On Rational Historiography

This volume offers a selection of critical essays on texts that can be broadly categorized as popular literature. The essays are inclined to question the idea of 'the Canon' and re-consider the divide between the canonical and the popular. As such, besides engaging in a serious critical reading of typical popular literary texts like *The Jungle Book* and *The Hound of the Baskervilles*, the book also considers populist tendencies in literary classics like *Jane Eyre* and *Frankenstein*. It will be of interest to young scholars and readers of popular literature, science fiction, detective fiction, genre studies, and culture studies. The volume's contributors are: Anisha Ghosh, Arnab Dasgupta, Goutam Karmakar, Jaya Sarkar, Jaydip Sarkar, Madhuparna Mitra Guha, Mandika Sinha, Mitarik Barma, Pinaki Roy, Puja Chakraborty, Rajadipta Roy, Rupayan Mukherjee, Shirsendu Mondal, Shubham Dey.

Popular Literature

How do historians, comparative linguists, biblical and textual critics and evolutionary biologists establish beliefs about the past? How do they know the past? This book presents a philosophical analysis of the disciplines that offer scientific knowledge of the past. Using the analytic tools of contemporary epistemology and philosophy of science the book covers such topics as evidence, theory, methodology, explanation, determination and underdetermination, coincidence, contingency and counterfactuals in historiography. Aviezer Tucker's central claim is that historiography as a scientific discipline should be thought of as an effort to explain the evidence of past events. He also emphasizes the similarity between historiographic methodology to Darwinian evolutionary biology. This is an important, fresh approach to historiography and will be read by philosophers, historians and social scientists interested in the methodological foundations of their disciplines.

Journal of Indian Council of Philosophical Research

This book presents a series of case studies and reflections on the historiographical assumptions, methods and approaches that shape the way in which philosophers construct their own past. The chapters in the volume advance discussion of the methods of historians of philosophy, while at the same time illustrating the various ways in which philosophical canons come into existence, debunking the myth of analytical philosophy's ahistoricism and providing a deeper understanding of the roles historiographical devices play in philosophical thought. More importantly, the contributors attempt to understand history of philosophy in connection with other historical and historiographical approaches: contributors engage classical history of science, sociology of knowledge, history of psychology and historiography, in dialogue with historiographical practices in philosophy more narrowly construed. Additionally, select chapters adopt a more diverse perspective, by making place for non-Western approaches and for efforts to construe new philosophical narratives that do justice to the voice of women across the centuries. *Historiography and the Formation of Philosophical Canons* will be of interest to researchers and advanced students working in history of philosophy, meta-philosophy, philosophy of history, historiography, intellectual history and sociology of knowledge.

Guide to Indian Periodical Literature

Recent trends in the humanities and social sciences have forced on academia what many might call a crisis of history. Conventional assumptions about coherence and meaning in history are being challenged by questions concerning the relevance of history and attempts to refigure its content and mode of representation. The publication of *History and...* appears at a critical moment in our efforts to understand the importance of history as it relates to a wide range of scholarly disciplines. History

and... brings together some of its most thoughtful scholars to better understand not only how our disciplines are connected to professional historiography but how our attempts to understand cultures are connected to our pasts.

Indian National Bibliography

This book introduces the methodological and philosophical problems with which modern history of science is concerned, offering a comprehensive and critical review through description and evaluation of significant historiographical viewpoints. Incorporating discussion of key problems in general historical writing, with examples drawn from a range of disciplines, this non-elementary introduction bridges the gap between general history and history of science. Following a review of the early development of the history of science, the theory of history as applied to science history is introduced, examining the basic problems which this generates, including problems of periodisation, ideological functions, and the conflict between diachronical and anachronical historiography. Finally, the book considers the critical use, and analysis, of historical sources, and the possibility of the experiential reconstruction of history. Aimed primarily at students, the book's broad scope and integration of historical, philosophical and scientific matters will interest philosophers, sociologists and general historians, for whom there is no alternative introduction to the subject at this level.

Our Knowledge of the Past

Are historians story-tellers? Is it possible to tell true stories about the past? These are just two of the questions raised in this comprehensive collection of texts about philosophy, theory and methodology of writing history.

Indian Books in Print

Based on lectures written in 1936 on the philosophy of history.

Historiography and the Formation of Philosophical Canons

The historiographers of religious studies have written the history of this discipline primarily as a rationalization of ideological, most prominently theological and phenomenological ideas: first through the establishment of comparative, philological and sociological methods and secondly through the demand for intentional neutrality. This interpretation caused important roots in occult-esoteric traditions to be repressed. This process of "purification" (Latour) is not to be equated with the origin of the academic studies. De facto, the elimination of idealistic theories took time and only happened later. One example concerning the early entanglement is Tibetology, where many researchers and respected chair holders were influenced by theosophical ideas or were even members of the Theosophical Society. Similarly, the emergence of comparatistics cannot be understood without taking into account perennialist ideas of esoteric provenance, which hold that all religions have a common origin. In this perspective, it is not only the history of religious studies which must be revisited, but also the partial shaping of religious studies by these traditions, insofar as it saw itself as a counter-model to occult ideas.

India's Intellectual Traditions

"American intellectual historians need to pay more attention to how elites relate to broader audiences. Hollinger's work is in the vanguard of recent intellectual history and it is a joy to observe a true intellectual in discourse with his peers."--History: Reviews of Books.

History And--

A comprehensive guide to the history, beliefs, concepts, practices, and major figures of religions past and present.

An Introduction to the Historiography of Science

This richly textured book bridges analytic and hermeneutic and phenomenological philosophy of science. It features unique resources for students of the philosophy and history of quantum mechanics and the Copenhagen Interpretation, cognitive theory and the psychology of perception, the history and philosophy of art, and the pragmatic and historical relationships between religion and science.

The History and Narrative Reader

"The book takes a closer look at the phenomenon of the 'opportunism' of minority cultures - in the Indian context, the Dalit and the Muslim - and suggests that this might be the consequence of nationalism itself, especially of postcolonial nationalisms. For it is nationalism, in fact, which produces the minority problem in the first place."--BOOK JACKET.

Manushi

This book provides an account of the distinctive way in which penal power developed outside the metropolitan centre. Proposing a radical revision of the Foucauldian thesis that criminological knowledge emerged in the service of a new form of power – discipline – that had inserted itself into the very centre of punishment, it argues that Foucault's alignment of sovereign, disciplinary and governmental power will need to be reread and rebalanced to account for its operation in the colonial sphere. In particular it proposes that colonial penal power in India is best understood as a central element of a liberal colonial governmentality. To give an account of the emergence of this colonial form of penal power that was distinct from its metropolitan counterpart, this book analyses the British experience in India from the 1820s to the early 1920s. It provides a genealogy of both civil and military spheres of government, illustrating how knowledge of marginal and criminal social orders was tied in crucial ways to the demands of a colonial rule that was neither monolithic nor necessarily coherent. The analysis charts the emergence of a liberal colonial governmentality where power was almost exclusively framed in terms of sovereignty and security and where disciplinary strategies were given only limited and equivocal attention. Drawing on post-colonial theory, *Penal Power and Colonial Rule* opens up a new and unduly neglected area of research. An insightful and original exploration of theory and history, this book will appeal to students and scholars of Law, Criminology, History and Post-colonial Studies.

The Book Review

Vols. for 1969- include a section of abstracts.

The Idea of History

"... a fascinating and thought-provoking book ..." —The Jewish Quarterly "The best introduction to the talmudic literature that is available. ... An extraordinarily important book, brilliant, and lucid." —Daniel Boyarin "Menachem Fisch has written a rich, thoughtful book. One will come away from *Rational Rabbis* with a deeper understanding of just what the Talmud is." —Hilary Putnam Talmudic culture is often viewed as bound by its traditions. Menachem Fisch maintains that a close reading of talmudic texts frequently reveals their authors as rabbis who, rather than conform uncritically to tradition, knowingly set out to expose and resolve problems inherent in the received traditions.

Occult Roots of Religious Studies

The articles in this volume have been first presented during an international Conference organised by the Greek Society for the History of Science and Technology in June 1990 at Corfu. The Society was founded in 1989 and planned to hold a series of meetings to impress upon an audience comprised mainly by Greek students and scholars, the point that history of science is an autonomous discipline with its own plurality of approaches developed over the years as a result of long discussions and disputes within the community of historians of science. The Conference took place at a time when more and more people came to realise that the future of the Greek Universities and Research Centres depends not only on the progress of the institutional reforms, but also very crucially on the establishment of new and modern subject areas. Though there have been significant steps towards such a direction in the physical sciences, mathematics and engineering, the situation in the so-called humanities has been, at best, confusing. Political expediencies of the post war years and ideological commitments to a glorious, yet very distant past, paralysed the development of the humanities and constrained them within a framework which could not allow much more than a philological approach.

Historiography and Historians in India Since Independence

This book uses the uniquely positioned culture of East African Asians to reflect upon the most vexing issues in postcolonial literary studies today. By examining the local histories and discourses that underpin East African Asian literature, it opens up and reflects upon issues of alienation, modernity, migration, diaspora, memory and nationalism.

The Philosophy of History

Originally published in German in 1935, this monograph anticipated solutions to problems of scientific progress, the truth of scientific fact and the role of error in science now associated with the work of Thomas Kuhn and others. Arguing that every scientific concept and theory—including his own—is culturally conditioned, Fleck was appreciably ahead of his time. And as Kuhn observes in his foreword, "Though much has occurred since its publication, it remains a brilliant and largely unexploited resource." "To many scientists just as to many historians and philosophers of science facts are things that simply are the case: they are discovered through properly passive observation of natural reality. To such views Fleck replies that facts are invented, not discovered. Moreover, the appearance of scientific facts as discovered things is itself a social construction, a made thing. A work of transparent brilliance, one of the most significant contributions toward a thoroughly sociological account of scientific knowledge."—Steven Shapin, *Science*

The Encyclopedia of Religion

There are many stories we can tell about the past, and we are not, perhaps, as free as we might imagine in our choice of which stories to tell, or where those stories end. John Arnold's *Very Short Introduction* is a stimulating essay about how we study and understand history. The book begins by inviting us to think about various questions provoked by our investigation of history, and explores the ways these questions have been answered in the past. Concepts such as causation, interpretation, and periodization, are introduced by means of concrete examples of how historians work, giving the reader a sense of the excitement of discovering not only the past, but also ourselves. ABOUT THE SERIES: The *Very Short Introductions* series from Oxford University Press contains hundreds of titles in almost every subject area. These pocket-sized books are the perfect way to get ahead in a new subject quickly. Our expert authors combine facts, analysis, perspective, new ideas, and enthusiasm to make interesting and challenging topics highly readable.

The Structure of Scientific Revolutions

Historians of British colonial rule in India have noted both the place of military might and the imposition of new cultural categories in the making of Empire, but Bhavani Raman, in *Document Raj*, uncovers a lesser-known story of power: the power of bureaucracy. Drawing on extensive archival research in the files of the East India Company's administrative offices in Madras, she tells the story of a bureaucracy gone awry in a fever of documentation practices that grew ever more abstract—and the power, both economic and cultural, this created. In order to assert its legitimacy and value within the British Empire, the East India Company was diligent about record keeping. Raman shows, however, that the sheer volume of their document production allowed colonial managers to subtly but substantively manipulate records for their own ends, increasingly drawing the real and the recorded further apart. While this administrative sleight of hand increased the company's reach and power within the Empire, it also bolstered profoundly new orientations to language, writing, memory, and pedagogy for the officers and Indian subordinates involved. Immersed in a subterranean world of delinquent scribes, translators, village accountants, and entrepreneurial fixers, *Document Raj* maps the shifting boundaries of the legible and illegible, the legal and illegitimate, that would usher India into the modern world.

Hermeneutic Philosophy of Science, Van Gogh's Eyes, and God

An anniversary edition of an influential book that introduced a groundbreaking approach to the study of science, technology, and society. This pioneering book, first published in 1987, launched the new field of social studies of technology. It introduced a method of inquiry—social construction of technology, or SCOT—that became a key part of the wider discipline of science and technology studies. The book helped the MIT Press shape its STS list and inspired the *Inside Technology* series. The thirteen essays in the book tell stories about such varied technologies as thirteenth-century galleys, eighteenth-century cooking stoves, and twentieth-century missile systems. Taken together, they affirm the fruitfulness of an

approach to the study of technology that gives equal weight to technical, social, economic, and political questions, and they demonstrate the illuminating effects of the integration of empirics and theory. The approaches in this volume—collectively called SCOT (after the volume's title) have since broadened their scope, and twenty-five years after the publication of this book, it is difficult to think of a technology that has not been studied from a SCOT perspective and impossible to think of a technology that cannot be studied that way.

Last and First Men

Last and First Men is a "future history" science fiction novel, describing the history of humanity from the present onwards across two billion years and eighteen distinct human species, of which our own is the first. Conception of history follows a repetitive cycle with many varied civilizations rising from and descending back into savagery over millions of years, as the later civilizations rise to far greater heights than the first. It is an early example of the fictional supermind; a consciousness composed of many telepathically linked individuals.

Last and First Men

One of the most extraordinary, imaginative and ambitious novels of the century: a history of the evolution of humankind over the next 2 billion years. Among all science fiction writers Olaf Stapledon stands alone for the sheer scope and ambition of his work. First published in 1930, Last and First Men is full of pioneering speculations about evolution, terraforming, genetic engineering and many other subjects.

Last and First Men

A human narrator from England is transported out of his body via unexplained means. He realizes he is able to explore space and other planets. After exploring a civilization on another planet in our galaxy at a level of development similar to our own that existed millions of years ago thousands of light years from Earth (the "Other Earth") in some detail, his mind merges with that of one of its inhabitants, and as they travel together, they are joined by still more minds or group-minds. This snowballing process is paralleled by the expansion of the book's scale, describing more and more planets in less and less detail. The disembodied travelers encounter many ideas that are interesting from both science-fictional and philosophical points of view. Star Maker tackles philosophical themes such as the essence of life, of birth, decay and death, and the relationship between creation and creator. A pervading theme is that of progressive unity within and between different civilizations.

Last Men in London by Olaf Stapledon is a science fiction novel offering profound reflections on humanity and its future. Stapledon's narrative, told through the eyes of a last-man survivor, merges speculative fiction and deep philosophical discourse, resulting in a unique and thought-provoking read.

Woodward exposes one of the final pieces of the Richard Nixon puzzle, examining the untold story of Alexander Butterfield, the Nixon aide who disclosed the secret White House taping system that changed history and led to Nixon's resignation. In forty-six hours of interviews with Butterfield, supported by thousands of documents, many of them original and not in the presidential archives and libraries, Woodward has uncovered new dimensions of Nixon's secrets, obsessions, and deceptions.

The Last of the President's Men

John Wainwright is extremely intelligent even if he is stunted in his physical development. He believes in communist ideas but is critical of mainstream Marxism. He is also quite vain and highly skillful in the arts of seduction. From a human viewpoint, he can be considered amoral or perhaps to be following a morality beyond human understanding. The novel explores the theme of the Übermensch (superman) in the character of Odd John whose supernormal human mentality inevitably leads to conflict with normal human society and the utopian colony founded by him and other superhumans.

A work of unprecedented scale in the genre, it describes the history of humanity from the present onwards across two billion years and eighteen distinct human species, of which our own is the first and most primitive. The book anticipates genetic engineering, and the idea of superminds composed of many telepathically-linked individuals. A controversial part of the book depicts humans, in the far-off future, escaping the dying Earth and settling on Venus-in the process totally exterminating its native inhabitants, a marine intelligent species. Stapledon's book has been interpreted by some as condoning such interplanetary genocide as a justified act if necessary for racial survival, though a number of Stapledon's partisans denied that such was his intention, arguing instead that Stapledon was merely showing that although mankind had advanced in a number of ways in the future, at bottom it still possessed the same capacity for savagery as it has always had.

Last and First Men

William Olaf Stapledon is best remembered for the extraordinary works of speculative fiction he published between 1930 and 1950. As a novelist, he was known as the spokesman for the Age of Einstein and has influenced writers as diverse as Virginia Woolf, Arthur C. Clarke, and Doris Lessing. This biography is the first to draw on a vast body of unpublished and private documents—interviews, correspondence, archival material, and papers in private hands—to reveal fully the internal struggles that shaped Stapledon's life and reclaim for public attention a distinctive voice of the modern era. Late in his life in an unpublished "letter to the future" Stapledon unwittingly provided the rationale for his biography: "It is just possible that my very obscurity may fit me to speak more faithfully for my period than any of its great unique personalities. A pacifist in World War I, an advocate of European unity and world government, one of the first teachers in the Workers' Educational Association, and an early protestor against apartheid, Stapledon turned utopian beliefs into practical politics. With roots in the shipping worlds of Devon, Liverpool, and the Suez Canal, he was transformed from a self-described provincial on the margins of English literary and political life into a visionary idealist who attracted the attention of scientists, journalists, and novelists, and, given his left-wing political affiliations, even the F.B.I. Stapledon's novels—Last and First Men, Star Maker, Odd John, and Sirius—have gathered a passionate following, and they have seldom been out of print in the last twenty-five years. But the personal experiences and political commitments that shaped this creative work have, until now, barely been known. Robert Crossley's work reveals how, in public and in private, in his social activism as in his fiction, Olaf Stapledon embodied many of the modern era's anxieties and hopes that allow his works to continue to speak to and for the future.

Last and First Men: A Story of the Near and Far Future is a "future history" science fiction novel written in 1930 by the British author Olaf Stapledon. First published nearly 70 years ago, this masterpiece is regarded as one of the most influential science fiction novels of the 20th century. Olaf Stapledon creates a history of the evolution of humankind over the next two billion years, and has lots of it right! It's so vast; it brings the concept of 'time' closer to the human experience. "No book before or since has ever had such an impact upon my imagination," declared 2001 author Arthur C. Clarke of this masterpiece of science fiction. An imaginative, ambitious history of humanity's future that spans billions of years, this 1930 epic abounds in prescient speculations. Not only a must-read for scholars of the genre but even for those who want to look beyond their own immortality, as well as our civilizations immortality.

The Children of Men

The unfinished manuscript of *The First Man* was discovered in the wreckage of car accident in which Camus died in 1960. Although it was not published for over thirty years, it was an instant bestseller when it finally appeared in 1994. The 'first man' is Jacques Cormery, whose poverty-stricken childhood in Algiers is made bearable by his love for his silent and illiterate mother, and by the teacher who transforms his view of the world. The most autobiographical of Camus's novels, it gives profound insights into his life and the powerful themes underlying his work.

Francis Fukuyama's prescient analysis of religious fundamentalism, politics, scientific progress, ethical codes, and war is as essential for a world fighting fundamentalist terrorists as it was for the end of the Cold War. Now updated with a new afterword, *The End of History and the Last Man* is a modern classic.

"*The Men of the Last Frontier*" is a 1922 work by Grey Owl. Part memoir, part chronicle of the vanishing Canadian wilderness, and part collection First Nations lore and stories. His first book, "*The Men of the Last Frontier*" is an impassioned cry for the conservation of the natural world that is as poignant now as when first published. Archibald Stansfeld Belaney (1888–1938), also known as Grey Owl, was a British-born Canadian fur trapper, conservationist, and writer. In life, he pretended to be a First Nations person, but it was later discovered that he was in fact not Indigenous—revelations that greatly tarnished his reputation. Other notable works by this author include: "*The Men of the Last Frontier*", "*Pilgrims of the Wild*", and "*Tales of an Empty Cabin*". This classic work is being republished now in a new edition with specially curated introductory material.

The Men of the Last Frontier

The narrator of *Nebula Maker* stands on a hill and sees a vision that leads him to the birth of the universe. He witnesses the creation of the nebulae and the formation of galactic communities as well as the flowering of the personalities of the nebulae. The establishment of pacific and militaristic camps and their relationship leads to events of cosmic strife, not unlike the history of our world in the twentieth century.

Nebula Maker

One of the most extraordinary, imaginative and ambitious novels of the century: a history of the evolution of humankind over the next 2 billion years. Among all science fiction writers Olaf Stapledon stands alone for the sheer scope and ambition of his work. First published in 1930, *Last and First Men* is full of pioneering speculations about evolution, terraforming, genetic engineering and many other subjects.

One of the twentieth century's enduring works, *One Hundred Years of Solitude* is a widely beloved and acclaimed novel known throughout the world and the ultimate achievement in a Nobel Prize-winning career. The novel tells the story of the rise and fall of the mythical town of Macondo through the history of the Buendía family. Rich and brilliant, it is a chronicle of life, death, and the tragicomedy of humankind. In the beautiful, ridiculous, and tawdry story of the Buendía family, one sees all of humanity, just as in the history, myths, growth, and decay of Macondo, one sees all of Latin America. Love and lust, war and revolution, riches and poverty, youth and senility, the variety of life, the endlessness of death, the search for peace and truth—these universal themes dominate the novel. Alternately reverential and comical, *One Hundred Years of Solitude* weaves the political, personal, and spiritual to bring a new consciousness to storytelling. Translated into dozens of languages, this stunning work is no less than an account of the history of the human race.

One Hundred Years of Solitude

From their beginnings foraging at the feet of the dinosaurs, through the apocalypse of an asteroid strike, through countless years of the day to day life and death dramas of survival of the fittest, to the rise and fall of mankind and the final destruction of earth by the expanding sun, the primates have survived. This is their story. *EVOLUTION* follows the ebb and flow of the fortunes of one group of creatures as they change and adapt to their world somewhere on the horn of Africa. It turns the story of Darwinian evolution into a constant drama, a daily life and death struggle, a heroic story of life's endurance. It is a story that transcends generations, species, mankind and, in the end, the Earth itself. In the tradition of Olaf Stapledon and HG Wells.

The Martians are moving northwards, conquering Queen Victoria's Britain. The hideous alien beings, in their great tripod fighting machines, kill and destroy everything that stands in their path. In the Victorian Fenlands, Colonel Blake has assembled a militia from his Cambridgeshire Yeomanry and forcefully conscripted civilian help where necessary. Colonel Blake, of the Wake, oversees his bold ad-hoc engineering plan with help of a railway system that is operating on borrowed time. He must complete his plan before the giant tripod machines arrive and destroy the precious rail line. Everything must be properly prepared. Quickly and as efficiently as possible. Once done, the Wake Men will confront the confounded Martians with a few surprises of their own.

Last and First Men: A Story of the Near and Far Future is a "future history" science fiction novel written in 1930 by the British author Olaf Stapledon.

Last and First Men Illustrated Edition

Last and First Men: A Story of the Near and Far Future is a science fiction novel written in 1930 by the British author Olaf Stapledon. A work of unprecedented scale in the genre, it describes the history of humanity from the present onwards across two billion years and eighteen distinct human species, of which our own is the first and most primitive. Stapledon's conception of history is based on the Hegelian Dialectic, following a repetitive cycle with many varied civilizations rising from and descending back into savagery over millions of years, but it is also one of progress, as the later civilizations rise to far greater heights than the first. The book anticipates genetic engineering, and the idea of superminds composed of many telepathically-linked individuals. A controversial part of the book depicts humans, in the far-off future, escaping the dying Earth and settling on Venus—in the process totally exterminating its native inhabitants, a marine intelligent species. Stapledon's book has been interpreted by some as condoning such interplanetary genocide as a justified act if necessary for racial survival, though a number of Stapledon's partisans denied that such was his intention, arguing instead that Stapledon was merely showing that although mankind had advanced in a number of ways in the future, at bottom it still possessed the same capacity for savagery as it has always had.

'A beautiful, beguiling book full of resonances that continue to sound long after you've turned the final page. Its imagining is magical, its execution dazzlingly skilful.' Sunday Tribune Ghosts opens with a shipwreck, leaving a party of sightseers temporarily marooned on an island. The stranded castaways make their way towards the big isolated house which is home to the reclusive Professor Silas Kreutznaer and his laconic assistant, Licht, but it is also home to another, unnamed presence . . . Onto this seemingly haunted island, where a strange singing hangs in the air, John Banville drops an intriguing cast of characters – including a murderer – and weaves a tale where the details are clear but the conclusion polymorphous – shifting appearances, transformations and thwarted assumptions make this world of uneasy calm utterly enthralling.
