You are fortunate to find it with us today.

We offer the entire version Redefining Winning Strategy at no cost.

### Vested

Working with partners is the future of business. In this timely and original work, Vitasek and Mandrodt show companies, through a series of high-profile global examples, how to create a vested agreement that brings success and create a better future for everyone involved.

### Vested

Outlines a breakthrough business model being used by three high-profile and successful market leaders, explaining how their vested relationships with partners and suppliers have reversed losses, promoted innovative environments and enabled higher profits.

### Business @ the Speed of Thought

In his new book, Microsoft chairman and CEO Bill Gates discusses how technology can help run businesses better today and how it will transform the nature of business in the near future. Gates stresses the need for managers to view technology not as overhead but as a strategic asset, and offers detailed examples from Microsoft, GM, Dell, and many other successful companies. Companion Web site.

### Brand Royalty

More than simply a comprehensive collection of brand success stories, this text will also help businesses and students to easily identify the factors behind these successes, and to place them into a broader business and social context.

## Capitalism and Desire

Despite creating vast inequalities and propping up reactionary world regimes, capitalism has many passionate defenders—but not because of what it withholds from some and gives to others. Capitalism dominates, Todd McGowan argues, because it mimics the structure of our desire while hiding the trauma that the system inflicts upon it. People from all backgrounds enjoy what capitalism provides, but at the same time are told more and better is yet to come. Capitalism traps us through an incomplete satisfaction that compels us after the new, the better, and the more. Capitalism's parasitic relationship to our desires gives it the illusion of corresponding to our natural impulses, which is how capitalism's defenders characterize it. By understanding this psychic strategy, McGowan hopes to divest us of our addiction to capitalist enrichment and help us rediscover enjoyment as we actually experienced it. By locating it in the present, McGowan frees us from our attachment to a better future and the belief that capitalism is an essential outgrowth of human nature. From this perspective, our economic, social, and political worlds open up to real political change. Eloquent and enlivened by examples from film, television, consumer culture, and everyday life, *Capitalism and Desire* brings a new, psychoanalytically grounded approach to political and social theory.

## Idea Man

What's it like to start a revolution? How do you build the biggest tech company in the world? And why do you walk away from it all? Paul Allen co-founded Microsoft. Together he and Bill Gates turned an idea writing software into a company and then an entire industry. This is the story of how it came about: two young mavericks who turned technology on its head; the bitter battles as each tried to stamp his vision on the future; and, the ruthless brilliance and fierce commitment. And finally, Allen's extraordinary step in walking away from it all to discover what it is you do after you've already changed the world.

## The End of Poverty

Hailed by *The New York Times* as probably the most important economist in the world, Jeffrey Sachs is internationally renowned for his work around the globe advising economies in crisis. Now he draws on all he has learned from twenty-five years of work to offer a uniquely informed vision of the keys to economic success in the world today and the steps that are necessary to achieve prosperity for all. Marrying vivid, passionate storytelling with profound, rigorous analysis, Jeffrey Sachs explains why, over the past two hundred years, wealth has diverged across the planet and why the poorest nations have so far been unable to improve their lot. He explains how to arrive at an in-depth diagnosis of a country's economic challenges and the options it faces. He leads readers along the same learning path he himself followed, telling the stories of his own work in Bolivia, Poland, Russia, India, China and Africa to bring us to a deep understanding of the challenges faced by developing nations in different parts of the world. Finally, he offers an integrated set of solutions to the interwoven economic, political, environmental and social problems that most challenge the world's poorest countries and, indeed, the world. Ultimately, *The End of Poverty* leaves readers with an understanding, not just of how grave the problem of poverty is, but how solvable it is and why making the necessary effort is a matter of both moral obligation and strategic self-interest of the rich countries. A work of astounding intellectual vision that grows out of unprecedented real-world experience, *The End of Poverty* is a road map to a safer, more prosperous world for us all.

## The Social Media Reader

The first collection to address the collective transformation happening in response to the rise of social media. With the rise of web 2.0 and social media platforms taking over vast tracts of territory on the internet, the media landscape has shifted drastically in the past 20 years, transforming previously stable relationships between media creators and consumers. *The Social Media Reader* is the first collection to address the collective transformation with pieces on social media, peer production, copyright politics, and other aspects of contemporary internet culture from all the major thinkers in the field. Culling a broad range and incorporating different styles of scholarship from foundational pieces and published articles to unpublished pieces, journalistic accounts, personal narratives from blogs, and whitepapers, *The Social Media Reader* promises to be an essential text, with contributions from Lawrence Lessig, Henry Jenkins, Clay Shirky, Tim O'Reilly, Chris Anderson, Yochai Benkler, danah boyd, and Fred von Loehmann, to name a few. It covers a wide-ranging topical terrain, much like the internet itself, with particular emphasis on collaboration and sharing, the politics of social media and social networking, Free Culture and copyright politics, and labor and ownership. Theorizing new models of collaboration,

identity, commerce, copyright, ownership, and labor, these essays outline possibilities for cultural democracy that arise when the formerly passive audience becomes active cultural creators, while warning of the dystopian potential of new forms of surveillance and control.

## Understanding Media

When first published, Marshall McLuhan's *Understanding Media* made history with its radical view of the effects of electronic communications upon man and life in the twentieth century.

## In the Bubble

How to design a world in which we rely less on stuff, and more on people. We're filling up the world with technology and devices, but we've lost sight of an important question: What is this stuff for? What value does it add to our lives? So asks author John Thackara in his new book, *In the Bubble: Designing for a Complex World*. These are tough questions for the pushers of technology to answer. Our economic system is centered on technology, so it would be no small matter if "tech" ceased to be an end-in-itself in our daily lives. Technology is not going to go away, but the time to discuss the end it will serve is before we deploy it, not after. We need to ask what purpose will be served by the broadband communications, smart materials, wearable computing, and connected appliances that we're unleashing upon the world. We need to ask what impact all this stuff will have on our daily lives. Who will look after it, and how? *In the Bubble* is about a world based less on stuff and more on people. Thackara describes a transformation that is taking place now—not in a remote science fiction future; it's not about, as he puts it, "the schlock of the new" but about radical innovation already emerging in daily life. We are regaining respect for what people can do that technology can't. *In the Bubble* describes services designed to help people carry out daily activities in new ways. Many of these services involve technology—ranging from body implants to wide-bodied jets. But objects and systems play a supporting role in a people-centered world. The design focus is on services, not things. And new principles—above all, lightness—inform the way these services are designed and used. At the heart of *In the Bubble* is a belief, informed by a wealth of real-world examples, that ethics and responsibility can inform design decisions without impeding social and technical innovation.

## The Potato Crop

This book is open access under a CC BY 4.0 license. This book provides a fresh, updated and science-based perspective on the current status and prospects of the diverse array of topics related to the potato, and was written by distinguished scientists with hands-on global experience in research aspects related to potato. The potato is the third most important global food crop in terms of consumption. Being the only vegetatively propagated species among the world's main five staple crops creates both issues and opportunities for the potato: on the one hand, this constrains the speed of its geographic expansion and its options for international commercialization and distribution when compared with commodity crops such as maize, wheat or rice. On the other, it provides an effective insulation against speculation and unforeseen spikes in commodity prices, since the potato does not represent a good traded on global markets. These two factors highlight the underappreciated and underrated role of the potato as a dependable nutrition security crop, one that can mitigate turmoil in world food supply and demand and political instability in some developing countries. Increasingly, the global role of the potato has expanded from a profitable crop in developing countries to a crop providing income and nutrition security in developing ones. This book will appeal to academics and students of crop sciences, but also policy makers and other stakeholders involved in the potato and its contribution to humankind's food security.

## Where Wizards Stay Up Late

Twenty five years ago, it didn't exist. Today, twenty million people worldwide are surfing the Net. *Where Wizards Stay Up Late* is the exciting story of the pioneers responsible for creating the most talked about, most influential, and most far-reaching communications breakthrough since the invention of the telephone. In the 1960's, when computers were regarded as mere giant calculators, J.C.R. Licklider at MIT saw them as the ultimate communications devices. With Defense Department funds, he and a band of visionary computer whizzes began work on a nationwide, interlocking network of computers. Taking readers behind the scenes, *Where Wizards Stay Up Late* captures the hard work, genius, and happy accidents of their daring, stunningly successful venture.

## The Digital Transformation of Logistics

The digital transformation is in full swing and fundamentally changes how we live, work, and communicate with each other. From retail to finance, many industries see an inflow of new technologies, disruption through innovative platform business models, and employees struggling to cope with the significant shifts occurring. This Fourth Industrial Revolution is predicted to also transform Logistics and Supply Chain Management, with delivery systems becoming automated, smart networks created everywhere, and data being collected and analyzed universally. The Digital Transformation of Logistics: Demystifying Impacts of the Fourth Industrial Revolution provides a holistic overview of this vital subject clouded by buzz, hype, and misinformation. The book is divided into three themed-sections: Technologies such as self-driving cars or virtual reality are not only electrifying science fiction lovers anymore, but are also increasingly presented as cure-all remedies to supply chain challenges. In The Digital Transformation of Logistics: Demystifying Impacts of the Fourth Industrial Revolution, the authors peel back the layers of excitement that have grown around new technologies such as the Internet of Things (IoT), 3D printing, Robotic Process Automation (RPA), Blockchain or Cloud computing, and show use cases that give a glimpse about the fascinating future we can expect. Platforms that allow businesses to centrally acquire and manage their logistics services disrupt an industry that has been relationship-based for centuries. The authors discuss smart contracts, which are one of the most exciting applications of Blockchain, Software as a Service (SaaS) offerings for freight procurement, where numerous data sources can be integrated and decision-making processes automated, and marine terminal operating systems as an integral node for shipments. In The Digital Transformation of Logistics: Demystifying Impacts of the Fourth Industrial Revolution, insights are shared into the cold chain industry where companies respond to increasing quality demands, and how European governments are innovatively responding to challenges of cross-border eCommerce. People are a vital element of the digital transformation and must be on board to drive change. The Digital Transformation of Logistics: Demystifying Impacts of the Fourth Industrial Revolution explains how executives can create sustainable impact and how competencies can be managed in the digital age - especially for sales executives who require urgent upskilling to remain relevant. Best practices are shared for organizational culture change, drawing on studies among senior leaders from the US, Singapore, Thailand, and Australia, and for managing strategic alliances with logistics service providers to offset risks and create cross-functional, cross-company transparency. The Digital Transformation of Logistics: Demystifying Impacts of the Fourth Industrial Revolution provides realistic insights, a ready-to-use knowledge base, and a working vocabulary about current activities and emerging trends of the Logistics industry. Intended readers are supply chain professionals working for manufacturing, trading, and freight forwarding companies as well as students and all interested parties.

## The Guru Guide to Entrepreneurship

What qualities does it take to be a successful entrepreneur? Are some business ideas better than others, and how can I pick the one that's right for me? How do I obtain financing to start a business? How do I write a successful business plan? What is the secret to finding and keeping customers? How do I find, hire, motivate, and retain great employees? For answers to these and other critical questions on the minds of every entrepreneur and aspiring business owner today, there is no better source than those who have been there and done it. Few entrepreneurs have achieved the level of business success realized by the gurus covered here. Now you can find out what they have to say about the most practical aspects of starting and succeeding in the business of your dreams. The Guru Guide(TM) to Entrepreneurship is an indispensable source of inspiration and ideas for anyone who runs, or dreams of running, a business of their own. Some of the Gurus you'll meet: Paul Allen, cofounder, Microsoft Corporation J. Walter Anderson, cofounder, White Castle Mary Kay Ash, founder, Mary Kay Cosmetics Jeff Bezos, founder, Amazon.com Richard Branson, founder, the Virgin Group Charles Brewer, founder, Mindspring.com Warren Buffett, owner, Berkshire Hathaway Ben Cohen, cofounder, Ben & Jerry's Ice Cream Michael Dell, founder, Dell Computers Debbi Fields, founder, Mrs. Fields Cookies, Inc. Bill Gates, cofounder, Microsoft Corporation Earl Graves, founder, Black Enterprise Steve Jobs, cofounder, Apple Computer, Inc. Herb Kelleher, founder, Southwest Airlines Phil Knight, cofounder, Nike Corporation Ray Kroc, founder, McDonald's Corporation Edwin Land, founder, Polaroid Corporation Charles Lazarus, founder, Toys "R" Us Bill Lear, founder, Lear Jet Corporation Tom Monaghan, founder, Domino's Pizza Akio Morita, cofounder, Sony Corporation Fred Smith, founder, Federal Express Thomas Stemberg, cofounder, Staples, Inc. Dave Thomas, founder, Wendy's International, Inc. Jay Van Andel, cofounder, Amway Corporation Sam Walton, founder, Wal-Mart Stores, Inc.

## Cyberprotest

Uses case studies and voices of activists themselves to examine the role of the internet at all levels of environmental activism. Contemporary analysis of forms and processes of radical environmental activism. Documents the negotiations and achievements of environmentalists both in dealing with the tensions of using environmentally damaging technology and in avoiding surveillance and counter-strategies. Will be of interest to students and academics of politics, sociology, environmental studies and anyone who has ever wondered if signing an email petition will make a difference.

## Being Digital Citizens

Developing a critical perspective on the challenges and possibilities presented by cyberspace, this book explores where and how political subjects perform new rights and duties that govern themselves and others online.

## Strategic Management of E-Business

Stephen Chen's textbook helps students develop the knowledge and skills required take part in the formulation and implementation of strategies for businesses competing in electronic markets.

## Fundamentals of Business (black and White)

(Black & White version) Fundamentals of Business was created for Virginia Tech's MGT 1104 Foundations of Business through a collaboration between the Pamplin College of Business and Virginia Tech Libraries. This book is freely available at: <http://hdl.handle.net/10919/70961> It is licensed with a Creative Commons-NonCommercial ShareAlike 3.0 license.

## The Road Ahead

In this clear-eyed, candid, and ultimately reassuring

## Twitter and Tear Gas

A firsthand account and incisive analysis of modern protest, revealing internet-fueled social movements' greatest strengths and frequent challenges To understand a thwarted Turkish coup, an anti-Wall Street encampment, and a packed Tahrir Square, we must first comprehend the power and the weaknesses of using new technologies to mobilize large numbers of people. An incisive observer, writer, and participant in today's social movements, Zeynep Tufekci explains in this accessible and compelling book the nuanced trajectories of modern protests—how they form, how they operate differently from past protests, and why they have difficulty persisting in their long-term quests for change. Tufekci speaks from direct experience, combining on-the-ground interviews with insightful analysis. She describes how the internet helped the Zapatista uprisings in Mexico, the necessity of remote Twitter users to organize medical supplies during Arab Spring, the refusal to use bullhorns in the Occupy Movement that started in New York, and the empowering effect of tear gas in Istanbul's Gezi Park. These details from life inside social movements complete a moving investigation of authority, technology, and culture—and offer essential insights into the future of governance.

## Guide to Management Ideas and Gurus

Good management is a precious commodity in the corporate world. Guide to Management Ideas and Gurus is a straight-forward manual on the most innovative management ideas and the management gurus who developed them. The earlier edition, Guide to Management Ideas, presented the most significant ideas that continue to underpin business management. This new book builds on those ideas and adds detailed biographies of the people who came up with them-the most influential business thinkers of the past and present. Topics covered include: Active Inertia, Disruptive Technology, Genchi Genbutsu (Japanese for "Go and See for Yourself"), The Halo Effect, The Long Tail, Skunkworks, Tipping Point, Triple Bottom Line, and more. The management gurus covered include: Dale Carnegie, Jim Collins, Stephen Covey, Peter Drucker, Philip Kotler, Michael Porter, Tom Peters, and many others.

## Business Ethics

Spanning 25 years of serious writing on hip-hop by noted scholars and mainstream journalists, this comprehensive anthology includes observations and critiques on groundbreaking hip-hop recordings.

### Logistics Management and Strategy

In a world where advanced knowledge is widespread and low-cost labor is readily available, U.S. advantages in the marketplace and in science and technology have begun to erode. A comprehensive and coordinated federal effort is urgently needed to bolster U.S. competitiveness and pre-eminence in these areas. This congressionally requested report by a pre-eminent committee makes four recommendations along with 20 implementation actions that federal policy-makers should take to create high-quality jobs and focus new science and technology efforts on meeting the nation's needs, especially in the area of clean, affordable energy: 1) Increase America's talent pool by vastly improving K-12 mathematics and science education; 2) Sustain and strengthen the nation's commitment to long-term basic research; 3) Develop, recruit, and retain top students, scientists, and engineers from both the U.S. and abroad; and 4) Ensure that the United States is the premier place in the world for innovation. Some actions will involve changing existing laws, while others will require financial support that would come from reallocating existing budgets or increasing them. *Rising Above the Gathering Storm* will be of great interest to federal and state government agencies, educators and schools, public decision makers, research sponsors, regulatory analysts, and scholars.

### That's the Joint!

*Climate Change and Cities* bridges science-to-action for climate change adaptation and mitigation efforts in cities around the world.

### Rising Above the Gathering Storm

We are living in a world full of games. More than 31 million people in the UK are gamers. The average young person will spend 10,000 hours gaming by the age of twenty-one. The future belongs to those who play games. In this ground-breaking book, visionary game designer Jane McGonigal challenges conventional thinking and shows that games - far from being simply escapist entertainment - have the potential not only to radically improve our own lives but to change the world.

### Climate Change and Cities

What Globalization Now Means for Your Business Executives can no longer base their strategies on the assumption that globalization will continue to advance steadily. But how should they respond to the growing pressures against globalization? And what can businesses do to control their destinies in these times of uncertainty? In *The New Global Road Map*, Pankaj Ghemawat separates fact from fiction by giving readers a better understanding of the key trends affecting global business. He also explains how globalization levels around the world are changing, and where they are likely to go in the future. Using the most up-to-date data and analysis, Ghemawat dispels today's most dangerous myths and provides a clear view of the most critical issues facing policy makers in the years ahead. Building on this analysis, with examples from a diverse set of companies across industries and geographies, Ghemawat provides actionable frameworks and tools to help executives revise their strategies, restructure their global footprints, realign their organizations, and rethink how they work with local governments and institutions. In our era of rising nationalism and increased skepticism about globalization's benefits, *The New Global Road Map* delivers the definitive guide on how to compete profitably across borders.

### Reality is Broken

*The Civil Corporation* is an award-winning classic, well recognized as the most insightful exploration of contemporary developments in responsible business practices and their implications for business strategy and public policy. This revised second edition adds a significant new section describing and reflecting on developments since the book's first publication in 2001. This new material draws on the author's practical experience over the last five years working as Chief Executive of Account Ability with some of the world's leading businesses and public bodies on policies and practices that advance the emerging shift in businesses' role in society. This book is top drawer reading for business professionals, management students and academics, and activists and public servants. It goes to the heart of the issue of business in society, cutting through the rhetoric of campaigners and business-speak alike in framing the tough questions in balanced and yet provocative terms. Crucially, it connects an insightful

vista of the broader landscape with a set of practical 'dos' for businesses and their stakeholders that have stood the test of time. The accolade of winning the prestigious Academy of Management Award in 2006 confirms that Zadek has achieved what every author aspires to: a book that is both timely and timeless in its application. This revised edition builds on this success by providing new information and insights for practitioners, academics and students

### The New Global Road Map

Challenging the popular myth of a present-day 'information revolution', *Media Technology and Society* is essential reading for anyone interested in the social impact of technological change. Winston argues that the development of new media forms, from the telegraph and the telephone to computers, satellite and virtual reality, is the product of a constant play-off between social necessity and suppression: the unwritten law by which new technologies are introduced into society only insofar as their disruptive potential is limited.

### The Civil Corporation

*Managing Industrial Knowledge* illuminates the complex processes at work in the creation and successful transfer of corporate knowledge. It is now generally recognized that the competitive advantages of firms depends on their ability to build, utilize and protect knowledge assets. In this volume many of the foremost international authors and pioneers of the study of knowledge in firms present their latest work and insights into organizational knowledge and innovation. In a world where markets, products, technologies, competitors, regulations, and even societies change rapidly, continuous innovation and the knowledge that produces innovation have become key. The chapters in this keynote volume shed new light on the contextual factors in knowledge creation, the links between knowledge and innovation in all aspects of business life and the processes by which these may be fostered or lost in organizations.

### Media, Technology and Society

Listening to, buying and sharing music is an immensely important part of everyday life. Yet recent technological developments are increasingly changing how we use and consume music. This book collects together the most recent studies of music consumption, and new developments in music technology. It combines the perspectives of both social scientists and technology designers, uncovering how new music technologies are actually being used, along with discussions of new music technologies still in development. With a specific focus on the social nature of music, the book breaks new ground in bringing together discussions of both the social and technological aspects of music use. Chapters cover topics such as the use of the iPod, music technologies which encourage social interaction in public places, and music sharing on the internet. A valuable collection for anyone concerned with the future of music technology, this book will be of particular interest to those designing new music technologies, those working in the music industry, along with students of music and new technology.

### Managing Industrial Knowledge

The technology behind computers, fiber optics, and networks did not originate in the minds of engineers attempting to build an Internet. The Internet is a culmination of intellectual work by thousands of minds spanning hundreds of years. We have built concept upon concept and technology upon technology to arrive at where we are today, in a world constructed of silicon pathways and controlled by silicon processors. From computers to optical communications, *The Silicon Web: Physics for the Internet Age* explores the core principles of physics that underlie those technologies that continue to revolutionize our everyday lives. Designed for the nonscientist, this text requires no higher math or prior experience with physics. It starts with an introduction to physics, silicon, and the Internet and then details the basic physics principles at the core of the information technology revolution. A third part examines the quantum era, with in-depth discussion of digital memory and computers. The final part moves onto the Internet era, covering lasers, optical fibers, light amplification, and fiber-optic and wireless communication technologies. The relation between technology and daily life is so intertwined that it is impossible to fully understand modern human experience without having at least a basic understanding of the concepts and history behind modern technology, which continues to become more prevalent as well as more ubiquitous. Going beyond the technical, the book also looks at ways in which science has changed the course of history. It clarifies common misconceptions while offering insight on the social impacts of science with an emphasis on information technology. As a pioneering researcher in quantum

mechanics of light, author Michael Raymer has made his own significant contributions to contemporary communications technology

### Consuming Music Together

In *Technocrats of the Imagination* John Beck and Ryan Bishop explore the collaborations between the American avant-garde art world and the military-industrial complex during the 1960s, in which artists worked with scientists and engineers in universities, private labs, and museums. For artists, designers, and educators working with the likes of Bell Labs, the RAND Corporation, and the Los Angeles County Museum of Art, experiments in art and technology presaged not only a new aesthetic but a new utopian social order based on collective experimentation. In examining these projects' promises and pitfalls and how they have inspired a new generation of collaborative labs populated by artists, engineers, and scientists, Beck and Bishop reveal the connections between the contemporary art world and the militarized lab model of research that has dominated the sciences since the 1950s.

### The Silicon Web

Popular culture is taking an ever firmer grip on our living environment and on our lives. Survey of the urban pop culture and of concepts of pop philosophy. Bespreking van K. Wenz 'Changing popular culture in relation to urban space' verschenen in: *Krisis*. (2008)1(.89-91).

### Technocrats of the Imagination

This book advances a critical political economy approach to EdTech and analyses the economic, political and ideological structures and social power relations that shape the EdTech industries and drive EdTech's development and diffusion. Particular attention is paid to the integration of EdTech with some of the most contentious developments of our time, including platformization and data-veillance, the automation of work and labor, and globalization-imperialism. By using a political economy of communication approach, this book will be of value to anyone interested in the current transformations of capitalism, the State, higher education and online learning in the digital age.

## Mediapolis

'The language is highly accessible and this makes it particularly suitable for undergraduate and international students at all levels. The combination of extended case material, shorter cases and illustrations of management in practice makes for a varied and stimulating approach. The activities will encourage and enable students to work independently to develop both their knowledge and skills.' Abby Cathcart, Sunderland Business School, University of Sunderland 'I like the activities that explicitly ask for critical reflection and am sure that my students will benefit from the development of their critical thinking skills. The cases and examples in the book are helpful both because they come from a wide variety of national backgrounds and because companies like Ryanair and Nokia are familiar names!' Ad van Iterson, Organization and Strategy Department, Faculty of Economics and Business Administration, Maastricht University 'All the case studies are both relevant and appropriate: there is a wide spread of international examples and a striking variety of organisations throughout the chapters, which will undoubtedly enhance the students' learning process.' Business, University College Dublin What is 'management', and what activities and behaviour does it entail? How do ideas and theories of management apply to commercial enterprise and other areas of work? How is the environment of management changing, and what are the impacts of recent trends? Management: An Introduction addresses these and many other questions by providing a comprehensive account of the themes and functions of management. Aimed at the first-time student of the subject and written in a highly accessible style, this is an academically rigorous text which brings the topic to life with a wide range of appealing and readily identifiable examples. Among the most valuable features and aids to learning in the book are: Case studies on organisations as diverse as Ryanair, Vodafone/Ericsson and Oxfam, to provide relevant illustrations of theory in practice. Critical Reflections to encourage the application of personal experience and critical thinking to the issues in question. Skills Development Activities to build practical and work-based competences. full Glossary. A companion website at [www.pearsoned.co.uk/boddy](http://www.pearsoned.co.uk/boddy) provides tools for revision, such as self-assessment questions and flashcards, and for research, such as weblinks and case study updates. David Boddy is a Research Fellow at the School of Business and Management, University of Glasgow. He is author of two other books published by Pearson Education: Managing Information Systems: An Organisational Perspective (2005), and Managing Projects (2002).

## EdTech Inc.

A BLOOMBERG BEST BOOK OF THE YEAR WINNER - SILVER MEDAL, AXIOM BUSINESS BOOK AWARDS 2018 FOREWORD BY NOURIEL ROUBINI SuperHubs is a rare, behind-the-scenes look at the global financial system and the powerful personal networks through which it is run, at the centre of which sit the Elites - the SuperHubs. Combining an insider's knowledge with principles of network science, Sandra Navidi offers a startling new perspective on how the financial system really operates. SuperHubs reveals what happens at the exclusive, invitation-only platforms - The World Economic Forum in Davos, the meetings of the International Monetary Fund, think-tank gatherings, power lunches, charity events, and private parties. This is the most vivid portrait to date of the global elite: the bank CEOs, fund managers, billionaire financiers and politicians who, through their interlocking relationships and collective influence are transforming the future of our financial system and, for better or worse, shaping our world.

## Management

Incorporating developments from both academia and industry, this exploration of brands, brand equity and strategic brand management combines a theoretical foundation with numerous techniques and practical insights. Suitable for both graduates and upper-level undergraduates.

## SuperHubs

Strategic Brand Management
