The correct way to put a 'bobbin' into its 'bobbin case' is as shown, following the direction of the slot that places the thread under the pressure of the 'small metallic tensioner'!

The other little bolt is the regulator for the thread tension

I am trying out the tension of the thread... I think, it is still too tight, so I have to unscrew a little.

As you can see, the little bolt is very minute, so, be careful!

Pull the little lever to take the 'bobbin case' out.

Move upwards the presser bar lifter to release/loosen the tension plates'.

Sometimes, a needle threader is useful.

Both threads must be the same thickness.

Those 'red thread points' mean that the 'bobbin tension is too tight.

I am adding more tension to the upper red thread in order to pull the white thread' upwards.

What happens if I add more tension to the 'upper plates'?

If we add more tension to the upper tension plates the white thread' is pulled upwards

So, I have to loosen the tension a little to get a nice sewing again.

First thing I want to do is put it though this top loop, and then I'm going to pull the thread down, and that's going to pull the thread through the tension disks.

So, you always want to make sure that your thread is through the tension disks, which will change the tension on your sewing.

And now I need to put my thread through this piece that pulls the thread up and down.

So, I want the lever in its highest position, and then I'm going to pull the thread through.

Now, some machines, like mine, have an automatic needle threader.

If the needle is in the highest position, I can just pull this down, and a little, tiny hook goes though the eye of the needle.
