Animals are eukaryotes. Their genetic material (DNA) is enclosed in a nucleus.

The function of the nucleus is to enclose the genetic material.

The cytoplasm is a watery solution where chemical reactions take place (eg the first stage of respiration).

The cell membrane controls the molecules that can enter and leave the cell.

Mitochondria and ribosomes are too small to be seen in this picture.

Mitochondria are where aerobic respiration takes place.

Ribosomes are the sites of protein synthesis.
