Vibrational Waters. The Therapeutical Properties of Sacred Springs By Fabio Nocentini This book addresses in detail the subject of vibrational waters: waters that flow in locations of high energy and that can be used in a similar way to homeopathic and Bach flower remedies to promote mental and physical wellbeing. Some of them are also called "Marian Waters" or "Holy Waters," when they originate in a place dedicated to the Catholic faith, yet they are all considered vibrational remedies in every respect, as they have specific energy frequencies. Available in many countries, these waters can be found in shrines or temples of various religions, but also in archaeological or naturalist sites: from Lourdes to the Japanese temple of Kibune, from Fatima and Santa Lucia to Machu Picchu, from the River Ganges and River Jordan to grottos and monasteries. 50 different waters have been studied, using techniques such as dowsing and kinesiographical testing. Each water is accurately described in an individual Descriptive Profile, that contains a large amount of information on the curative properties of the water for emotional and mental problems, how it can improve the related physical disturbances, its special uses (for

example, application on the body or purification of the environment), the meridians (Traditional Chinese Medicine) and chakras on which it acts and the analogy with Bach flower remedies. Other chapters are dedicated to the ways of using vibrational waters, the procedure to faithfully reproduce them and the methods adopted to discover their characteristics. The final chapter reports some Summarizing Tables to find the most appropriate waters in relation to different problems. LIST OF THE 50 WATERS PRESENTED IN THE E-BOOK: Banneux (Belgium), Boa Vontade (Brazil), Shrine of Caravaggio (Italy), Chalice Well (United Kingdom), Collevalenza (Italy), Delphi (Greece), Einsiedeln (Switzerland), Ephesus (Turkey), Fatima (Portugal), Fonte delle Fate (Italy), Gallinaro (Italy), River Ganges (India), Gibilmanna (Italy), River Jordan (Israel), Kibune (Japan), Saint Konrad (Germany), La Salette (France), Lichen (Poland), Loreto (Italy), Lourdes (France), Machu Picchu (Peru), Madonna del Sasso (Italy), Maranatha (USA), Maria SS. della Fontenova (Italy), Maria SS. dello Splendore (Italy), Medjugorje (Bosnia and Herzegovina), Montichiari (Italy), Notre-Dame du Folgoet (France), Notre-Dame de la Guérison (Italy), Omiwa (Japan), Oropa (Italy), Otto (Italy), Our Lady of Knock (Ireland), Shrine of Padre Pio (Italy), Sacro Speco (Italy), Saint Ann (USA), Saint Columba (United Kingdom), Saint Nectan (United Kingdom), Saint Paraskevi (USA), Saint-Sulpice (France), San Damiano (Italy), San Filippo Benizi (Italy), San Lazzaro degli Armeni (Italy), Santa Lucia (Italy), Santa Maria alla Fontana (Italy), Santa Maria de Guadalupe (Mexico), Santa Maria della Salute (Italy), Santa Maria in Via (Italy), Santiago de Compostela (Spain), Su Tempiesu (Italy). A popular resource promoting clinical excellence in palliative care, this ninth edition has been updated by authors Professor Rod MacLeod and Dr Stephen Macfarlane to include comprehensive guidelines for people with dementia receiving end-of-life care. It builds on previous editions to address the fact that dementia is now a leading cause of death across the globe but that often people with dementia are more likely to receive the palliative care that they need. Although small in size – for ease of use by clinicians – the book's impact is large and is often purchased by families and patients to help them understand the symptoms, treatments and drugs they are encountering. The Palliative Care Handbook offers a thorough understanding of symptoms and treatments which emphasise the importance of a holistic approach to managing patients' physical, psychological, social and spiritual needs. The first section of the book provides an explanation of palliative care as well as guidelines for alleviation of the symptoms and challenges commonly encountered. Considerations of the needs of the person with dementia are now embedded throughout this section. The second section is a comprehensive listing of drug information including unlicensed uses and interactions. Stedman's Medical Transcription Skill Builders

In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. Communities in Action: Pathways to Health Equity seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.
