### Essential Corporate Law

This book examines how businesses manage their labour systems, and particularly how they manage the complex interaction of factors which give rise to instances of 'partnership' style relations between businesses and their employees. The book draws from the literature concerning 'Varieties of Capitalism' (VoC) and the different institutional and regulatory designs inherent in different types of political economy. The book is informed by a new and extensive set of empirical data from Australia that examines the activities of national and multinational business corporations, their outlooks and relationships with stakeholders, and relates these to new and evolving theoretical frameworks based in political economy and law. The book places the Australian regulatory model within this international debate, and assesses the extent to which the system does or does not fit into the general categorisation created in the VoC literature.

Written in plain English and Chinese, this text offers clear and concise explanations of key legal concepts, significant cases and principal judgments to form a systematic framework of self-directed learning. The last chapter focuses specifically on teaching Chinese students how to apply the IRAC model to solve legal problems. Suitable for those studying business and corporate law as part of a non-law degree such as accounting, marketing and business management studies, this text is also a valuable addition to international professionals seeking an understanding of the Australian business and corporate legal environment.

### Ford's Principles of Corporations Law

The history of incorporations legislation and its administration is intimately tied to changes in social beliefs in respect to the role and purpose of the corporation. By studying the evolution of the corporate form in Britain and a number of its colonial possessions, the book illuminates debates on key concepts including the meanings of laissez faire, freedom of commerce, the notion of corporate responsibility and the role of the state in the regulation of business. In doing so, A Social History of Company Law advances our understanding of the shape, effectiveness and deficiencies of modern regulatory regimes, and will be of much interest to a wide circle of scholars.

### Australian Corporation Law

This book provides a clear overview of the legal rules relating to directors' disqualification in Australia, Germany, South Africa, the UK and the US, and to highlight the differences in the disqualification regimes of these jurisdictions. The book seeks to determine whether disqualification on application should be developed further as a corporate law and corporate governance tool to ensure that individuals who have a proven record of posing a particular risk to the business community, shareholders and creditors, are indeed disqualified from being directors. The book is unique as it provides a single source where the disqualification regimes of all these jurisdictions are explored and compared. The book will appeal to scholars of corporate law, regulators and policy-makers. The book will also be of particular interest to senior managers and directors to determine precisely what the laws regarding disqualification of company directors are, and what type of behaviour might expose them to potential disqualification.

### Australian Corporate Law, 5th Edition

Corporate laws are based on the idea that the interests of shareholders should be the primary concern of company directors. However, some argue that the proper role for shareholders is to sit back and let the corporation's managers do their job, or that the pursuit of shareholders' interests detracts from the concerns of employees or victims of corporate wrongdoing or other stakeholders. Stephen Bottomley argues that instead of consigning shareholders to this passive role, they should be given opportunities to be active members of corporations. Corporations are constitutional arrangements rather than mere contractual agreements. They are decision-making organizations in which questions of process and structure are important. Thus, instead of using economic criteria such as efficiency as the sole measure for deciding what constitutes 'good' corporate governance, this book examines whether ideas of accountability, deliberation and contestability provide a valuable framework for assessing corporate structures and process and for encouraging greater shareholder participation.
