There is an SME operating as a supplier in the automotive industry (3,500 employees). It is desperately looking for software developers. Relying on job ads only doesn't seem to lead to expected results anymore. Engaging an executive search consultancy turns out to be too expensive. What to do?

In recent years a company had to deal with an increasing turnover among its most talented and most motivated people. Further research and discussions made clear that there is a lack of career prospects among most talented employees. At the same time key positions mainly have been filled with external candidates. What to do?

The new externally hired CEO at an insurance company became instantly aware of the lacking ambition and drive for performance in almost all areas and functions. A strong appeal to all managers and employees probably might not be enough. The company is thinking about a new kind of performance management system. Does this make sense? If yes, how could it look like?

## The Future of Folk Psychology

The essays in this volume are concerned with the most recent theoretical developments in cognitive science and how they affect the everyday exploration of human actions in terms of beliefs, attitudes, memories, etc.

## Folk Psychology and the Philosophy of Mind

Within the past ten years, the discussion of the nature of folk psychology and its role in explaining behavior and thought has become central to the philosophy of mind. However, no comprehensive

account of the contemporary debate or collection of the works that make up this debate has yet been available. Intending to fill this gap, this volume begins with the crucial background for the contemporary debate and proceeds with a broad range of responses to and developments of these works -- from those who argue that "folk theory" is a misnomer to those who regard folk theory as legitimately explanatory and necessary for any adequate account of human behavior. Intended for courses in the philosophy of mind, psychology, and science, as well as anthropology and social psychology, this anthology is also of great value in courses focusing on folk models, eliminative materialism, explanation, psychological theory, and -- in particular -- intentional psychology. It is accessible to both graduate students and upper-division undergraduate students of philosophy and psychology as well as researchers. As an aid to students, a thorough discussion of the field and the articles in the anthology is provided in the introduction; as an aid to researchers, a complete bibliography is also provided.

### Folk Psychology Re-Assessed

This is a truly groundbreaking work that examines today's notions of folk psychology. Bringing together disciplines as various as cognitive science and anthropology, the authors analyze the consensual views of the subject. The contributors all maintain that current understandings of folk psychology and of the mechanisms that underlie it need to be revised, supplemented or dismissed altogether. That's why this book is essential reading for those in the field.

### The Scientific Credibility of Folk Psychology

The examination and evaluation of folk psychology and lay cognition has been carried out predominantly in two domains: personality and social psychology, and the philosophy of psychology. Yet, work in these two areas has largely proceeded independently. The assumption on which this volume is founded is that a proper comparison between scientific cognition and folk ways of thought rests on an adequate study of both science and folk psychology. With this in mind, the author provides an analysis of the intricate, and often hidden, links between these two spheres. In doing so, the book poses two related questions. First, what is the nature of folk psychology and how is it related to scientific psychology? Second, of what should the relationship between folk psychology and scientific psychology consist? In answering these two questions, the author draws extensively from research and arguments in social psychology and social cognition, cognitive science, and the philosophy of science. The interdisciplinary approach gives the book a unique perspective that will be of interest to scholars working in social psychology, cognitive science, and philosophy of science. Written in a concise and accessible style, this volume is suitable for undergraduate and graduate students as well as a general psychological audience.

### Cognitive Science and Folk Psychology

'Folk Psychology' - our everyday talk of beliefs, desires and mental events - has long been compared with the technical language of 'Cognitive Science'. Does folk psychology provide a correct account of the mental causes of our behaviour, or must our everyday terms ultimately be replaced by a language developed from computational models and neurobiology? This broad-ranging book addresses these questions, which lie at the heart of psychology and philosophy. Providing a critical overview of the key literature in the field, including the seminal work of Fodor and Churchland, the author explores the classic 'Frame Problem' and assesses the future prospects of cognitive science. The scope of the frame problem, touching on connec

### The Mind As a Scientific Object

What holds together the various fields that are supposed to constitute the general intellectual discipline that people now call cognitive science? In this book, Erneling and Johnson identify two problems with defining this discipline. First, some theorists identify the common subject matter as the mind, but scientists and philosophers have not been able to agree on any single, satisfactory answer to the question of what the mind is. Second, those who speculate about the general characteristics that belong to cognitive science tend to assume that all the particular fields falling under the rubric--psychology, linguistics, biology, and son on--are of roughly equal value in their ability to shed light on the nature of mind. This book argues that all the cognitive science disciplines are not equally able to provide answers to ontological questions about the mind, but rather that only neurophysiology and cultural psychology are suited to answer these questions. However, since the cultural account of mind has

long been ignored in favor of the neurophysiological account, Erneling and Johnson bring together contributions that focus especially on different versions of the cultural account of the mind.

### Approaches to Intentionality

Professor Lyons in this book both explores others' approaches to intentionality and expounds his own. Part I gives a critical account of the five most comprehensive and prominent contemporary approaches to intentionality. These approaches can be summarised as the instrumentalist approach, derived from Carnap and Quine and culminating in the work of Daniel Dennett; the linguistic approach, derived from the work of Chomsky and exhibited most fully in the work of Jerry Fodor; the biological approach, developed by Ruth Garrett Millikan, Colin McGinn, and others; the information-processing approach which has been given a definitive form in the work of Fred Dretske; and the functional role approach of Brian Loar. In Part II, Professor Lyons sets out a multi-level, developmental approach to intentionality. Drawing upon work in neurophysiology and psychology, the author argues that intentionality is to be found, in different forms, at the levels of brain functioning, prelinguistic consciousness, language, and at the holistic level of 'whole person performance' which is demarcated by our ordinary everyday talk about beliefs, desires, hopes, intentions, and the other 'propositional attitudes'. Written in a direct, clear, and lively style, the extended survey of contemporary debate in Part I will be invaluable to the student of philosophy of mind or cognitive science as well as to the scholars and graduate students who will find an original new theory to contend with in Part II.

### The Scope and Limits of Folk Psychology

Explaining behaviour is ubiquitous in our society. We are constantly trying to figure out what other people are doing and will do. This study is a comprehensive investigation of the main philosophical and psychological problems regarding how and why humans explain behaviour. The author answers key questions about how folk psychology develops in children, its roots in evolution, its status within society, its relation to philosophy of mind, and what sorts of folk psychological explanations should be considered rational. This assessment focuses on such theoretical positions as anti-realism, eliminativism, theory-theory, simulation theory, and modular theory in relation to folk psychology. The author argues for a radical, albeit intuitive, alternative, that folk psychology should be seen as product of the culture in which one is raised.

### Neuroadaptive Systems

Broadly defined as the science and technology of systems responding to neural processes in the brain, neuroadaptive systems (NASs) has become a rapidly developing area of study. One of the first books available in this emerging area, *Neuroadaptive Systems: Theory and Applications* synthesizes knowledge about human behavior, cognition, neural processing, and technology and how it can be used to optimize the design, development, modeling, simulation, and applications of complex neuro-based systems. Balancing coverage of theory and applications, the book examines the general aims of NASs and how neurogenomics can be applied in training applications. It includes important results and findings gathered from approximately two decades of brain computer interaction research. But more than this, the book details the underlying rationale for using NASs compared to other kinds of human-machine systems and raises questions and concerns about budding neuro-scientific areas that gives insight into the way humans may interact with neuro-technological systems in the future. With contributions from international professionals and researchers, this book presents state-of-the-art developments in neuroscience, human factors, and brain activity measurement. Packed with models, case studies, research results, and illustrations, it discusses approaches to understanding the functions of neuronal networks, and then explores challenges and applications of neuroadaptive systems. It provides tools for future development and the theory to support it.

### Folk Psychological Narratives

An argument that challenges the dominant "theory theory" and simulation theory approaches to folk psychology by claiming that our everyday understanding of intentional actions done for reasons is acquired by exposure to and engaging in specific kinds of narratives. Established wisdom in cognitive science holds that the everyday folk psychological abilities of humans—our capacity to understand intentional actions performed for reasons—are inherited from our evolutionary forebears. In *Folk Psychological Narratives*, Daniel Hutto challenges this view (held in somewhat different forms by the two dominant approaches, "theory theory" and simulation theory) and argues for the sociocultural

basis of this familiar ability. He makes a detailed case for the idea that the way we make sense of intentional actions essentially involves the construction of narratives about particular persons. Moreover he argues that children acquire this practical skill only by being exposed to and engaging in a distinctive kind of narrative practice. Hutto calls this developmental proposal the narrative practice hypothesis (NPH). Its core claim is that direct encounters with stories about persons who act for reasons (that is, folk psychological narratives) supply children with both the basic structure of folk psychology and the norm-governed possibilities for wielding it in practice. In making a strong case for the as yet underexamined idea that our understanding of reasons may be socioculturally grounded, Hutto not only advances and explicates the claims of the NPH, but he also challenges certain widely held assumptions. In this way, Folk Psychological Narratives both clears conceptual space around the dominant approaches for an alternative and offers a groundbreaking proposal.

### Agents Under Fire

In *Agents Under Fire*, Menuge defends a robust notion of agency and intentionality against eliminative and naturalistic alternatives, showing the interconnections between the philosophy of mind, theology, and Intelligent Design.

### From Folk Psychology to Cognitive Science

The average person has a rich belief system about the thoughts and motives of people. From antiquity to the beginning of this century, Stephen Stich points out, this "folk psychology" was employed in such systematic psychology as there was: "Those who theorized about the mind shared the bulk of their terminology and their conceptual apparatus with poets, critics, historians, economists, and indeed with their own grandmothers." In this book, Stich puts forth the radical thesis that the notions of believing, desiring, thinking, preferring, feeling, imagining, fearing, remembering and many other common-sense concepts that comprise the folk psychological foundations of cognitive psychology should not - and do not - play a significant role in the scientific study of the mind.

### Representation in Mind

'Representation in Mind' is the first book in the new series 'Perspectives on Cognitive Science' and includes well known contributors in the areas of philosophy of mind, psychology and cognitive science. The papers in this volume offer new ideas, fresh approaches and new criticisms of old ideas. The papers deal in new ways with fundamental questions concerning the problem of mental representation that one contributor, Robert Cummins, has described as "THE problem in philosophy of mind for some time now". The editors' introductory overview considers the problem for which mental representation has been seen as an answer, sketching an influential framework, outlining some of the issues addressed and then providing an overview of the papers. Issues include: the relation between mental representation and public, non-mental representation; misrepresentation; the role of mental representations in intelligent action; the relation between representation and consciousness; the relation between folk psychology and explanations invoking mental representations

### From Is to Ought: The Place of Normative Models in the Study of Human Thought

In the study of human thinking, two main research questions can be asked: "Descriptive Q: What is human thinking like? Normative Q: What ought human thinking be like?" For decades, these two questions have dominated the field, and the relationship between them generated many a controversy. Empirical normivist approaches regard the answers to these questions as positively correlated – in essence, human thinking is what it ought to be (although what counts as the 'ought' standard is moot). In contemporary theories of reasoning and decision making, this is often associated with a Panglossian framework, an adaptationist approach which regards human thinking as a priori rational. In contrast, prescriptive normativism sees the answers to these two questions as negatively correlated. Normative models are still relevant to human thought, but human behaviour deviates from them quite markedly (with the invited conclusion that humans are often irrational). Prescriptive normativism often results in a Meliorist agenda, which sees rationality as amenable to education. Both empirical and prescriptive normativism can be contrasted with a descriptivist framework for psychology of human thinking. Following Hume's strict divide between the 'is' and the 'ought', descriptivism regards the descriptive and normative research questions as uncorrelated, or dissociated, with only the former question suitable for psychological study of human behaviour. This basic division carries over to the relation between normative ('ought') rationality, based on conforming to normative standards; and

instrumental ('is') rationality, based on achieving one's goals. Descriptivist approaches regard the two as dissociated, whereas normativist approaches tend to see them as closely linked, with normative arguments defining and justifying instrumental rationality. This research topic brings together diverse contributions to the continuing debate. Featuring contributions from leading researchers in the field, the e-book covers a wide range of subjects, arranged by six sections: The standard picture: Normativist perspectives In defence of soft normativism Exploring normative models Descriptivist perspectives Evolutionary and ecological accounts Empirical reports With a total of some 24 articles from 55 authors, this comprehensive treatment includes theoretical analyses, meta-theoretical critiques, commentaries, and a range of empirical reports. The contents of the Research Topic should appeal to psychologists, linguists, philosophers and cognitive scientists, with research interests in a wide range of domains, from language, through reasoning, judgment and decision making, and moral judgment, to epistemology and theory of mind, philosophical logic, and meta-ethics.

### Comparative Approaches to Cognitive Science

Presents an animal-based, largely non-symbolic approach to understanding the basic mechanisms involved in adaptive intelligence. Contributions discuss and explain concepts and techniques, providing a balance of both theoretical and empirical approaches.

### Philosophy of Mind

This comprehensive and leading textbook has been revised and reworked building on the themes of the first edition. As before it covers all aspects of the nature of mind, and is ideal for anyone coming to philosophy of mind for the first time.

### Values and Educational Leadership

Studies values and their influences in educational leadership.

### Intentions and Intentionality

Highlights the roles of intention and intentionality in social cognition.

### Consciousness in Interaction

Consciousness in Interaction is an interdisciplinary collection with contributions from philosophers, psychologists, cognitive scientists, and historians of philosophy. It revolves around the idea that consciousness emerges from, and impacts on, our skilled interactions with the natural and social context. Section one discusses how phenomenal consciousness and subjective selfhood are grounded on natural and social interactions, and what role brain activity plays in these phenomena. Section two analyzes how interactions with external objects and other human beings shape our understanding of ourselves, and how consciousness changes social interaction, self-control and emotions. Section three provides historical depth to the volume, by tracing the roots of the contemporary notion of consciousness in early modern philosophy. The book offers interdisciplinary insight on a variety of key topics in consciousness research: as such, it is of particular interest for researchers from philosophy of mind, phenomenology, cognitive and social sciences, and humanities.

### How the Mind Explains Behavior

In this provocative monograph, Bertram Malle describes behavior explanations as having a dual nature—as being both cognitive and social acts—and proposes a comprehensive theoretical model that integrates the two aspects. When people try to understand puzzling human behavior, they construct behavior explanations, which are a fundamental tool of social cognition. But, Malle argues, behavior explanations exist not only in the mind; they are also overt verbal actions used for social purposes. When people explain their own behavior or the behavior of others, they are using the explanation to manage a social interaction—by offering clarification, trying to save face, or casting blame. Malle's account makes clear why these two aspects of behavior explanation exist and why they are closely linked; along the way, he illustrates the astonishingly sophisticated and subtle patterns of folk behavior explanations. Malle begins by reviewing traditional attribution theories and their simplified portrayal of behavior explanation. A more realistic portrayal, he argues, must be grounded in the nature, function, and origins of the folk theory of mind—the conceptual framework underlying people's grasp of human behavior and its connection to the mind. Malle then presents a theory of behavior explanations, focusing first on

their conceptual structure and then on their psychological construction. He applies this folk-conceptual theory to a number of questions, including the communicative functions of behavior explanations, and the differences in explanations given for self and others as well as for individuals and groups. Finally, he highlights the strengths of the folk-conceptual theory of explanation over traditional attribution theory and points to future research applications.

### Stich and His Critics

Through a collection of original essays from leading philosophical scholars, Stich and His Critics provides a thorough assessment of the key themes in the career of philosopher Stephen Stich. Provides a collection of original essays from some of the world's most distinguished philosophers Explores some of philosophy's most hotly-debated contemporary topics, including mental representation, theory of mind, nativism, moral philosophy, and naturalized epistemology

### Evolution, Rationality and Cognition

Evolutionary thinking has expanded in the last decades, spreading from its traditional stronghold – the explanation of speciation and adaptation in biology - to new domains. Fascinating pieces of work, the essays in this collection attest to the illuminating power of evolutionary thinking when applied to the understanding of the human mind. The contributors to Cognition, Evolution and Rationality use an evolutionary standpoint to approach the nature of the human mind, including both cognitive and behavioural functions. Cognitive science is by its nature an interdisciplinary subject and the essays in this collection investigate the workings of the mind through a variety of disciplines including the philosophy of science, the philosophy of mind, game theory, robotics and computational neuroanatomy. Topics covered range from general methodological issues to long-standing philosophical problems such as how rational human beings actually are. With contributions from leading experts in the areas involved, this book will be of interest across a number of fields, including philosophy, evolutionary theory and cognitive science.

### Representation Reconsidered

Publisher description

### Psychological Knowledge

Psychologists and philosophers have assumed that psychological knowledge is knowledge about, and held by, the individual mind. Psychological Knowledge challenges these views. It argues that bodies of psychological knowledge are social institutions like money or the monarchy, and that mental states are social artefacts like coins or crowns. Martin Kusch takes on arguments of alternative proposals, shows what is wrong with them, and demonstrates how his own social-philosophical approach constitutes an advance. We see that exists a substantial natural amount of philosophical theorising, a body of work that tries to determine the nature and structure of folk psychology. An introduction to the workings of constructivism, Psychological Knowledge is an insightful introduction to the history of psychology and the recent philosophy of mind.

### A Formal Theory of Commonsense Psychology

This book formalizes commonsense knowledge to enable artificial intelligence to understand and engage with the mental lives of people.

### Brainchildren

A new collection of wide-ranging essays from one of cognitive science's most distinguished figures. Minds are complex artifacts, partly biological and partly social; only a unified, multidisciplinary approach will yield a realistic theory of how they came into existence and how they work. One of the foremost workers in this multidisciplinary field is Daniel Dennett. This book brings together his essays on the philosophy of mind, artificial intelligence, and cognitive ethology that appeared in inaccessible journals from 1984 to 1996. Highlights include "Can Machines Think?," "The Unimagined Preposterousness of Zombies," "Artificial Life as Philosophy," and "Animal Consciousness: What Matters and Why." Collected in a single volume, the essays are now available to a wider audience.

### Cognitive Social Psychology

A comprehensive overview of the mechanisms involved in how cognitive processes determine thought and behavior toward the social world, *Cognitive Social Psychology*: \*examines cognition as a motivated process wherein cognition and motivation are seen as intertwined; \* reviews the latest research on stereotyping, prejudice, and the ability to control these phenomena--invaluable information to managers who need to prevent against bias in the workplace; and \*provides a current analysis of classic problems/issues in social psychology, such as cognitive dissonance, the fundamental attribution error, social identity, stereotyping, social comparison, heuristic processing, the self-concept, assimilation and contrast effects, and goal pursuit. Intended for psychology and management students, as well as social, cognitive, and industrial/organizational psychologists in both academic and applied settings. This new book is also an ideal text for courses in social cognition due to its cohesive structure.

### The Cognitive Basis of Social Interaction Across the Lifespan

Explores the cognitive mechanisms underlying the development of human social interactive abilities across the lifespan, in healthy and atypical development. Combines traditionally separate bodies of research into one coherent volume, following the trajectory of communication over the entire lifespan from infancy to old age. Crosses multiple disciplines, drawing together expertise from researchers in psychology, neuroscience, psychiatry, linguistics, and philosophy. Brings together key methodologies and debates in a vibrant and fast-growing field. Written in an accessible style and suited to a wide range of readers, including academics and students of cognitive, developmental, and social psychology, related sciences and social sciences, as well as practitioners working in the fields of social care, mental health, and education

### The MIT Encyclopedia of the Cognitive Sciences (MITECS)

Since the 1970s the cognitive sciences have offered multidisciplinary ways of understanding the mind and cognition. The MIT Encyclopedia of the Cognitive Sciences (MITECS) is a landmark, comprehensive reference work that represents the methodological and theoretical diversity of this changing field. At the core of the encyclopedia are 471 concise entries, from Acquisition and Adaptationism to Wundt and X-bar Theory. Each article, written by a leading researcher in the field, provides an accessible introduction to an important concept in the cognitive sciences, as well as references or further readings. Six extended essays, which collectively serve as a roadmap to the articles, provide overviews of each of six major areas of cognitive science: Philosophy; Psychology; Neurosciences; Computational Intelligence; Linguistics and Language; and Culture, Cognition, and Evolution. For both students and researchers, MITECS will be an indispensable guide to the current state of the cognitive sciences.

### Passions and Projections

Best known to the general public for his attempts to make philosophy accessible to those with little or no formal training, Simon Blackburn's reputation in academic circles is based on a lifetime pursuit of a projectivist and anti-realist research programme in the spirit of the great David Hume. This volume of critical essays by some of the most influential philosophers working today documents the whole range and influence of Blackburn's work, and poses some novel challenges for him.

### Gray Matters: Introduction to the Philosophy of Mind

Gray Matters is a thorough examination of the main topics in recent philosophy of mind. It aims at surveying a broad range of issues, not all of which can be subsumed under one position or one philosopher's theory. In this way, the authors avoid neglecting interesting issues out of allegiance to a given theory of mind.

### Exchanges between Literature and Science from the 1800s to the 2000s

This collection of essays responds to the intense interest that the relations between the discourses of literature (and other cultural practices) and those of science have obtained throughout various fields of study. Spanning a period between the mid-nineteenth century and the twenty-first century, the work collected here is firmly focused on the cultural significance of scientific discoveries and practices, and especially on the manifold representations of science and scientists in literature and the arts. Its four sections develop from an initial moment of dwindling indefiniteness of borders between literature and the sciences to the historical perception of an increasing divide between "the two cultures," to use C.P.

Snow's influential expression, as well as calls for a form of convergence or "consilience" in Edward Wilson's words. The final section turns to the medical sciences, a porous scientific discipline in relation to the humanities, which suggests that consilience can already be found partially in specific areas. As such, this collection contributes towards critically extending that integration through the discussion of key literary representations of science, its promises, and its problems.

#### Do Apes Read Minds?

Andrews argues for a pluralistic folk psychology that employs different kinds of practices and different kinds of cognitive tools (including personality trait attribution, stereotype activation, inductive reasoning about past behavior, and generalization from self) that are involved in our folk psychological practices.

#### Advances in Experimental Social Psychology

Advances in Experimental Social Psychology continues to be one of the most sought after and most often cited series in this field. Containing contributions of major empirical and theoretical interest, this series represents the best and the brightest in new research, theory, and practice in social psychology. This serial is part of the Social Sciences package on ScienceDirect. Visit [info.sciencedirect.com](http://info.sciencedirect.com) for more information. Advances Experimental Social Psychology is available online on ScienceDirect - full-text online of volume 32 onward. Elsevier book series on ScienceDirect gives multiple users throughout an institution simultaneous online access to an important complement to primary research. Digital delivery ensures users reliable, 24-hour access to the latest peer-reviewed content. The Elsevier book series are compiled and written by the most highly regarded authors in their fields and are selected from across the globe using Elsevier's extensive researcher network. #### Philosophy of Psychology: Causality and Psychological Subject

Contemporary philosophy of science analyzes psychology as a science with special features, because this discipline includes some specific philosophical problems – descriptive and normative, structural and dynamic. Some of these are particularly relevant both theoretically (casual explanation) and practically (the configuration of the psychological subject and its relations with psychiatry). Two central aspects in this book are the role of causality, especially conceived as intervention or manipulation, and the characterization of the psychological subject. This requires a clarification of scientific explanations in terms of causality in psychology, because characterizations of causality are quite different in epistemological and ontological terms. One of the most influential views is James Woodward's approach to causality as intervention, which entails an analysis of its characteristics, new elements and limits. This means taking into account the structural and dynamic aspects included in causal cognition and psychological explanations. Psychology seen as special science also requires us to consider the scientific status of psychology and the psychological subject, which leads to limits of naturalism in psychology.

#### A Conceptual History of Psychology

A penetrating analysis of the fundamental conceptual continuities and discontinuities that inform the history of psychology.

#### Open Minds

A novel proposal that the cognitive architecture for volition and cognition arises from particular kinds of social interaction and communication. In Open Minds, Wolfgang Prinz offers the novel claim that agency and intentionality are first perceived and understood in others, and that it is only through practices and discourses of social mirroring that individuals come to apply these features to themselves and to shape their architectures for volition and cognition accordingly. Developing a (social science) constructive approach within a (cognitive science) representational framework, Prinz argues that the architectures for agency (volition) and intentionality (cognition) arise from particular kinds of social interaction and communication. Rather than working as closed, individual systems, our minds operate in ways that are fundamentally open to other minds. Prinz describes mirror systems and mirror games, particular

kinds of representational mechanisms and social games that provide tools for aligning closed individual minds with other minds. He maps the formation of an architecture for volition, addressing issues of agency and intention-based top-down control, then outlines the ways the same basic ideas can be applied to an architecture for cognition, helping to solve basic issues of subjectivity and intentionality. Addressing the reality and efficacy of such social artifacts as autonomy and free will, Prinz contends that our beliefs about minds are not just beliefs about their workings but powerful tools for making them work as we believe. It is through our beliefs that our minds work in a particular way that we actually make them work in that way.

### Law and the Brain

The past 20 years have seen unparalleled advances in neurobiology, with findings from neuroscience being used to shed light on a range of human activities - many historically the province of those in the humanities and social sciences - aesthetics, emotion, consciousness, music. Applying this new knowledge to law seems a natural development - the making, considering, and enforcing of law of course rests on mental processes. However, where some of those activities can be studied with a certain amount of academic detachment, what we discover about the brain has considerable implications for how we consider and judge those who follow or indeed flout the law - with inevitable social and political consequences. There are real issues that the legal system will face as neurobiological studies continue to relentlessly probe the human mind - the motives for our actions, our decision making processes, and such issues as free will and responsibility. This volume represents a first serious attempt to address questions of law as reflecting brain activity, emphasizing that it is the organization and functioning of the brain that determines how we enact and obey laws. It applies the most recent developments in brain science to debates over criminal responsibility, cooperation and punishment, deception, moral and legal judgment, property, evolutionary psychology, law and economics, and decision-making by judges and juries. Written and edited by leading specialists from a range of disciplines, the book presents a groundbreaking and challenging new look at human behaviour.

### Models of the Self

A long history of inquiry about human nature and the self stretches from the ancient tradition of Socratic self-knowledge in the context of ethical life to contemporary discussions of brain function in cognitive science. It begins with a conflict among the ancients. On one view, which comes to be represented most clearly by Aristotle, the issue is settled in terms of a composite and very complex human nature. Who I am is closely tied to my embodied existence. The other view, found as early as the Pythagoreans, and developed in the writings of Plato, Augustine and Descartes, held that genuine humanness is not the result of an integration of 'lower' functions, but a purification of those functions in favour of a liberating spirituality. The animal elements are excluded from the human essence. The modern debate on the problem of the self, although owing much to the insights of Locke and Hume, can still be situated within the context of the two schools of ancient thought, and this has led many to despair over the lack of apparent progress in this problem. Today, of course, we often tend to look to science rather than philosophy to develop our understanding of a wide range of fundamental issues. To what extent is the problem of the self a scientific issue? Can insights from the study of neuropsychology and cognitive development in infancy provide a new perspective? Can the study of schizophrenia and dissociative identity disorders tell us anything about the nature of human self-consciousness? Many would answer yes to the above questions, but then is it not also the case that the study of exceptional 'self-actualised' human experience is equally relevant? And can the phenomenological tradition, dedicated to the systematic study of human experience, and contemporary analytic approaches in philosophy help us out of some of the impasses that have bedevilled the empiricist tradition? **MODELS OF THE SELF** includes all these perspectives in an attempt to cast light on one of the most intractable problems in science and the humanities.

### The Real World of Technology

In this expanded edition of her bestselling 1989 CBC Massey Lectures, renowned scientist and humanitarian Ursula M. Franklin examines the impact of technology upon our lives and addresses the

extraordinary changes since *The Real World of Technology* was first published. In four new chapters, Franklin tackles contentious issues, such as the dilution of privacy and intellectual property rights, the impact of the current technology on government and governance, the shift from consumer capitalism to investment capitalism, and the influence of the Internet upon the craft of writing.

### The Real World of Technology

'A towering intellect ... powerful, always provocative.' *Guardian* 'A superb polemicist who combines fluency of language with a formidable intellect.' *Observer* 'Must be read by everyone concerned with public affairs.' *Edward Said* *Necessary Illusions* explodes the myth of an independent media, intent on uncovering the truth at any cost. Noam Chomsky demonstrates that, in practice, the media in the developed world serve the interests of state and corporate power - despite protestations to the contrary. While individual journalists strive to abide by high standards of professionalism and integrity in their work, their paymasters - the media corporations - ultimately decide what we view, hear and read. Rigorously documented, *Necessary Illusions* continues Chomsky's celebrated tradition of profoundly insightful indictments of US foreign and domestic institutions and tears away the veneer of propaganda that portrays the media as the servant of free speech and democracy.

### The Real World of Technology

Distinguished cyberneticist Stafford Beer states the case for a new science of systems theory and cybernetics. His essays examine such issues as *The Real Threat to All We Hold Most Dear*, *The Discarded Tools of Modern Man*, *A Liberty Machine in Prototype*, *Science in the Service of Man*, *The Future That Can Be Demanded Now*, *The Free Man in a Cybernetic World*. *Designing Freedom* ponders the possibilities of liberty in a cybernetic world.

### Necessary Illusions

Digital technologies have given rise to a new machine-based civilization that is increasingly linked to a growing number of social and political maladies. Accountability is weak and insecurity is endemic, creating disturbing opportunities for exploitation. With COVID-19 only heightening the demand for social media and amplifying negative externalities, it is all the more urgent for us to comprehensively address the intertwined pathologies of social media and surveillance capitalism. This starts with the device in our hand. It's time for us to push RESET.

### Designing Freedom

A real-time five-hour story set in an airport cocktail lounge during a global disaster. Five disparate people are trapped inside: Karen, a single mother waiting for her online date; Rick, the down-on-his-luck airport lounge bartender; Luke, a pastor on the run; Rachel, a cool Hitchcock blonde incapable of true human contact; and finally a mysterious voice known as Player One. Slowly, each reveals the truth about themselves while the world as they know it comes to an end. In the tradition of Kurt Vonnegut and J.G. Ballard, Coupland explores the modern crises of time, human identity, society, religion and the afterlife. The book asks as many questions as it answers and readers will leave the story with no doubt that we are in a new phase of existence as a species - and that there is no turning back.

### Reset

A historical study of Chile's twin experiments with cybernetics and socialism, and what they tell us about the relationship of technology and politics. In *Cybernetic Revolutionaries*, Eden Medina tells the history of two intersecting utopian visions, one political and one technological. The first was Chile's experiment with peaceful socialist change under Salvador Allende; the second was the simultaneous attempt to build a computer system that would manage Chile's economy. Neither vision was fully realized—Allende's government ended with a violent military coup; the system, known as Project Cybersyn, was never completely implemented—but they hold lessons for today about the relationship between technology and politics. Drawing on extensive archival material and interviews, Medina examines the cybernetic system envisioned by the Chilean government—which was to feature holistic system design, decentralized management, human-computer interaction, a national telex network, near real-time control of the growing industrial sector, and modeling the behavior of dynamic systems. She also describes, and documents with photographs, the network's *Star Trek*-like operations room, which featured swivel chairs with armrest control panels, a wall of screens displaying data, and flashing

red lights to indicate economic emergencies. Studying project Cybersyn today helps us understand not only the technological ambitions of a government in the midst of political change but also the limitations of the Chilean revolution. This history further shows how human attempts to combine the political and the technological with the goal of creating a more just society can open new technological, intellectual, and political possibilities. Technologies, Medina writes, are historical texts; when we read them we are reading history.

### Player One

History is a construction. What happens when we bring stories consigned to the margins up to the light? How does that complicate our certainties about who we are, as individuals, as nations, as human beings? As in her fiction, the essays in *Out of the Sun* demonstrate Esi Edugyan's commitment to seeking out the stories of Black lives that history has failed to record. In five wide-ranging essays, written with the rise of the Black Lives Matter movement in the background, Edugyan reflects on her own identity and experiences. She delves into the history of Western Art and the truths about Black lives that it fails to reveal, and the ways contemporary Black artists are reclaiming and reimagining those lives. She explores and celebrates the legacy of Afrofuturism, the complex and problematic practice of racial passing, the place of ghosts and haunting in the imagination, and the fascinating relationship between Africa and Asia dating back to the 6th Century. With calm, piercing intelligence, Edugyan asks difficult questions about how we reckon with the past and imagine the future.

### Cybernetic Revolutionaries

Winner of the 2003 Trillium Book Award "Stories are wondrous things," award-winning author and scholar Thomas King declares in his 2003 CBC Massey Lectures. "And they are dangerous." Beginning with a traditional Native oral story, King weaves his way through literature and history, religion and politics, popular culture and social protest, gracefully elucidating North America's relationship with its Native peoples. Native culture has deep ties to storytelling, and yet no other North American culture has been the subject of more erroneous stories. The Indian of fact, as King says, bears little resemblance to the literary Indian, the dying Indian, the construct so powerfully and often destructively projected by White North America. With keen perception and wit, King illustrates that stories are the key to, and only hope for, human understanding. He compels us to listen well.

### Out of The Sun

Narrative has been central to human life for millennia, and the twentieth century has been preeminently the age of the story. Mass culture and mass leisure have enabled us to spend far more time absorbing stories, real and imaginary, than any of our ancestors. Whether or not this has been to our benefit is one of the questions raised by journalist and 1999 CBC Massey lecturer Robert Fulford. Narrative, Fulford points out, is how we explain, how we teach, how we entertain ourselves - often all at once. It is the bundle in which we wrap truth, hope, and dread. It is crucial to civilization. Fulford writes engagingly and energetically about narrative history, narrative in news coverage, the rise of electronic narrative, and narrative as it flourishes in the form of gossip, "the folk-art version of literature," revealing to us the mystery, power, and importance of story in all our lives.

### The Truth About Stories

Everywhere we hear talk of decline, of a world that was better once, maybe fifty years ago, maybe centuries ago, but certainly before modernity drew us along its dubious path. While some lament the slide of Western culture into relativism and nihilism and others celebrate the trend as a liberating sort of progress, Charles Taylor calls on us to face the moral and political crises of our time, and to make the most of modernity's challenges. "The great merit of Taylor's brief, non-technical, powerful book...is the vigor with which he restates the point which Hegel (and later Dewey) urged against Rousseau and Kant: that we are only individuals in so far as we are social... Being authentic, being faithful to ourselves, is being faithful to something which was produced in collaboration with a lot of other people... The core of Taylor's argument is a vigorous and entirely successful criticism of two intertwined bad ideas: that you are wonderful just because you are you, and that 'respect for difference' requires you to respect every human being, and every human culture--no matter how vicious or stupid." --Richard Rorty, London Review of Books

### The Triumph of Narrative

"Attention Equals Life examines why a quest to pay attention to daily life has increasingly become a central feature of both contemporary American poetry and the wider culture of which it is a part" --

### The Ethics of Authenticity

In this intellectual tour de force John Ralston Saul argues that our society is only superficially based on the individual and democracy, and the West now toils unconsciously in the grip of a stifling "corporatist" structure that serves the needs of business managers and technocrats as it promotes the segmentation of society into competing interest groups and ethnic blocks.

### Attention Equals Life

"The most fundamental difference between 'developing' and 'developed' societies is technology, in a broad yet specific sense"; so states the author of this important study, *Liberation and Technology*: Development possibilities in pursuing technological autonomy. The ways in which technology is developed, institutionalized, animated and celebrated, form the core of 'development' (human, economic, environmental, etc.) and ultimately civilization itself. But 'techno-spheres' are not only technical. They are also social, political, and ideological. For societies and countries that have long been kept from realizing their own prosperity and dignity, development is also liberation. The main treatise of this book is that each developing society ought to seek to achieve technological autonomy in its quest for positive transformations and prosperity for its people. Technological autonomy is about attaining a high level of self-determination in planning and managing technological affairs. Attaining endogenous capacity to guide and execute decisions on production and innovation; creating and transferring key technological products and services; steering relevant foreign and local investment as well as trade; setting own priorities of development free from external manipulation; are goals that must be central to such planning efforts. With evidence and argument, and in plain language, this book suggests a novel way of thinking about development, through envisioning and building better techno-social systems. For these reasons this book is a welcome addition to the body of ideas informing practitioners and theorists in the field of development—political leaders, economists, sociologists, engineers, technologists, scientists, scholars, planners and activists who are involved in relevant development processes and liberation struggles.

### The Unconscious Civilization

The decline of formal religious systems has left a moral and emotional emptiness in Western culture. George Steiner, internationally renowned thinker and scholar, pursues this and examines the alternative "mythologies" of Marxism, Freudian psychology, Lévi-Straussian anthropology, and fads of irrationality.

### Liberation and Technology

From the author of *INTO THE SILENCE*, winner of the Samuel Johnson Prize for Non-Fiction In 1941, Richard Evans Schultes took a leave of absence from Harvard University and disappeared into the Northern Amazon of Colombia. The world's leading authority on the hallucinogens and medicinal plants of the region, he returned after twelve years of travelling through South America in a dug-out canoe, mapping uncharted rivers, living among local tribes and documenting the knowledge of shamans. Thirty years later, his student Wade Davis landed in Bogota to follow in his mentor's footsteps – so creating an epic tale of undaunted adventure, a compelling work of natural history and a testament to the spirit of scientific exploration.

### Nostalgia for the Absolute

Every culture is a unique answer to a fundamental question: What does it mean to be human and alive? In *The Wayfinders*, renowned anthropologist, winner of the prestigious Samuel Johnson Prize, and National Geographic Explorer-in-Residence Wade Davis leads us on a thrilling journey to celebrate the wisdom of the world's indigenous cultures. In Polynesia we set sail with navigators whose ancestors settled the Pacific ten centuries before Christ. In the Amazon we meet the descendants of a true lost civilization, the Peoples of the Anaconda. In the Andes we discover that the earth really is alive, while in Australia we experience Dreamtime, the all-embracing philosophy of the first humans to walk out of Africa. We then travel to Nepal, where we encounter a wisdom hero, a Bodhisattva, who emerges from forty-five years of Buddhist retreat and solitude. And finally we settle in Borneo, where the last

rainforest nomads struggle to survive. Understanding the lessons of this journey will be our mission for the next century. For at risk is the human legacy -- a vast archive of knowledge and expertise, a catalogue of the imagination. Rediscovering a new appreciation for the diversity of the human spirit, as expressed by culture, is among the central challenges of our time.

### One River

'A fascinating, freewheeling examination of ideas of debt, balance and revenge in history, society and literature - Atwood has again struck upon our most current anxieties' The Times 'A stimulating, learned, and stylish read from an eminent author writing from a heartfelt perspective ... very provocative' Conrad Black In this wide-ranging history of debt Margaret Atwood investigates its many meanings through the ages, from ancient times to the current global financial meltdown. Many of us wonder: how could we have let such a collapse happen? How old or inevitable is this human pattern of debt? From the earliest days of finance in ancient Babylon to the modern machinations of the World Bank, the acclaimed author of *The Handmaid's Tale* turns her incisive eye onto one of humanity's oldest ideas. Imaginative, topical and insightful, *Payback* urges us to reconsider our ideas of ownership and debt - before it is too late.

### The Wayfinders

*The Art of Living for A Technological Age* sketches the crisis of our late modern age, where persons are enamored by the promises of progress and disciplined to form by the power of technology--the ontology of our age. Yet, it also offers a response, attending to those performative activities, educative and transformative social practices that might allow us to live humanly and bear witness to human being (becoming) for a technological age. As such, it is an exemplary example of the goals and outcomes of the *Dispatches* series, the individual volumes of which draw on diverse theological resources in order to offer urgent responses to contemporary crises. Authors in the series introduce succinct and provocative arguments intended to provoke dialogue and exchange of ideas, while setting in relief the implications of theology for political and moral life.

### Payback

Feminist, educator, Quaker, and physicist, Ursula Franklin has long been considered one of Canada's foremost advocates and practitioners of pacifism. "The Ursula Franklin Reader: Pacifism as a Map" is a comprehensive collection of her work, and demonstrates subtle, yet critical, linkages across a range of subjects: the pursuit of peace and social justice, theology, feminism, environmental protection, education, government, and citizen activism. This thoughtful collection, drawn from more than four decades of research and teaching, brings readers into an intimate discussion with Franklin, and makes a passionate case for how to build a society centered around peace.

### The Art of Living for A Technological Age

We live in an age dominated by the cult of efficiency. Efficiency in the raging debate about public goods is often used as a code word to advance political agendas. When it is used correctly, efficiency is important: it must always be part of the conversation when resources are scarce and citizens and governments have important choices to make among competing priorities. Even when the language of efficiency is used carefully, that language alone is not enough. Unilingualism will not do. We need to go beyond the cult of efficiency to talk about accountability. Much of the democratic debate of the next decade will turn on how accountability becomes part of our public conversation and whether it is imposed or negotiated. Janice Gross Stein draws on public education and universal health care, locally and globally, as flashpoints in the debate about their efficiency. She argues that what will define the quality of education from Ontario to India and the quality of health care from China to Alberta is whether citizens and governments can negotiate new standards of accountability. The cult of efficiency will not take us far enough.

### The Ursula Franklin Reader

World-renowned physicist Neil Turok delivers this year's Massey Lectures - a visionary look at the way the human mind can shape the future. A groundbreaking book about the future of science - and the directions in which it will take us and our world.

### The Cult of Efficiency

Winter takes us on an intimate tour of the artists, poets, composers, writers, explorers, scientists and thinkers who helped shape a new and modern idea of winter. We learn how literature heralds the arrival of the middle class; how snow science leads to existential questions of God and our place in the world; how the race to the poles marks the human drive to imprint meaning on a blank space. Offering a kaleidoscopic take on the season, Winter is a homage to an idea of a season and a journey through the modern imagination.

#### The Universe Within

Dr Tainter describes nearly two dozen cases of collapse and reviews more than 2000 years of explanations. He then develops a new and far-reaching theory.

#### Winter

Two theoretical physicists offer a bold new study of cosmic history that posits that the so-called Big Bang was simply part of an infinite cycle of colossal collisions between our known universe and a parallel world, drawing on ground-breaking developments in astronomy, particle physics, and superstring theory to illuminate their Cyclic Universe theory. Reprint. 25,000 first printing.

#### The Collapse of Complex Societies

The groundbreaking and multiple award-winning national bestseller work about systemic racism, education, the failure of the policing and justice systems, and Indigenous rights by Tanya Talaga. Over the span of eleven years, seven Indigenous high school students died in Thunder Bay, Ontario. They were hundreds of kilometres away from their families, forced to leave home because there was no adequate high school on their reserves. Five were found dead in the rivers surrounding Lake Superior, below a sacred Indigenous site. Using a sweeping narrative focusing on the lives of the students, award-winning author Tanya Talaga delves into the history of this northern city that has come to manifest Canada's long struggle with human rights violations against Indigenous communities.

#### Endless Universe

Finalist, CCBC Marilyn Baillie Picture Book Award Finalist, Janet Savage Blachford Prize for Children's and Young Adult Literature Sydney and his friends gather outside to play, transforming one by one to climb, leap, lumber and soar into a shared jungle of their imagination. Hanging upside down in a tree, Sydney imagines he is a sleepy, sun-bathing sloth. And that's where Sami finds him. Sami thinks sloths are too slow, so she scampers up the tree and becomes a spider monkey. "Fast is fun!" she chatters. "Fast is best!" And that's where Edward finds them... One after another, the neighborhood kids wander by and slip into a shared imaginative world where leaves and giant flowers unfurl, playing, laughing, teasing and bickering, until Edward the elephant fills up his trunk and—WHOOSH!—sends the children "galloping home like a herd of small wet animals." As always, Marie-Louise Gay's writing and artwork are wonderfully pitched to young readers, capturing the effortless way that children travel back and forth between the worlds of real life and make believe. With its sun-dappled watercolors, depiction of time spent outdoors with friends, and quiet, wistful ending, I'm Not Sydney perfectly illustrates the slow-moving magic of a childhood summer. #### Seven Fallen Feathers

Doing Ethics in a Pluralistic World is an apt title for this collection of essays in honour of Roger C. Hutchinson who, over many decades, has encouraged and participated in shaping a Canadian contextual social ethics. His abiding interest in social ethics and in religious engagement with public issues is reflected in his life's work — seeking the consensus and self-knowledge required to achieve cooperation in the search for a just, participatory, and sustainable society. One of Roger Hutchinson's many notable accomplishments is his development of a method of dialogue for ethical clarification in situations of diversity. Some of the essays collected here apply this method to specific issues, while others discuss how religious persons and organizations can and do co-operate in a pluralistic world to achieve social and ecological well-being. All essays are of keen interest to those concerned with the role and function of ethics at the matrix of religious conviction and social transformation. For nearly

three decades Roger Hutchinson has been based at Victoria University in Toronto, first in religious studies, then at Emmanuel College, where he completed his teaching career as professor of church and society while serving as principal from 1996 to 2001.

### I'm Not Sydney!

After World War II, two concentration camp survivors begin a battle for love in this heartwarming, historical novel based on a true story. It's 1945, and Miklós is looking for a wife. The fact that he has six months left to live doesn't discourage him—he isn't one to let small problems like that stand in the way, especially not after he's survived a concentration camp. Currently marooned in an all-male sanatorium in Sweden, and desperate to get out, he acquires the names of the 117 Hungarian women also recovering in Sweden and writes each of them a letter in his beautiful cursive hand. Luckily for him, Lili decides to write back... Drawn from the real-life letters of Péter Gárdos's parents, and reminiscent of the film *Life Is Beautiful*, *Fever at Dawn* is a vibrant, ribald, and unforgettable tale, showing the death-defying power of the human will to live and to love. "Fever at Dawn has the sweetness of *The Rosie Project* and the pathos of *The Fault in Our Stars*...A book to fall in love with."—*The Herald Sun* "At once heartrending and lighthearted, this romance covers enormous ground in love and war, joy and tragedy." — Shelf Awareness, starred review "A riveting and high-spirited journey from the brink of death toward life, [*Fever at Dawn*] asserts the power of love."—Julie Orringer, author of *The Invisible Bridge*

### Doing Ethics in a Pluralistic World

A treasury of Brazilian folktales is presented in the authentic voice of an author who grew up in the rain forest and includes stories identified as most representative of Amazonian culture, in a volume complemented by descriptions of indigenous populations and a glossary of animal and plant profiles.

### Fever at Dawn

Governor General's Award Winner Tenth Anniversary Edition, with a new preface Our society, John Ralston Saul argues in his 1995 CBC Massey Lectures, is only superficially based on the individual and democracy. Increasingly it is conformist and corporatist, a society in which legitimacy lies with specialist or interest groups and decisions are made through constant negotiations between these groups. The paradox of our situation is that knowledge has not made us conscious. Instead, we have sought refuge in a world of illusion where language is cut off from reality. Reconnecting language to reality, clarifying what we mean by individualism and democracy, making these realities central to the citizen's life, identifying ideologies in order to control them, these are among the first elements of equilibrium which Saul proposes in these lectures.

### Amazonia

From a cutting-edge cultural commentator, a bold and brilliant challenge to cherished notions of the internet as the great leveler of our age.

### The Unconscious Civilization

Born in Leicester, England, and raised in a working-class family, Richardson emigrated to northern Manitoba in 1911. She was influential in the women's and peace movements in both countries. Devoutly religious, she challenged orthodoxy and worked outside the mainstream churches for peace and social justice. She cofounded one of the earliest suffrage groups in Manitoba and was a key activist in peace movements during the Boer War and World War I. She also served as an information centre for international antiwar news and ran an internationally focused women's peace crusade in World War I from her Manitoba farmhouse via the post and newspaper columns. Richardson was also a gifted writer and poet. She wrote on a variety of women's movement issues for British and Canadian newspapers and magazines, including *Woman's Century*, the magazine of the National Council of Women of Canada. Her outcries against war, her indictment of militarism, and her call for women and men to stand together for justice were powerful messages that still have resonance today. Tragically, poor health, both mental and physical, interfered with Richardson's work and prevented her from achieving the recognition attained by feminist contemporaries such as Nellie McClung.

### The People's Platform: Taking Back Power and Culture in the Digital Age

Course by course, Margaret Visser examines an ordinary meal—corn, salt, butter, chicken, rice, lettuce, olive oil, lemon juice and ice cream—to show the unexpected history, mythology and taboos behind what we eat.

#### Reconstructed World

Design and technology education is now an established field of study in primary schools and in many early childhood centres. Authors Marilyn Flear and Beverley Jane offer the definitive text on this curriculum area. *Design and Technology for Children 3e* is a comprehensive and innovative account of teaching and research in design and technology education. It gives pre-service and in-service teachers opportunities to reflect upon and further develop their understanding of technology and technological knowledge, and to consider several different approaches in a practical and interactive way. The third edition has been written to reflect current research and practice in design and technology education for Australian children and pre-service teachers.

#### Much Depends On Dinner

2016 Governor General's Literary Award Finalist 2017 Kobo Emerging Writer Prize Winner 2017 Joe Shuster Award Nominee Teva Harrison was diagnosed with metastatic breast cancer at the age of 37. In this brilliant and inspiring graphic memoir, she documents through comic illustration and short personal essays what it means to live with the disease. She confronts with heartbreaking honesty the crises of identity that cancer brings: a lifelong vegetarian, Teva agrees to use experimental drugs that have been tested on animals. She struggles to reconcile her long-term goals with an uncertain future, balancing the innate sadness of cancer with everyday acts of hope and wonder. She also examines those quiet moments of helplessness and loving with her husband, her family, and her friends, while they all adjust to the new normal. Ultimately, *In-Between Days* is redemptive and uplifting, reminding each one of us of how beautiful life is, and what a gift.

#### Design and Technology for Children

This volume of essays from leading British, North American and Australasian contributors looks at the issues of the convergence of distance and conventional education. The term 'convergence' refers to the breaking down of barriers between open and distance learning and conventional institutions, and the creation of more and more institutions working across a range of modes. Such convergence has been driven by a number of factors, including the new technologies for teaching and learning, the impact of lifelong learning policies, the entry of larger than ever numbers of adult part-time students into tertiary education, and the demands of both employers and individuals for professional and work-related education throughout their working lives. The fourteen chapters engage critically with a range of aspects of convergence, including: \* how well is open and distance learning carried out by conventional institutions for which it may continue for a lengthy period to be seen as of secondary importance? \* to what extent will open and distance learning be more effectively carried out by conventional institutions able to offer a variety of modes to a wide range of learners? \* how well will the variety of learners be served by systems that are converging? \* what are the managerial issues at institutional level where converging systems are being developed?

#### In-Between Days

Two teenaged outsiders establish an uneasy truce in this visually arresting, one-of-a-kind collage-style novel.

#### The Convergence of Distance and Conventional Education

Winner of the 2016 Governor General's Literary Award for Young People's Literature — *Text* In the town of Leamington, Ontario, a seventeen-year-old boy is suddenly stricken by a schizophrenic episode and wakes up in hospital. The boy's name is Calvin, and he is plagued by hallucinations. As the hallucinations persist, Calvin comes to believe that the answer lies in performing one grand and incredible gesture. And so he decides to walk across Lake Erie. In January. The temperatures have been below freezing for weeks. The ice should hold... The lake, it turns out, is more marvelous, and more treacherous, than Calvin had ever imagined — populated by abandoned cars (joy ride!), ice-fishing eccentrics, psychokiller snow beings, and a not-so-mythical sea witch named Jenny Greenteeth. Not to mention the man-eating tiger that looms just out of his sight lines as he treks. But the biggest surprise

of all is that Calvin finds himself accompanied by Susie, the girl of his dreams. Or is it his dreams that have conjured up Susie? Part romance, part adventure story, part quest novel, Martine Leavitt brings her inimitable gentle wit, humor and compassion to a story about a teenaged boy struggling to gain control of his own mind and destiny.
