When she randomly runs into her childhood crush, Santi, on vacation, it feels like the stars are trying to tell her something. Memories of their time growing up in Lipa—not to mention the steamy kiss they share when they reconnect—get her heart pounding. But she has to go back to Lipa while he's headed for Manila, and long distance is kind of an issue. Until he moves back home...and distance becomes the least of their problems. Estranged hotel heir Anton "Santi" Santillan is left adrift when his grandfather abruptly cuts him out of the family business. But he finds his footing again running a small niche hotel back in Lipa. The downside of living in his old hometown: it's no Manila, that's for sure. The upside: seeing Kira again. Kira, who loves food as much as he does. Kira, who loves kissing as much as he does. Convex optimization problems arise frequently in many different fields. This book provides a comprehensive introduction to the subject, and shows in detail how such problems can be solved numerically with great efficiency. The book begins with the basic elements of convex sets and functions, and then describes various classes of convex optimization problems. Duality and approximation techniques are then covered, as are statistical estimation techniques. Various geometrical problems are then presented, and there is detailed discussion of unconstrained and constrained minimization problems, and interior-point methods. The focus of the book is on recognizing convex optimization problems and then finding the most appropriate technique for solving them. It contains many worked examples and homework exercises and will appeal to students, researchers and practitioners in fields such as engineering, computer science, mathematics, statistics, finance and economics.

New materials enable advances in engineering design. This book describes a procedure for material selection in mechanical design, allowing the most suitable materials for a given application to be identified from the full range of materials and section shapes available. A novel approach is adopted not found elsewhere. Materials are introduced through their properties; materials selection charts (a new development) capture the important features of all materials, allowing rapid retrieval of information and application of selection techniques. Merit indices, combined with charts, allow optimisation of the materials selection process. Sources of material property data are reviewed and approaches to their use are given. Material processing and its influence on the design are discussed. The book closes with chapters on aesthetics and industrial design. Case studies are developed as a method of illustrating the procedure and as a way of developing the ideas further.

Materials Selection in Mechanical Design
