How Students Learn

How Students Learn: Science in the Classroom builds on the discoveries detailed in the best-selling How People Learn. Now these findings are presented in a way that teachers can use immediately, to revitalize their work in the classroom for even greater effectiveness. Organized for utility, the book explores how the principles of learning can be applied in science at three levels: elementary, middle, and high school. Leading educators explain in detail how they developed successful curricula and teaching approaches, presenting strategies that serve as models for curriculum development and classroom instruction. Their recounting of personal teaching experiences lends strength and warmth to this volume. This book discusses how to build straightforward science experiments into true understanding of scientific principles. It also features illustrated suggestions for classroom activities.

My Revision Notes: AQA A-level Philosophy Paper 2 Metaphysics of God and Metaphysics of mind

The Rediscovery of Teaching presents the innovative claim that teaching does not necessarily have to be perceived as an act of control but can be understood and configured as a way of activating possibilities for students to exist as subjects. By framing teaching as an act of dissensus, that is, as an interruption of egological ways of being, this book positions teaching at the progressive end of the educational spectrum, where it can be reconnected with the emancipatory ambitions of education. In conversation with the works of Emmanuel Levinas, Paulo Freire, Jacques Rancière, and other theorists, Gert Biesta shows how students' existence as subjects hinges on the creation of existential possibilities, through which students can assert their "grown-up" place in the world. Written for researchers and students in the areas of philosophy of education, educational theory, curriculum theory, teaching, and teacher education, The Rediscovery of Teaching demonstrates the important role of teachers and teaching in the project of education as emancipation towards grown-up ways of being in the world.

The Rediscovery of Teaching

In the late 1950s plans were initiated to bring a higher level of professionalism to the training of educational professionals. New projects included introducing contemporary scholarship from the humanities and social sciences into colleges of education to revitalize the education knowledge base. In North America and the United Kingdom, analytical philosophers were recruited to inaugurate a 'new philosophy of education.' Analytical philosophy of education soon spread throughout the English speaking world. By the 1980s this analytical impulse had largely subsided. Philosophers trained in analytical philosophy and their students turned to more ambitious normative pursuits related to problems of social justice and democracy. Meanwhile, feminist philosophers opened up new issues regarding the education of women and the nature of teaching and knowing, and a new wave of pragmatist philosophers turned to issues of educational policy. By the 1990s Anglo-American philosophers of education welcomed a dialogue with counterparts in Western Europe, and the field responded to established trends in European philosophy ranging from critical theory and phenomenology to post-structuralism. New leaders emerged in philosophy of education representing all of these various strands. This volume documents the emergence of contemporary philosophy of education as seen by those spearheading these trends.

The contributors to this collection of essays offer a stimulating and varied range of approaches to this developing area. The volume includes discussions on the concept of education and such related topics as indoctrination and the nature and scope of the theory of education. Aspects of education including the field of moral education, and issues which are reflected prominently in the curricula of such subjects as Mathematics and Science in schools and colleges are considered.

The Blackwell Guide to the Philosophy of Education

The topics covered in this volume, originally published in 1973, include the need for a more adequate concept or definition of education, the issue of whether indoctrination is compatible with education, particularly with moral education, and the processes of judging the merits of different approaches to aesthetic education. Two contributors present complementary analyses of the relations between freedom as a characteristic of institutions and the process of learning to be a free man. There is discussion of the neglected subject of rights and duties in education, with special emphasis on the question of a universal right to education. The volume concludes with papers on the relevance of philosophy to the practical judgments of educators and to education as a field of study.

This textbook seeks to explore the purpose and values of the philosophy of education, and specific issues of contemporary relevance.

The Philosophy of Education: An Introduction

Even though the incidents occurred in 1978, TEACHER UNDER A MICROSCOPE examines ongoing issues in education through the eyes and ears of trained observers and evaluators. They observe, comment, and critique everything I say and do. The intake and exit interviews explore my philosophy of education as well as my comments and responses to their questions about what I actually did and why I did it. The conflicts between a disturbed principal (who was backed by the District) and me demonstrate the lack of balance of power in the schools. One of my main contentions is about the necessity of teacher autonomy. You see how I fight for it, not for me, but to better serve and teach my students. There are some basic questions asked and answered through the Observers interviews and protocol and the daily and weekly journals or commentaries I was asked to make. A few times I give you some overlapping of the same incidents as seen by the Observer and then in my journal so you can see them in greater depth. First. What should life in the schools be like for the children and their caretakers teachers and support personnel? Second. What are the basic goals of public education and how should they be accomplished? Third. How much freedom or autonomy should a teacher have or needs to properly achieve these goals? With the accountability movement gaining strength coupled with powerful back-to-basics and safe schools components, it appears the public believes schools should emphasize basic skills. To assure this happening testing is the rage to demonstrate that the students are achieving higher standards of skills and as a way to evaluate the effectiveness of each teacher. Testing is reasonable and necessary as one way to determine what a student has learned and a teacher has taught. It is one way. It does not take the place of all the complex and useful things a teacher has learned about a student during the year. Often, because a student is learning English or is enduring serious emotional distress or has some type of learning handicap, the teacher is in the best position to know whether a test assesses accurately his skill levels, knowledge, or progress. When a single test is the only determiner of whether a child passes or fails, injustices occur. The same is true when the test results of the class are the only determiners of the teachers ability or success. The threat of being fired for the poor performance of a class will discourage even good teachers from taking classes or individual children who have academic or behavior problems. I have already read about and seen instances of teachers trying to insure they have more than their share of good and capable students. This stacking of a class will most affect new teachers (and their students) who have always suffered trial by fire. It makes good sense for the experienced teachers not to jeopardize their career, but is it ethical or good educational practice? The positive aspect of mass testing and accountability is that more students are being exposed to a much wider variety of useful academic skills In many poverty areas the students, because of alleged or believed weak academic abilities, were limited in what was taught to them. Asking teachers to carefully examine what they teach and expecting them to know why as well as what they are teaching is a positive step for the profession... It didnt just happen. Through years of trial and plenty of errors, I gradually found my teaching style. Through eclectic reading I brought into my classroom ideas and concepts from many disciplines. I found I was not an original thinker, but I was very good at taking the ideas of more gifted people and applying them in classroom situations. I took many concepts and techniques used for adults in the Human Potential M

For healthcare professionals, clinical education is foundational to the learning process. However, balancing safe patient care with supportive learning opportunities for students can be challenging for instructors and the complex social context of clinical learning environments makes intentional teaching approaches essential. Clinical instructors require advanced teaching knowledge and skills as learners are often carrying out interventions on real people in unpredictable environments. Creative Clinical Teaching in the Health Professions is an indispensable guide for educators in the health professions. Interspersed with creative strategies and notes from the field by clinical teachers who offer practical suggestions, this volume equips healthcare educators with sound pedagogical theory. The authors focus on the importance of personal philosophies, resilience, and professional socialization while evaluating the current practices in clinical learning environments from technology to assessment and evaluation. This book provides instructors with the tools to influence both student success and the quality of care provided by future practitioners.

Education's Epistemology extends and further defends Harvey Siegel's "reasons conception" of critical thinking. It analyzes and emphasizes both the epistemic quality, and the dispositions and character traits that constitute the "critical spirit," that are central to a proper account of critical thinking; argues that that epistemic quality must be understood ultimately in terms of epistemic rationality; defends a conception of rationality that involves both rules and judgment; and argues that critical thinking has normative value over and above its instrumental tie to truth. Siegel also argues, contrary to currently popular multiculturalist thought, for both transcultural and universal philosophical ideals, including those of multiculturalism and critical thinking themselves.

Teacher Under a Microscope

Written specifically for teachers, Motivating Students to Learn offers a wealth of research-based principles on the subject of student motivation for use by classroom teachers. Now in its fourth edition, this book discusses specific classroom strategies by tying these principles to the realities of contemporary schools, curriculum goals, and classroom dynamics. The authors lay out effective extrinsic and intrinsic strategies to guide teachers in their day-to-day practice, provide guidelines for adapting to group and individual differences, and discuss ways to reach students who have become discouraged or disaffected learners. This edition features new material on the roles that classroom goal setting, developing students' interest, and teacher-student and peer relationships play in student motivation. It has been reorganized to address six key questions that combine to explain why students may or may not be motivated to learn. By focusing more closely on the teacher as the motivator, this text presents a wide range of motivational methods to help students see value in the curriculum and lessons taught in the classroom.

Knowledge and the Curriculum

This book provides critical and reflective discussions of a wide range of issues arising in education at the interface between philosophy, research, policy and practice. It addresses epistemological questions about the intellectual resources that underpin educational research, explores the relationship between philosophy and educational research, and examines debates about truth and truthfulness in educational research. Furthermore, it looks at issues to do with the relationship between research, practice and policy, and discusses questions about ethics and educational research. Finally, the book delves into the deeply contested area of research quality assessment. The book is based on extensive engagement in empirically based educational research projects and in the institutional and professional management of research, as well as in philosophical work. It clarifies what is at stake in international debates around educational research and teases out the nature of the arguments, and, where argument permits, the conclusions to which these point. The book discusses these familiar themes using less predictable sources and points of reference, such as: codes of social obligation in contemporary Egypt and New Zealand: the 'Soviet', and the inspiration of the nineteenth-century philosopher, Abai in contemporary Kazakhstan; seventeenth-century France, Pascal, and the disputes between Jesuits and Jansenites; eighteenth-century Italy, Giambattista Vico, and la scienzia nuova; 'educational magic' in traditional Ethiopia; and ends at a banquet with Socrates and dinner with wine and a conversation-loving Montaigne.

Creative Clinical Teaching in the Health Professions

This volume documents the 17th Münster Lectures in Philosophy with Susan Haack, the prominent contemporary philosopher. It contains an original, programmatic article by Haack on her overall philosophical approach, entitled 'The Fragmentation of Philosophy, the Road to Reintegration'. In addition, the volume includes seven papers on various aspects of Haack's philosophical work as well as her replies to the papers. Susan Haack has deeply influenced many of the debates in contemporary philosophy. In her vivid and accessible way, she has made ground-breaking contributions covering a wide range of topics, from logic, metaphysics and epistemology, to pragmatism and the philosophy of science and law. In her work, Haack has always been very sensitive in detecting subtle differences. The distinctions she has introduced reveal what lies at the core of philosophical controversies, and show the problems that exist with established views. In order to resolve these problems, Haack has developed some 'middle-course approaches'. One example of this is her famous 'Foundherentism', a theory of justification that includes elements from both the rival theories of Foundationalism and Coherentism. Haack herself has offered the best description of her work calling herself a 'passionate moderate'.

Motivating Students to Learn

This book explores education in the 21st century in post-modern Western societies through a philosophical lens. Taking a broad perspective of education and its attendant terminology, assumptions, myths and influences; the author examines why we teach as opposed to how. In doing so, he includes not only teachers, but all adults who are involved in bringing up children. Applying philosophical theories throughout history to present day practice, this volume is sure to be a useful resource not only for teachers who are just starting out, but those with an interest in education in the past, present and future. This wide-ranging book will be valuable for educators, parents and educational policy makers, and all those who believe it takes a village to raise a child.

Susan Haack: Reintegrating Philosophy

This book develops an argument for a historicist and non-foundationalist notion of rationality based on an interpretation of Wittgenstein of the Philosophical Investigations and On Certainty. The book examines two notions of rationality—a universal versus a constitutive conception — and their significance for educational theory. The former advanced by analytic philosophy of education as a form of conceptual analysis is based on a mistaken reading of Wittgenstein. Analytic philosophy of education used a reading of Wittgenstein's philosophy of language to set up and justify an absolute, universal and ahistorical notion of rationality. By contrast, the book examines the underlying influence of the later Wittgenstein on the historicist turn in philosophy of science as a basis for a non-foundationalist and constitutive notion of rationality which is both historical and cultural, and remains consistent with wider developments in philosophy, hermeneutics and social theory. This book aims to understand the philosophical motivation behind this view, to examine its intellectual underpinnings and to substitute this universal conception of rationality by reference to a Hegelian interpretation of the later Wittgenstein that emphasizes his status as an anti-foundational thinker.

Poems, Protest, and a Dream

Three issues feature as the central themes throughout this book: the nature of social science in general; the nature of educational enquiry in particular; and the links between the language and concepts of research, on the one hand, and those of practice and policy on the other. In analyzing and interrelating these themes, Richard Pring shows their relationship to such central philosophical concepts as meaning, truth, and objectivity. This lucid and ambitious study will be seen as a classic of educational literature. Reviews of the first edition include: "A stimulating and readable book...Pring gives a succinct account of the different philosophical positions and makes a balanced evaluation of their strong and weak points...should be compulsory reading for all trainee teachers let alone educational researchers." -Dr Paul Martinez, Learning and Skills Development Agency Reviews Editor "This volume is a textbook and a manifesto, and research students will welcome the clarity with which the various concepts, tools and approaches are outlined. Most teachers will be stimulated by it." - Times Educational Supplement "Professor Pring's work is far more than the title modestly claims it to be. As much a primer in philosophy of education as a specialist work on the philosophy of educational research it is lucid and concise on topics ranging from the aim[s] of education to the nature of knowledge." - Education Review>

Educational Philosophy for 21st Century Teachers

This second edition to Hidden Dangers to Kid's Learning: Parent Guide to Cope with Educational Roadblocks gives more insight into ways parents can understand and help their academically struggling child. Parents and their children can be empowered to recognize the perils and the pitfalls of our current educational crisis and take responsibility and control of their education before it is too late. We have new reasons to believe in our children and new possibilities to expect and help our children to be able to cope in our global community.

A Teacher's Guide to Philosophy for Children

A collection of original philosophical essays that together make a robust case for the teaching of philosophy in schools. >

With all that we know about how students learn, the nature of the world they will face after graduation, and the educational inequities that have existed for centuries, maintaining a traditional, one-size-fits-all approach to teaching and learning is tantamount to instructional malpractice. International security, the success of global economies, and sustainability as a global society all depend on the success of our education system in the years to come. It's our obligation to prepare our students for their future—not our past. Authors Eric C. Sheninger and Thomas C. Murray outline eight keys—each a piece of a puzzle for transforming the K–12 education system of teaching and learning—to intentionally design tomorrow's schools so today's learners are prepared for success . . . and stand ready to create new industries, find new cures, and solve world problems. The traditional model of schooling ultimately prepares students for the industrial model of the past. If we want our students to become successful citizens in a global society, we must dramatically shift to a more personal approach. Failure is not an option. We can no longer wait. Let Learning Transformed show you how you can be a part of the solution. The authors encourage you to use the hashtag #LT8Keys to continue the discussion online.

Designed to bring you up to speed quickly, the book is grounded in the principles of constructivist learning theory and continuous improvement. It helps you to connect with what you already know about assessment, integrate that knowledge with new information, and try new approaches to enhance your students' learning. You see clearly what it means to shift from a teacher-centered paradigm of instruction to a learner-centered paradigm."--BOOK JACKET.

Philosophy of Educational Research

The concept of potential plays a prominent role in the thinking of parents, educators and planners the world over. Although this concept accurately reflects central features of human nature, its current use perpetuates traditional myths of fixity, harmony and value, calculated to cause untold mischief in social and educational practice. First published in 1985, Israel Scheffler's book aims to demythologise the concept of potential. He shows its roots in genuine aspects of human nature, but at the same time frees it from outworn philosophical myths by means of analytical reconstruction - thereby improving both its theoretical and its practical applicability. The book concludes with an interpretation of policy-making in education, and reflections on the ideal education of a policy-maker. It emphasises human symbolism, choice, temporal continuity, and self-determination as indispensible elements of any adequate philosophy of education. Of Human Potential will be of interest to a broad range of philosophers, educators and social scientists.

Foundations of American Education

This volume examines some of the arguments that have been put forward over the years to explain the way in which understanding is acquired. The author looks firstly at the empricist thesis of genesis without structure, and secondly at the opposing theory, represented by Chomsky of structure without genesis. His greatest sympathy is with the theory of Piaget, who represents structure with genesis. He considers that Piaget's account is flawed, however, by its biological model and by its failure to deal adequately with the problem of objectivity. The second part of the book contains chapters on language, the differences between early and later learning, and on teaching. The book provides a general understanding of the principles that make it possible, and the differences between the ways in which they work at different stages.
