Craig & Fred Young Readers' Edition

A heartwarming story of a stray dog and a U.S. Marine who met under the unlikely circumstances in Afghanistan—and who changed each other's lives forever. As part of an elite team of Marines, Craig Grossi was sent on his most dangerous assignment to the Sangin District of Afghanistan. He expected to face harsh conditions and violence from Taliban fighters. What he didn't expect was to meet a stray dog, with a big goofy head and little legs—a dog all on his own, filthy and covered in bugs, in a bomb-ridden district, but who carried himself with confidence. And even though the Marines have a rule against approaching strays, Craig couldn't help but offer some food and a pat—and was shocked when the dog wagged his tail. From that moment on, they were inseparable; whether out on missions or back at the base, the dog named Fred went along. When the time came for Craig to leave Afghanistan, he knew that Fred had to leave with him no matter what. And as Craig tried to get acclimated to civilian life, Fred was there for him. This book tells the inspiring story of two friends who ultimately rescued each other, and the stubborn positivity and love that continue to shape their world.

Craig & Fred

The uplifting and unforgettable true story of a US Marine, the stray dog he met on an Afghan battlefield, and how they saved each other and now travel America together, "spreading the message of stubborn positivity." In 2010, Sergeant Craig Grossi was doing intelligence work for Marine RECON—the most elite fighters in the Corps—in a remote part of Afghanistan. While on patrol, he spotted a young dog "with a big goofy head and little legs" who didn't seem vicious or run in a pack like most strays they'd encountered. After eating a piece of beef jerky Craig offered—against military regulations—the dog began to follow him. "Looks like you made a friend," another Marine yelled. Grossi heard, "Looks like a 'Fred.'" The name stuck, and a beautiful, life-changing friendship was forged. Fred not only stole Craig's heart; he won over the RECON fighters, who helped Craig smuggle the dog into heavily fortified Camp Leatherneck in a duffel bag—risking jail and Fred's life. With the help of a crew of DHL workers, a sympathetic vet, and a military dog handler, Fred eventually made it to Craig's family in Virginia. Months later, when Craig returned to the U.S., it was Fred's turn to save the wounded Marine from Post-Traumatic Stress. Today, Craig and Fred are touching lives nationwide, from a swampy

campground in a Louisiana State Park to the streets of Portland, Oregon, and everywhere in between. A poignant and inspiring tale of hope, resilience, and optimism, with a timeless message at its heart—"it is not what happens to us that matters, but how we respond to it"—Craig & Fred is a shining example of the power of love to transform our hearts and our lives.

Second Chances

The author of the heartwarming *Craig and Fred* tells the deeply emotional and inspiring story of the next phase of their lives together: working closely with prison inmates in Maine who raise and train puppies to become service dogs. Former US Marine Craig Grossi and his dog Fred appeared on the 'Today Show' and 'Rachael Ray', and in schools, bookstores, and military bases across America as they told the uplifting story of how Craig found Fred, a stray, while serving in Afghanistan--and brought him home. During their travels, Craig was invited to speak at Maine State Prison—the penitentiary that inspired Stephen King's famous "Shawshank." While there, he met a group of very special inmates, participants in a program run by the non-profit America's Vet Dogs. Craig discovered that many of the prisoners are veterans—former soldiers serving their country in an entirely different way: by transforming purebred Labrador Retrievers from floppy puppies into indispensable companions for disabled vets. These service dogs literally and figuratively open doors for men and women, offering hope and a renewed sense of freedom. Yet these disabled vets are not the only lives changed by these dogs. The inmates who train them "are given a purpose, they're given experience, and most importantly they're given a sense of self-worth," Craig explains. "The men at Maine State are given a second chance—something that I believe everyone deserves." For Craig, the visit had a profound impact. "There was something special going on inside its walls and it was calling out to me. I quickly realized that the program and its men had something to show the world." In this emotionally powerful book, he introduces these men and challenges us to look deeper, to see them as human beings deserving of a new shot at life. "We're quick to give second chances to celebrities, politicians and famous athletes when they screw up," Craig reminds us, "but when it comes to those who've been convicted for their mistakes, we too often dismiss them as forever lost." *Second Chances* poignantly shows that no life is irredeemable and that each of us can make a difference if given the opportunity.

Marines and Helicopters, 1946-1962

During the early stages of helicopter development, when helicopters were able to lift just slightly more than their own weight, the military services were eagerly seeking to obtain a variety of larger, more useful helicopters. The youthful helicopter industry expressed optimism, although at times unrealistic, in its ability to meet the military requirements. The development of the helicopter program within the Marine Corps was sparked by the foresight and imagination of the officers of the period. While early helicopters provided stepping stones for an orderly progression of the program, the slowness of the technical advances and the periods of financial austerity after World War II and Korea prevented the Marine Corps from developing the vertical envelopment concept as rapidly as desired. The program gained interest and momentum, however, as a result of the success of helicopters in Korea. As Lieutenant General Gerald C. Thomas stated: "Indeed, the helicopter gave clear evidence, from its first tactical employment, that a major advance in combat was at hand." This history, which traces the development of helicopters in the Marine Corps from 1946 to 1962, offers a tribute to the creative vision and planning of a handful of Marine officers who conceived of the vertical assault concept in amphibious operations at a time when suitable aircraft to make it work did not exist. The story of the subsequent struggle to procure and develop those aircraft, to refine a doctrine for their employment, and to familiarize the Marine Corps with their use is an interesting and vital part of modern Marine Corps history. The documentary basis for this monograph was primarily the official records of the Marine Corps and Navy Department, but considerable use was made of interviews and correspondence with key individuals involved in all phases of helicopter development.

Quantico

In 1950, when he commissioned the first edition of *The Armed Forces Officer*, Secretary of Defense George C. Marshall told its author, S.L.A. Marshall, that "American military officers, of whatever service, should share common ground ethically and morally." In this new edition, the authors methodically explore that common ground, reflecting on the basics of the Profession of Arms, and the officer's special place and distinctive obligations within that profession and especially to the Constitution.

Pets and Human Development

The anthology of articles that follows was compiled by the History and Museums Division during the 50th Anniversary commemoration of the Korean Conflict, 1950-1953. The focus of the various authors who wrote these historically related works on Korea did so to remember those Marines who fought and died in what some historians sometimes characterized as the "forgotten war." Forgotten or not, the Korean conflict was without parallel in Marine Corps history and no one who experienced it or lived through this era could ever forget the difficulties that they would encounter there. The Korean War also represented a milestone in the developmental history of the Marine Corps. For perhaps what could very well be the last time, the Marine Corps made an opposed World War II style amphibious landing against a dedicated enemy. Korea was also the opening salvo in what became known as the Cold War. In reality, Korea represented the beginning of a series of "limited wars" that would be fought by the United States with the express political purpose of keeping such conflicts from developing into full blown world wars. Frustratingly for the men and women in uniform during the Cold War, political considerations frequently overrode military exigencies and logic. Having just successfully concluded a total war against an enemy whose objectives were clearly identifiable, the Korean conflict proved fraught with political twists and turns that made the military's job immensely more difficult. This was especially evident during the "stalemate" phase of the war, 1952-1953. No less bloody or violent, this period of the conflict saw the Marine Corps incur a significant number of casualties. The Korean conflict was also important for operational reasons. It was clear that from 1950 on, limited wars fought by U.S. forces would be largely "come as you are affairs." During the summer and early fall of 1950, the Marine Corps learned a valuable lesson when it had to scramble to assemble its landing force for the Inchon operation, getting the 1st Marine Division into theater in the nick of time. No longer would the United States have the luxury of time in getting forces ready for limited wars. Next, for the first time, the advent of the helicopter would play a significant role in the combat plans of Marine units in the field. Experimentation with the concept of vertical assault, using this new technology took place during the conflict. Korea would also be the first time Marines would be given personal body armor or "flak jackets" to wear in combat. Such body armor would come in handy as the war settled into a stalemate along the 38th Parallel. While Marine elements had deployed to extremely cold locations in the past such as the occupation of Iceland by the 1st Marine Brigade (Provisional) in 1941, Korea would be the first time in the modern era where the Marine Corps would have to fight in extremely cold conditions. During Korea, the Corps came away with a new appreciation for the necessity of having the proper environmental gear tested and available for use by its combat and combat support troops. In sum, Korea set the operational tone that the Marine Corps would follow for the rest of the Cold War.

Stubby also wins over the commanding officer and is soon made an official member of the 102nd Infantry of the 26th division. What follows is an epic tale of how man's best friend becomes an invaluable soldier on the front lines and in the trenches, a decorated war hero and an inspiration to a country long after the troops returned home.

No Place Like Home

Sergeant Stubby

This is the first of a series of chronological histories prepared by the Marine Corps History and Museums Division to cover the entire span of Marine Corps involvement in the Vietnam conflict. This particular volume covers a relatively obscure chapter in U.S. Marine Corps history—the activities of Marines in Vietnam between 1954 and 1964. The narrative traces the evolution of those activities from a one-man advisory operation at the conclusion of the French-Indochina War in 1954 to the advisory and combat support activities of some 700 Marines at the end of 1964. As the introductory volume for the series this account has an important secondary objective: to establish a geographical, political, and military foundation upon which the subsequent histories can be developed.

Daniel's Story

When Richard Rumelt's *Good Strategy/Bad Strategy* was published in 2011, it immediately struck a chord, calling out as bad strategy the mish-mash of pop culture, motivational slogans and business buzz speak so often and misleadingly masquerading as the real thing. Since then, his original and pragmatic ideas have won fans around the world and continue to help readers to recognise and avoid the elements of bad strategy and adopt good, action-oriented strategies that honestly acknowledge the challenges being faced and offer straightforward approaches to overcoming them. Strategy should not be equated with ambition, leadership, vision or planning; rather, it is coherent action backed by an argument. For Rumelt, the heart of good strategy is insight into the hidden power in any situation, and into an appropriate response - whether launching a new product, fighting a war or putting a man on the moon. Drawing on examples of the good and the bad from across all sectors and all ages, he shows how this insight can be cultivated with a wide variety of tools that lead to better thinking and better strategy, strategy that cuts through the hype and gets results.

A Life Decoded

How should we treat non-human animals? In this immensely powerful and influential book (now with a new introduction by Sapiens author Yuval Noah Harari), the renowned moral philosopher Peter Singer addresses this simple question with trenchant, dispassionate reasoning. Accompanied by the disturbing evidence of factory farms and laboratories, his answers triggered the birth of the animal rights movement. 'An extraordinary book which has had extraordinary effects... Widely known as the bible of the animal liberation movement' Independent on Sunday In the decades since this landmark classic first appeared, some public attitudes to animals may have changed but our continued abuse of animals in factory farms and as tools for research shows that the underlying ideas Singer exposes as ethically indefensible are still dominating the way we treat animals. As Yuval Harari's brilliantly argued introduction makes clear, this book is as relevant now as the day it was written.

Saving Sadie

This is a study of the Second Battle of Fallujah, also known as Operation Al-Fajr and Operation Phantom Fury. Over the course of November and December 2004, the I Marine Expeditionary Force conducted a grueling campaign to clear the city of Fallujah of insurgents and end its use as a base for the anticoalition insurgency in western Iraq. The battle involved units from the Marine Corps, Army, and Iraqi military and constituted one of the largest engagements of the Iraq War. The study is based on interviews conducted by Marine Corps History Division field historians of battle participants and archival material. The book will be of primary interest to Marines, other service members, policy makers, and the faculty and students at the service schools and academies. Historians, veterans, high school through university history departments and students as well as libraries may be interested in this book as well. With full color maps and photographs.

Doctor Dogs

Animal Liberation

Dedicated to the Sailors and Marines who lost their lives on the final voyage of USS Indianapolis and to those who survived the torment at sea following its sinking. plus the crews that risked their lives in rescue ships. The USS Indianapolis (CA-35) was a decorated World War II warship that is primarily remembered for her worst 15 minutes. . This ship earned ten (10) battle stars for her service in World War II and was credited for shooting down nine (9) enemy planes. However, this fame was overshadowed by the first 15 minutes July 30, 1945, when she was struck by two (2) torpedoes from Japanese submarine I-58 and sent to the bottom of the Philippine Sea. The sinking of Indianapolis and the loss of 880 crew out of 1,196 --most deaths occurring in the 4-5 day wait for a rescue delayed --is a tragedy in U.S. naval history. This historical reference showcases primary source documents to tell the story of Indianapolis, the history of this tragedy from the U.S. Navy perspective. It recounts the sinking, rescue efforts, follow-up investigations, aftermath and continuing communications efforts. Included are deck logs to better understand the ship location when she sunk and testimony of survivors and participants. For additional historical publications produced by the U.S. Naval History and Heritage Command, please check out these resources here: <https://bookstore.gpo.gov/agency/naval-history-heritage-command> Year 2016 marked the 71st anniversary of the sinking and another spike in public attention on the loss -- including a big screen adaptation of the story, talk of future films, documentaries, and planned expeditions to locate the wreckage of the warship.

U.S. Marines in Battle

A NEW YORK TIMES BESTSELLER A New York Times Notable Book "Riveting, heartbreaking, sometimes difficult, always inspiring." —The New York Times Book Review "An incredibly moving memoir about what it means to be a doctor." —Ellen Pompeo As seen/heard on Fresh Air, The Daily Show with Trevor Noah, NBC Nightly News, MSNBC, Weekend Edition, and more An emergency room physician explores how a life of service to others taught her how to heal herself. Michele Harper is a female, African American emergency room physician in a profession that is overwhelmingly male and white. Brought up in Washington, D.C., in a complicated family, she went to Harvard, where she met her husband. They stayed together through medical school until two months before she was scheduled to join the staff of a hospital in central Philadelphia, when he told her he couldn't move with her. Her marriage at an end, Harper began her new life in a new city, in a new job, as a newly single woman. In the ensuing years, as Harper learned to become an effective ER physician, bringing insight and empathy to every patient encounter, she came to understand that each of us is broken—physically, emotionally, psychically. How we recognize those breaks, how we try to mend them, and where we go from there are all crucial parts of the healing process. *The Beauty in Breaking* is the poignant true story of Harper's journey toward self-healing. Each of the patients Harper writes about taught her something important about recuperation and recovery. How to let go of fear even when the future is murky: How to tell the truth when it's simpler to overlook it. How to understand that compassion isn't the same as justice. As she shines a light on the systemic disenfranchisement of the patients she treats as they struggle to maintain their health and dignity, Harper comes to understand the importance of allowing ourselves to make peace with the past as we draw support from the present. In this hopeful, moving, and beautiful book, she passes along the precious, necessary lessons that she has learned as a daughter, a woman, and a physician.

The Brain That Changes Itself

This review of *Research and Archaeology* augments the regional research framework, which appeared in two parts as a Resource Assessment (Glazebrook ed. 1997); and a Research Agenda and Strategy (Brown and Glazebrook eds 2000). The review considers new evidence on a period-by-period basis, with each period subdivided into an assessment of key projects undertaken since 2000, an assessment of progress on research topics proposed in 2000 and a consideration of future research topics. The regional research framework was never intended to be a fixed point but rather a dynamic process through which the region's archaeology can be influenced, and subject to periodic review and revision. All three parts of the framework are available online (at www.eaareports.org.uk) and will be kept live and updated by the historic environment community of the East of England as new discoveries are made and new research priorities established.
