problems encountered when reconstructing past experiences.

A Cultural History of the Senses

What did the past sound like, taste like, smell like? How did it look and feel? How did people make sense of the world through their senses? These are questions which are increasingly capturing the interest of historians. *A Cultural History of the Senses* delves into the sensory foundations of Western civilization, taking a comprehensive period-by-period approach, which provides a broad understanding of the life of the senses from antiquity to the modern day. The volumes treat such topics as the sensory markers of gender and class, the aesthetic dimensions of material culture, religious sensibilities, the medical uses of the senses and their representation in art and literature. These investigations bring out the sensations and values which defined experience in a particular era and shaped the world view of the time. With contributions from such prominent scholars as Peter Burke, Alain Corbin, Anthony Wallace-Hadrill and Chris Woolgar, *A Cultural History of the Senses* sets the stage for a vital new way of understanding the past. *A Cultural History of the Senses* presents an authoritative survey from ancient times to the present. This set of six volumes explores the cultural life of the senses in the West over a span of 2500 years: 1. *A Cultural History of the Senses in Antiquity, 500 BCE-500 CE* 2. *A Cultural History of the Senses in the Middle Ages, 500-1450* 3. *A Cultural History of the Senses in the Renaissance, 1450-1650* 4. *A Cultural History of the Senses in the Age of Enlightenment, 1650-1800* 5. *A Cultural History of the Senses in the Age of Empire, 1800-1920* 6. *A Cultural History of the Senses in the Modern Age, 1920-2000* Each volume discusses the same themes in its chapters: *The Social Life of the Senses*; *Urban Sensations*; *The Senses in the Marketplace*; *The Senses in Religion*; *The Senses in Philosophy and Science*; *Medicine and the Senses*; *The Senses in Literature*; *Art and the Senses*; and *Sensory Media*. This structure means that readers can either have a broad overview of a period or follow a theme through history by reading the relevant chapter in each volume. Superbly illustrated, the full six volume set combines to present the most authoritative and comprehensive survey available on the senses in history.

Capturing the Senses

This open-access book surveys how digital technology can contribute effectively to improving our understanding of the past, through a sensory engagement based on the evidence of material culture. In particular, it encourages specialists to consider senses and human agency as important factors in studying ancient space, while recognising the role played by digital tools in enhancing a human-centred form of analysis. Significant advances in archaeological computing, digital methods, and sensory approaches have led archaeologists to rethink strategies and methods for creating narratives of the past. Recent progress in data visualisation and implementation, as well as other nascent digital sensory methods, means that it is now easier to explore and experience ancient space from a multiscalar perspective, from the individual body or single building to the wider landscape. The chapters in *Capturing the Senses: Digital Methods for Sensory Archaeologies* present innovative methods for representing an embodied experience of ancient space, simulating (but not recreating) ancient behaviours and social interaction. Chapters cover topics including the potentials and pitfalls of visualising, recreating, and re-enacting/experiencing the senses in Virtual Reality environments and also digital reconstructions and auralisations of ancient spaces to study sound sensory perception. Overall, the book demonstrates that multisensory approaches can give a new perspective on how ancient spaces were intended to be used by inhabitants to fulfil a series of purposes including conveying messages and regulating movement. This is an open-access book.

Sight and the Ancient Senses

It is to Greek critical thinking about seeing that we owe our conceptual framework for theorizing the senses, and it is also to such thinking that we owe the lasting legacy of Greco-Roman imagery. Sight

and the Ancient Senses is the first thorough introduction to the conceptualization of sight in the history, visual culture, literature and philosophy of classical antiquity. Examining how the Greeks and Romans interpreted what they saw, the collection also considers sight in relation to the other senses. This volume brings together a number of interdisciplinary perspectives to deliver a broad and balanced coverage of this subject. Contributors explore the cultural, social and intellectual backdrops that gave rise to ancient theories of seeing, from Archaic Greece through to the advent of Christianity in late antiquity. This series of specially commissioned thematic chapters demonstrate how theories about sight informed Graeco-Roman philosophy, science, poetry rhetoric and art. The collection also reaches beyond its Graeco-Roman visual framework, showcasing how ancient ideas have influenced the *longue durée* of western sensory thinking. Richly illustrated throughout, including a section of color plates, *Sight and the Ancient Senses* is a wide-ranging introduction to ancient theories of seeing which will be an invaluable resource for students and scholars of classical antiquity.

Bodily Fluids in Antiquity

From ancient Egypt to Imperial Rome, from Greek medicine to early Christianity, this volume examines how human bodily fluids influenced ideas about gender, sexuality, politics, emotions, and morality, and how those ideas shaped later European thought. Comprising 24 chapters across seven key themes—language, gender, eroticism, nutrition, dissolution, death, and afterlife—this volume investigates bodily fluids in the context of the current sensory turn. It asks fundamental questions about physicality and fluidity: how were bodily fluids categorised and differentiated? How were fluids trapped inside the body perceived, and how did this perception alter when those fluids were externalised? Do ancient approaches complement or challenge our modern sensibilities about bodily fluids? How were religious practices influenced by attitudes towards bodily fluids, and how did religious authorities attempt to regulate or restrict their appearance? Why were some fluids taboo, and others cherished? In what ways were bodily fluids gendered? Offering a range of scholarly approaches and voices, this volume explores how ideas about the body and the fluids it contained and externalised are culturally conditioned and ideologically determined. The analysis encompasses the key geographic centres of the ancient Mediterranean basin, including Greece, Rome, Byzantium, and Egypt. By taking a *longue durée* perspective across a richly intertwined set of territories, this collection is the first to provide a comprehensive, wide-ranging study of bodily fluids in the ancient world. *Bodily Fluids in Antiquity* will be of particular interest to academic readers working in the fields of classics and its reception, archaeology, anthropology, and ancient to Early Modern history. It will also appeal to more general readers with an interest in the history of the body and history of medicine. Food, Virtue, and the Shaping of Early Christianity

Greco-Roman food culture provides important concepts, grounded in everyday experience, which allow ordinary Christians to define virtue and create community.

Sensing the Past

"Smith's history of the sensate is destined to precipitate a revolution in our understanding of the sensibilities that underpinned the mentalities of past epochs."--David Howes, author of *Sensual Relations: Engaging the Senses in Culture and Social Theory* "Mark M. Smith presents a far-ranging essay on the history of the senses that serves simultaneously as a good introduction to the historiography. If one feels in danger of sensory overload from this growing body of scholarship, Smith's piece is a useful preventive."--Leigh E. Schmidt, author of *Restless Souls: The Making of American Spirituality* "This is a masterful overview. The history of the senses has been a frontier field for a while now. Mark Smith draws together what we know, with an impressive sensory range, and encourages further work. A really exciting survey."--Peter N. Stearns, author of *American Fear: The Causes and Consequences of High Anxiety* "Who would ever have guessed that a book on the history of the senses--seeing, hearing, touching, tasting, and smelling--could be informative, thought-provoking, and, at the same time, most entertaining? Ranging in both time and locale, Mark Smith's *Sensing the Past* makes even the philosophy about the senses from ancient times to now both learned and exciting. This work will draw scholars into under-recognized subjects and lay readers into a world we simply but unwisely take for granted."--Bertram Wyatt-Brown, author of *Southern Honor: Ethics and Behavior in the Old South* "Mark M. Smith has a good record of communicating his research to a broad constituency

within and beyond the academy . . . This will be required reading for anyone addressing sensory history."--Penelope Gouk, author of *Music, Science and Natural Magic in Seventeenth Century England* "This is a fine cultural history of the body, which takes Western and Eastern traditions and their texts quite seriously. Smith views a history of the senses not only from 'below' but places it squarely in the historical imagination. It will be of interest to a wide range of readers."--Sander L. Gilman, author of *Difference and Pathology*

Aesthetic Value in Classical Antiquity

Thinking about sensory experiences and evaluating human artifacts is an important part of Western European cultural and intellectual history. This book investigates from different perspectives the origins of this practice and the rich discourse of aesthetic value in classical antiquity.

Making Sense of Taste

Taste, perhaps the most intimate of the five senses, has traditionally been considered beneath the concern of philosophy, too bound to the body, too personal and idiosyncratic. Yet, in addition to providing physical pleasure, eating and drinking bear symbolic and aesthetic value in human experience, and they continually inspire writers and artists. Carolyn Korsmeyer explains how taste came to occupy so low a place in the hierarchy of senses and why it is deserving of greater philosophical respect and attention. Korsmeyer begins with the Greek thinkers who classified taste as an inferior, bodily sense; she then traces the parallels between notions of aesthetic and gustatory taste that were explored in the formation of modern aesthetic theories. She presents scientific views of how taste actually works and identifies multiple components of taste experiences. Turning to taste's objects—food and drink—she looks at the different meanings they convey in art and literature as well as in ordinary human life and proposes an approach to the aesthetic value of taste that recognizes the representational and expressive roles of food. Korsmeyer's consideration of art encompasses works that employ food in contexts sacred and profane, that seek to whet the appetite and to keep it at bay; her selection of literary vignettes ranges from narratives of macabre devouring to stories of communities forged by shared eating.

Multisensory Living in Ancient Rome

Classicists have long wondered what everyday life was like in ancient Greece and Rome. How, for example, did the slaves, visitors, inhabitants or owners experience the same home differently? And how did owners manipulate the spaces of their homes to demonstrate control or social hierarchy? To answer these questions, Hannah Platts draws on a diverse range of evidence and an innovative amalgamation of methodological approaches to explore multisensory experience – auditory, olfactory, tactile, gustatory and visual – in domestic environments in Rome, Pompeii and Herculaneum for the first time, from the first century BCE to the second century CE. Moving between social registers and locations, from non-elite urban dwellings to lavish country villas, each chapter takes the reader through a different type of room and offers insights into the reasons, emotions and cultural factors behind perception, recording and control of bodily senses in the home, as well as their sociological implications. *Multisensory Living in Ancient Rome* will appeal to all students and researchers interested in Roman daily life and domestic architecture.

Food and Transformation in Ancient Mediterranean Literature

New research that transforms how to understand food and eating in literature Meredith J. C. Warren identifies and defines a new genre in ancient texts that she terms hierophagy, a specific type of transformational eating where otherworldly things are consumed. Multiple ancient Mediterranean, Jewish, and Christian texts represent the ramifications of consuming otherworldly food, ramifications that were understood across religious boundaries. Reading ancient texts through the lens of hierophagy helps scholars and students interpret difficult passages in Joseph and Aseneth, 4 Ezra, Revelation 10, and the Persephone myths, among others. Features: Exploration of how ancient literature relies on bending, challenging, inverting, and parodying cultural norms in order to make meaning out of genres Analysis of hierophagy as social action that articulates how patterns of communication across texts and cultures emerge and diverge A new understanding of previously confounding scenes of literary eating

Sound and the Ancient Senses

Sound leaves no ruins and no residues, even though it is experienced constantly. It is ubiquitous but fleeting. Even silence has sound, even absence resonates. Sound and the Ancient Senses aims to hear the lost sounds of antiquity, from the sounds of the human body to those of the gods, from the bathhouse to the Forum, from the chirp of a cicada to the music of the spheres. Sound plays so great a role in shaping our environments as to make it a crucial sounding board for thinking about space and ecology, emotions and experience, mortality and the divine, orality and textuality, and the self and its connection to others. From antiquity to the present day, poets and philosophers have strained to hear the ways that sounds structure our world and identities. This volume looks at theories and practices of hearing and producing sounds in ritual contexts, medicine, mourning, music, poetry, drama, erotics, philosophy, rhetoric, linguistics, vocality, and on the page, and shows how ancient ideas of sound still shape how and what we hear today. As the first comprehensive introduction to the soundscapes of antiquity, this volume makes a significant contribution to the burgeoning fields of sound and voice studies and is the final volume of the series, *The Senses in Antiquity*.

The Rediscovery of Antiquity

Classical Archaeologists, art historians and artists consider the Role of the Artist' in the rediscovery of the past.

Thomas Jefferson, the Classical World, and Early America

Thomas Jefferson read Latin and Greek authors throughout his life and wrote movingly about his love of the ancient texts, which he thought should be at the core of America's curriculum. Yet at the same time, Jefferson warned his countrymen not to look to the ancient world for modern lessons and deplored many of the ways his peers used classical authors to address contemporary questions. As a result, the contribution of the ancient world to the thought of America's most classically educated Founding Father remains difficult to assess. This volume brings together historians of political thought with classicists and historians of art and culture to find new approaches to the difficult questions raised by America's classical heritage. The essays explore the classical contribution to different aspects of Jefferson's thought and taste, as well as examining the significance of the ancient world to America in a broader historical context. The diverse interests and methodologies of the contributors suggest new ways of approaching one of the most prominent and contested of the traditions that helped create America's revolutionary republicanism. The Sense of Taste

'The Sense of Taste' is a treatise on the gustatory system by two Columbia University psychologists, H. L. Hollingworth and A. T. Poffenberger. The authors regarded the sense of taste to be in numerous ways the most paradoxical of all the senses. Although, as a source of sense impression, it can afford the keenest immediate feelings of pleasure and delight, the books on aesthetics and art have little or nothing to say about it. Skill in the compounding of tastes and flavors, or discrimination in their relish, brings the expert neither artistic recognition nor social eminence. Taste, it is constantly asserted, is one of the "lower senses," and neither in the enjoyment of it nor the ministrations to it is there to be acquired the merit and general esteem that readily distinguish an art from a service.

The Frame in Classical Art

This book reveals how 'marginal' aspects of Graeco-Roman art play a fundamental role in shaping and interrogating ancient and modern visual culture.

SENSORIVM

"SENSORIVM: The Senses in Roman Polytheism explores how a range of cults and rituals were perceived and experienced by participants through one or more senses. The present collection brings together papers from an international group of researchers all inspired by 'the sensory turn'. Focusing on a wide range of ritual traditions from around the ancient Roman world, they explore the many ways

in which smell and taste, sight and sound, separately and together, involved participants in religious performance. Music, incense, images and colors, contrasts of light and dark played as great a role as belief or observance in generating religious experience. Together they contribute to an original understanding of the Roman sensory universe, and add an embodied perspective to the notion of Lived Ancient Religion. Contributors are Martin Devecka; Visa Helenius; Yulia Ustinova; Attilio Mastrocinque; Maik Patzelt; Mark Bradley; Adeline Grand-Clément; Rocío Gordillo Hervás; Rebeca Rubio; Elena Muñoz Grijalvo; David Espinosa-Espinosa; A. César González-García, Marco V. García-Quintela; Jörg Rüpke; Rosa Sierra del Molino; Israel Campos Méndez; Valentino Gasparini; Nicole Belayche; Antón Alvar Nuño; Jaime Alvar Ezquerro; Clelia Martínez Maza"--

Lived Religion in the Ancient Mediterranean World

The Lived Ancient Religion project has radically changed perspectives on ancient religions and their supposedly personal or public character. This volume applies and further develops these methodological tools, new perspectives and new questions. The religious transformations of the Roman Imperial period appear in new light and more nuances by comparative confrontation and the integration of many disciplines. The contributions are written by specialists from a variety of disciplinary contexts (Jewish Studies, Theology, Classics, Early Christian Studies) dealing with the history of religion of the Mediterranean, West-Asian, and European area from the (late) Hellenistic period to the (early) Middle Ages and shaped by their intensive exchange. From the point of view of their respective fields of research, the contributors engage with discourses on agency, embodiment, appropriation and experience. They present innovative research in four fields also of theoretical debate, which are "Experiencing the Religious", "Switching the Code", „A Thing Called Body“ and "Commemorating the Moment".

Clement of Alexandria and the Judgement of Taste

J. M. F. Heath reads Clement of Alexandria's *Paedagogus* alongside modern approaches to the judgement of taste and aesthetics to show how Clement's forming of the tastes and habits of his audience was vital to early Christian beliefs and practices. In turn, the book also develops a theological response to Pierre Bourdieu's theory of taste.

Epic Echoes in *The Wind in the Willows*

This book explores Grahame's engagements with classical antiquity in *The Wind in the Willows*, including ancient epic, parody (*Batrachomyomachia*), and pastoral imagery. Irby demonstrates how subtle echoes – such as the structure into 12 books, arming scenes, epic catalogues, anabases and katabases, lying tales, Toad's "cleverness"—cumulatively suggest a link between *The Wind in the Willows* and classical literature. This study offers the first sustained treatment of classical allusions in *The Wind in the Willows*, considering the entire novel, not isolated scenes, building on existing scholarship to yield an interpretation through the lens of classical literature and its reception in Victorian and Edwardian England. This volume will provide a unique resource for students and scholars of classical reception and literature, as well as comparative literature, English literature, children's literature, gender studies, and Grahame's writing.

The Ancient Guide to Modern Life

It's time for us to re-examine the past. Our lives are infinitely richer if we take the time to look at what the Greeks and Romans have given us in politics and law, religion and philosophy and education, and to learn how people really lived in Athens, Rome, Sparta and Alexandria. This is a book with a serious point to make but the author isn't simply a classicist but a comedian and broadcaster who has made television and radio documentaries about humour, education and Dorothy Parker. This is a book for us all. Whether political, cultural or social, there are endless parallels between the ancient and modern worlds. Whether it's the murder of Caesar or the political assassination of Thatcher; the narrative arc of the hit HBO series *The Wire* or that of *Oedipus*; the popular enthusiasm for the Emperor Titus or President Obama - over and over again we can be seen to be living very much like people did 2,000 or more years ago.

History of the Art of Antiquity

"Translation of a foundational text for the disciplines of art history and archaeology. Offers a systematic history of art in ancient Egypt, Persia, Etruria, Rome, and, above all, Greece that synthesizes the visual and written evidence then available"--Provided by publisher.

The Shock of the Ancient

The cultural battle known as the Quarrel of the Ancients and Moderns served as a sly cover for more deeply opposed views about the value of literature and the arts. One of the most public controversies of early modern Europe, the Quarrel has most often been depicted as pitting antiquarian conservatives against the insurgent critics of established authority. *The Shock of the Ancient* turns the canonical vision of those events on its head by demonstrating how the defenders of Greek literature—rather than clinging to an outmoded tradition—celebrated the radically different practices of the ancient world. At a time when the constraints of decorum and the politics of French absolutism quashed the expression of cultural differences, the ancient world presented a disturbing face of otherness. Larry F. Norman explores how the authoritative status of ancient Greek texts allowed them to justify literary depictions of the scandalous. *The Shock of the Ancient* surveys the diverse array of aesthetic models presented in these ancient works and considers how they both helped to undermine the rigid codes of neoclassicism and paved the way for the innovative philosophies of the Enlightenment. Broadly appealing to students of European literature, art history, and philosophy, this book is an important contribution to early modern literary and cultural debates.

The Art of the Body

The art of the human body is arguably the most important and wide-ranging legacy bequeathed to us by Classical antiquity. Not only has it directed the course of western image-making, it has shaped our collective cultural imaginary - as ideal, antitype, and point of departure. This book is the first concerted attempt to grapple with that legacy: it explores the complex relationship between Graeco-Roman images of the body and subsequent western engagements with them, from the Byzantine icon to Venice Beach (and back again). Instead of approaching his material chronologically, Michael Squire faces up to its inherent modernity. Writing in a lively and accessible style, and supplementing his text with a rich array of pictures, he shows how Graeco-Roman images inhabit our world as if they were our own. *The Art of the Body* offers a series of comparative and thematic accounts, demonstrating the range of cultural ideas and anxieties that were explored through the figure of the body both in antiquity and in the various cultural landscapes that came afterwards. If we only strip down our aesthetic investment in the corpus of Graeco-Roman imagery, Squire argues, this material can shed light on both ancient and modern thinking. The result is a stimulating process of mutual illumination - and an exhilarating new approach to Classical art history.

The Scent of Ancient Magic

Chapter 1. Breath of the Leopard: scent and magic --Chapter 2. Fragrant panacea: scent and power --Chapter 3. Scent in the Magical Papyri --Chapter 4. Perfumed Enchantments: the smell of witches' magic --Chapter 5. Rot and roses: the smell of witches -- --Chapter 6. Scented space, scenting space --Epilogue. Scent of ancient magic.

Distinction

Examines differences in taste between modern French classes, discusses the relationship between culture and politics, and outlines the strategies of pretension.

Scale, Space, and Canon in Ancient Literary Culture

A history of ancient literary culture told through the quantitative facts of canon, geography, and scale.

Childhood in History

Inquiring into childhood is one of the most appropriate ways to address the perennial and essential question of what it is that makes human beings – each of us – human. In *Childhood in History: Perceptions of Children in the Ancient and Medieval Worlds*, Aasgaard, Horn, and Cojocarú bring together the groundbreaking work of nineteen leading scholars in order to advance interdisciplinary historical research into ideas about children and childhood in the premodern history of European civilization. The volume gathers rich insights from fields as varied as pedagogy and medicine, and

literature and history. Drawing on a range of sources in genres that extend from philosophical, theological, and educational treatises to law, art, and poetry, from hagiography and autobiography to school lessons and sagas, these studies aim to bring together these diverse fields and source materials, and to allow the development of new conversations. This book will have fulfilled its unifying and explicit goal if it provides an impetus to further research in social and intellectual history, and if it prompts both researchers and the interested wider public to ask new questions about the experiences of children, and to listen to their voices.

The Classical Cookbook

Explores the cuisine of the Mediterranean in ancient times from 750 B.C. to A.D. 450.

Ancient Botany

Gavin Hardy and Laurence Totelin have brought together their botanical and historical knowledge to produce this unique overview of ancient botany. It examines all the founding texts of botanical science, such as Theophrastus' Enquiry into Plants, Dioscorides' Materia Medica, Pliny the Elder's Natural History, Nicolaus of Damascus' On Plants, and Galen' On Simple Remedies, but also includes lesser known texts ranging from the sixth century BCE to the seventh century CE, as well as some material evidence. The authors adopt a thematic approach rather than a chronological one, considering important issues such as the definition of a plant, nomenclature, classifications, physiology, the link between plants and their environment, and the numerous usages of plants in the ancient world. The book also takes care to place ancient botany in its historical, social and economic context. The authors have explained all technical botanical terms and ancient history notions, and as a result, this work will appeal to historians of ancient science, medicine and technology; classicists; and botanists interested in the history of their discipline.

Acrocorinth is the acropolis of Corinth. It is the most impressive acropolis on Greek mainland.

The Temple of Apollo is the only structure not demolished by the Romans.

Other important structures are the sacred spring, Peirene, Bema, fountain of Glauke, Odeion and Julian Basilica.

The American School of Classical Studies at Athens is continuing excavations.

The shops were all lined up on the other side of the streets.
