The Foundations of Social Research

Choosing a research method can be bewildering. How can you be sure which methodology is appropriate, or whether your chosen combination of methods is consistent with the theoretical perspective you want to take? This book links methodology and theory with great clarity and precision, showing students and researchers how to navigate the maze of conflicting terminology. The major epistemological stances and theoretical perspectives that colour and shape current social research are detailed and the author reveals the philosophical origins of these schools of inquiry and shows how various disciplines contribute to the practice of social research as it is known today.

The Foundations of Social Research is essential reading for new and experienced researchers, students and professionals, in the social and health sciences.' .a wonderful piece of writing, expounding the philosophical and theoretical considerations of the research process for social researchers in a clear, fair minded and friendly way.'Clive Seale, Department of Sociology, Goldsmiths College, University of London

Foundations for Research

Designed for introductory research courses in the professional fields and social sciences, this text acquaints students and beginning researchers with a broad view of research methodologies and an understanding of the assumptions that inform each of these approaches. More experienced researchers will also find the book useful in acquainting them with methodologies and theoretical frameworks that are new to them. The text is distinguished by its avoidance of using the discreet categories

of qualitative and quantitative methods to organize the chapters. While some chapter authors rely more on one or the other, many employ multiple methodologies to investigate particular problems and questions. Further, the book is not organized into single, contradictory positivist-interpretivist categories of research; chapter authors often situate methodologies within a variety of, and sometimes multiple, theoretical positions, particularly as these approaches are shaped by the historical context of social science research. Focus points in *Foundations for Research: Methods of Inquiry in Education and the Social Sciences*: *research ethics. *intertwined relationship of theory and research design. *systematic examination of ways to design and implement high-quality, trustworthy research across varying research designs. *specific methods for implementing research within various frameworks. *pedagogical strategies.

The Politics of Social Research

Is social research political? Should it be political? What are the implications of the politicization of social research? Recent years have seen a growing range of challenges to the idea that research should be governed by the principle of value neutrality. Critical, feminist, antiracist and postmodernist analyses have argued that social research is intrinsically political. In this stimulating and often controversial book, Martyn Hammersley weighs the arguments offered in support of these positions. He considers the fundamental issues that the debate raises about the nature of social research, its political dimensions and its contemporary relevance. At the same time he provides a robust defence of value neutrality as a constitutive principle of social research, and makes a reassessment of the role of research in modern societies. Praise for *The Politics of Social Research* For anyone interested in the nature of social research, who has enough grasp of the issues to access the text, this book is a must' - "British Journal of Educational Psychology" "All in all Hammersley has produced a text which provides us with much to think about. As I have said, certain chapters will, no doubt, attract considerable debate. Almost all of the chapters could stand alone but the broad political theme used to bring chapters and topics together works well almost always' - "Local Government Studies" "Not only is Hammersley a leading exponent of sociological research, he is also a key writer and thinker on the problems of undertaking research. This collection, some of which has been published elsewhere and some not, therefore is a welcome addition to the literature on social research... interesting and well-argued' - "Disability and Society"

Social Research

This unique book explains the central role that research paradigms play in the design and conduct of social research. The authors argue that social research should not just describe or confirm a social problem but should seek to find an explanation for it – and to do so requires research with 'eyes philosophically wide open'. Important philosophical and practice elements of three widely recognized paradigms – Neo-Positive, Interpretive and Critical Realist – are carefully elaborated and their use in action illustrated with detailed examples. The authors show that the philosophical assumptions of a chosen paradigm must match those embedded in a characterization of a research problem and its context. This paradigm orientation is shown to be fundamental to appropriately framing a problem, formulating research questions, deciding on a logic of inquiry and selecting and using methods to investigate it. Ultimately, an appropriate paradigm orientation to social research provides a dispassionate, rigorous and effective basis for the production of new social scientific knowledge. Following on from Blaikie's *Approaches to Social Enquiry* and *Designing Social Research*, this innovative book will be invaluable to upper-level and research students, their lecturers and supervisors, and researchers across the social sciences.

Bundle: Crotty: the Foundations of Social Research + Patton

An attempt to bring some of the major issues and debates in the philosophy of social research up-to-date. There is a new chapter on the philosophy of science, the conclusion has been rewritten and other chapters have been updated.

The Philosophy of Social Research

Since its initial publication, this highly respected text has provided students with a critical review of the major research paradigms in the social sciences and the logics or strategies of enquiry associated with them. This second edition has been revised and updated.

Approaches to Social Enquiry

Brings the theory, philosophy and techniques of research to life and enables students to understand the relevance of the research methods. This book helps you learn from worked examples and case studies based on real student research, illustrating what to do and what not to do in your project.

Research Methods for Business Students

Now in its second edition, *Foundations of Education Research* defines, discusses, and offers applications for the central components of educational research, providing both novice and experienced researchers with a common ground from which to work. Fully updated throughout, the second edition adds a glossary of terms, additional examples, and includes a discussion of similarities and differences in education research. Eight concise, accessible chapters cover conceptual framework, epistemology, paradigm, theory, theoretical framework, and methodology/method. This unique primer demystifies jargon and makes the theoretical components of research accessible, giving students the tools they need to understand existing education research literature and to produce theoretically-grounded work of their own. Each chapter begins with perspectives from both novice and experienced researchers, whose guiding questions assist researchers engaging with theory for the first time and those looking to improve their understanding of the fundamentals. Practice exercises, examples, and suggested reading lists at the end of each chapter offer students resources they can apply to their own research and thinking in concrete ways. A perfect accompaniment to standard research courses, this book is designed to help students achieve a deeper understanding of what is expected of them and ideas about how to achieve it.

Foundations of Education Research

Social work students need to understand the relationship between research, knowledge and practice to be effective practitioners. In the second edition of this highly regarded book, Hugh McLaughlin shows how a research-minded perspective and an appreciation of evidence-based practice can lead students to achieve the highest level of individual and collective social work practice. Topics covered include:

- How to assess, appraise and apply research
- The philosophy of research
- Improving the use of research in practice
- Interdisciplinary contributions to social work and social work research

Providing reflexive questions, practice examples and suggested reading throughout, this book is essential reading for all undergraduate students of social work. It will also be valuable reading for postgraduates and qualified social workers wishing to consolidate their understanding of social work research.

Understanding Social Work Research

Aims to help practitioners to; promote excellence in the delivery of health care, function more effectively at work; respond to changes in health care; relate theory to practice; meet new standards for continuing education in the U.K.

Phenomenology and Nursing Research

This clearly written and provocative text outlines the wide range of epistemological and metaphysical pillars of research. In a clear, easy to follow style, the reader is guided through an array of concepts that are defined, explained and made simple. With the aid of helpful examples and case studies, the book challenges the prevailing modes of thinking about qualitative inquiry by showcasing an immense variety of philosophical frameworks. Armed with a strong understanding of this philosophical backbone, students will be able to choose and defend a 'pick and mix' of research methods that will uniquely complement their research. Empiricism Rationalism Realism Skepticism Idealism Positivism Post-positivism Idea-ism Hermeneutics Phenomenology Social Ontology Quantum Mechanics Essential reading

for new and experienced researchers, this 'must' for any social science bookshelf will help unlock a new level of research creativity.

Epistemology and Metaphysics for Qualitative Research

Over the last two decades Outdoor Studies has emerged as an innovative and vibrant field of study. This is the first book to offer a comprehensive appraisal of established and cutting-edge research methods as applied to Outdoor Studies. Covering qualitative, quantitative and mixed methods, the book examines key methodologies, themes and technologies such as digital research, mobile methodologies, ethnography, interviews, research design, research ethics and ways of disseminating research. Featuring contributions from leading researchers from a variety of disciplinary backgrounds, this is an essential text for any Outdoor Studies course or for researchers looking for innovative and creative research techniques.

Research Methods in Outdoor Studies

This book is the road map to proficiency and development in the field of qualitative research. Borrowing from a wealth of experience teaching introductory qualitative research courses, author Kakali Bhattacharya lays out a dynamic program for learning different paradigms of inquiry, empowering students to recognize the convergence of popular research methodologies as well as the nuances and complexities that set each of them apart. Her book: supplements the readings and activities in a qualitative methods class, exposing students to the research process and the dominant types of qualitative research; introduces a variety of theoretical perspectives in qualitative research, including positivism and postpositivism, interpretivism, feminism, symbolic interactionism, phenomenology, hermeneutics, critical theory, and Critical Race Theory; identifies and summarizes the three dominant methodological approaches in qualitative research: narrative inquiry, grounded theory, and ethnography; provides interactive activities and exercises to help students crystallize their understanding of the different topics in each chapter.

Fundamentals of Qualitative Research

A revolutionary textbook introducing masters and doctoral students to the major research approaches and methodologies in the social sciences. Written by an outstanding set of scholars, and derived from successful course teaching, this volume will empower students to choose their own approach to research, to justify this approach, and to situate it within the discipline. It addresses questions of ontology, epistemology and philosophy of social science, and proceeds to issues of methodology and research design essential for producing a good research proposal. It also introduces researchers to the main issues of debate and contention in the methodology of social sciences, identifying commonalities, historic continuities and genuine differences.

Approaches and Methodologies in the Social Sciences

Mixed Methods Research: A Guide to the Field by Vicki L. Plano Clark and Nataliya V. Ivankova is a practical book that introduces a unique socio-ecological framework for understanding the field of mixed methods research and its different perspectives. Based on the framework, it addresses basic questions including: What is the mixed methods research process? How is mixed methods research defined? Why is it used? What designs are available? How does mixed methods research intersect with other research approaches? What is mixed methods research quality? How is mixed methods shaped by personal, interpersonal, and social contexts? By focusing on the topics, perspectives, and debates occurring in the field of mixed methods research, the book helps students, scholars, and researchers identify, understand, and participate in these conversations to inform their own research practice. Mixed Methods Research is Volume 3 in the SAGE Mixed Methods Research Series.

Mixed Methods Research

'A sure-footed and self-confident book, ambitious in scope, authoritative in execution and practical in its implications' - Simon Maxwell, Director, Overseas Development Institute, London 'At last, a development studies text that encourages self-reflection from within the discipline. Highly recommended' - Professor Ray Kiely, Chair in International Politics, Queen Mary University of London 'This is the book that academics, development researchers and practitioners have been seeking for a long time. [It] addresses the most important issues which development researchers and practitioners cope

with each and every day' - Dr Tran Tuan, Director, Research and Training Centre for Community Development, Hanoi, Vietnam. 'An insightful book for both development practitioners and researchers alike' - Professor K.N. Nair, Director Centre for Development Studies, Kerala, India This book is about working professionally in Development Studies as a student, researcher or practitioner. It introduces and addresses the fundamental questions that everyone engaged with development must ask: " What is 'development' and why do we wish to study it? " How do the many theoretical, methodological and epistemological approaches relate to research and practical studies in development? " How are development research and practice linked? Accessibly written, with extensive use of case study material, this book is an essential primer for students of development studies who require a concise, penetrating overview of its foundations. It is also core reading for students and practitioners concerned with the design of studies in the course of policy analysis, sector reviews, or project formulation, management and evaluation.

Meta-Study of Qualitative Health Research

This rewritten, expanded and updated 7th edition of the long-running bestseller *Research Methods in Education* encompasses the whole range of methods currently employed by educational research at all stages. It offers plentiful and rich practical advice, underpinned by clear theoretical foundations, research evidence and up-to-date references. Chapters new to this edition cover: Causation, critical educational research, evaluation and the politics of research, including material on cross-cultural research, mixed methods and participatory research Choosing and planning a research project, including material on sampling, research questions, literature reviews and ethical issues Meta-analysis, research syntheses and systematic reviews Virtual worlds and internet research Using and analysing visual media and data in educational research Organizing and presenting qualitative data, content analysis, coding and computer analysis, themes, narratives, conversations and discourses, grounded theory Understanding and choosing statistical tests, descriptive and inferential statistics, multi-dimensional measurement and factor analysis *Research Methods in Education* is essential reading for both the professional researcher and students of education at undergraduate and postgraduate level, who need to understand how to plan, conduct, analyse and use research. The textbook is accompanied by a website: www.routledge.com/textbooks/cohen7e. PowerPoint slides for every chapter contain an outline of the chapter structure followed by a thorough summary of the key points, ideal for both lecturers and students. Within the book a variety of internet resources are referred to and these references have been included here, with links to the websites. A wide range of supplementary documents are available for many chapters, providing additional guidance and examples. They range from guidelines for the contents of a research proposal with a worked example, to screen-print manuals for using SPSS and QSR N6 NUD*IST (exportable to N-Vivo) plus data files.

Qualitative Research Design: An Interactive Approach, Second Edition provides researchers and students with a user-friendly, step-by-step guide to planning qualitative research. A bestseller in its First Edition, this invaluable book presents an innovative approach to the components of design and how they interact with each other. The text presents a clear strategy for creating coherent and workable relationships among these design components and highlights key design issues. Based on a course the author taught for seven years at the Harvard Graduate School of Education, the work is written in an informal, jargon-free style and incorporates many examples and hands-on exercises.

Qualitative Research Design

Qualitative researchers can now connect with participants online to collect deep, rich data and generate new understandings of contemporary research phenomena. *Doing Qualitative Research Online* gives students and researchers the practical and scholarly foundations needed to gain digital research literacies essential for designing and conducting studies based on qualitative data collected online. The book will take a broad view of methodologies, methods and ethics, covering: Ethical issues in research design and ethical relationships with participants Designing online qualitative studies Collecting qualitative data online through interviews, observations, participatory and arts-based research and a wide range

of posts and documents. Analyzing data and reporting findings Written by a scholar-practitioner in e-learning and online academia with 15 years' experience, this book will help all those new to online research by providing a range of examples and illustrations from published research. The text and accompanying materials will offer discussion and assignment ideas for ease of adoption.

Written specifically for students with no previous experience of research and research methodology, the Third Edition of Research Methodology breaks the process of designing and doing a research project into eight manageable steps and provides plenty of examples throughout to link theory to the practice of doing research. The book contains straightforward, practical guidance on: - Formulating a research question - Ethical considerations - Carrying out a literature review - Choosing a research design - Selecting a sample - Collecting and analysing qualitative and quantitative data - Writing a research report The third edition has been revised and updated to include extended coverage of qualitative research methods in addition to the existing comprehensive coverage of quantitative methods. There are also brand new learning features such as reflective questions throughout the text to help students consolidate their knowledge. The book is essential reading for undergraduate and postgraduate students in the social sciences embarking on qualitative or quantitative research projects.

When learning how to read, analyze, and design one's own research, it is useful to review examples of similar research. Understanding and Evaluating Qualitative Educational Research uses published research articles to teach students how to understand and evaluate qualitative research in education. Each example within a category of qualitative research - ethnography, grounded theory, phenomenology, case study, action research, narrative, and mixed methods - is accompanied by commentary from the editor regarding why the particular approach was used and how and why the various aspects of the example relate back to the approach taken. This commentary guides students in learning how to read, analyze, and create their own qualitative research studies. Included in the text is a series of "Issues and Concepts" that are at the forefront of the changing field. This text gives students in qualitative educational research a well-rounded and practical look at what qualitative research is, along with how to read, analyze, and design studies themselves.

Understanding and Evaluating Qualitative Educational Research

Online Interviewing is a short, accessible and highly practical introduction to designing and conducting online interviews in qualitative research. James and Busher focus on helping the reader to understand the methodological and epistemological challenges of carrying out online interviews in the virtual environment. This is an ideal introduction for anyone who is interested in using online methods and who has an interest in the theory of the method.

Advances in Mixed Methods Research provides an essential introduction to the fast-growing field of mixed methods research. Bergman's book examines the current state of mixed-methods research, exploring exciting new ways of conceptualizing and conducting empirical research in the social and health sciences. Contributions from the world's leading experts in qualitative, quantitative, and mixed methods approaches are brought together, clearing the way for a more constructive approach to social research. These contributions cover the main practical and methodological issues and include a number of different visions of what mixed methods research is. The discussion also covers the use of mixed methods in a diverse range of fields, including sociology, education, politics, psychology, computational science and methodology. This book represents an important contribution to the ongoing debate surrounding the use of mixed methods in the social sciences and health research, and presents a convincing argument that the conventional, paradigmatic view of qualitative and quantitative research is outdated and in need of replacement. It will be essential reading for anyone actively engaged in qualitative, quantitative and mixed methods research and for students of social research methods. Manfred Max Bergman is Chair of Methodology and Political Sociology at the University of Basel.

Advances in Mixed Methods Research

This four-volume major work collates and contextualises key papers on the use of case study in education. The collection brings together methodological publications and publications which provide exemplars of case study. The methodological material provides both critical analyses of case study and those which champion its use, offering at the same time a chronological map of the development of case study from its earliest uses to today. Framed by an introductory passage in each volume which seeks to provide a synopsis of the methodological discussion and a commentary on the exemplary material, this set provides for serious students in education original source material to appraise the method together with exemplary sample material to help them plan and organize their case studies. Volume One: Methodological issues around the use of case studies in social science Volume Two: Methodological issues around the use of case studies in education Volume Three: The case study in practice - general issues and specific examples Volume Four: Examples of case studies in education

This practical, hands-on guide helps beginning researchers create a mixed methods research proposal for their dissertations, grants, or general research studies. The book intertwines descriptions of the components of a research proposal (introduction, literature review, research methods, etc.) with discussions of the essential elements and steps of mixed methods research. Examples from a real-world, interdisciplinary, mixed methods research study demonstrate concepts in action throughout the book, and an entire sample proposal appears at the end of the book, giving readers insight into every step up to completion. Readers who complete the exercises in each chapter will have an individualized, detailed template for their own mixed methods research proposal. Developing a Mixed Methods Proposal is Volume 5 in the SAGE Mixed Methods Research Series.

Developing a Mixed Methods Proposal

The Second Edition of *Theoretical Frameworks in Qualitative Research*, by Vincent A. Anfara, Jr. and Norma T. Mertz, brings together some of today's leading qualitative researchers to discuss the frameworks behind their published qualitative studies. They share how they found and chose a theoretical framework, from what discipline the framework was drawn, what the framework posits, and how it influenced their study. Both novice and experienced qualitative researchers are able to learn first-hand from various contributors as they reflect on the process and decisions involved in completing their study. The book also provides background for beginning researchers about the nature of theoretical frameworks and their importance in qualitative research; about differences in perspective about the role of theoretical frameworks; and about how to find and use a theoretical framework.

Theoretical Frameworks in Qualitative Research

Three issues feature as the central themes throughout this book: the nature of social science in general; the nature of educational enquiry in particular; and the links between the language and concepts of research, on the one hand, and those of practice and policy on the other. In analyzing and interrelating these themes, Richard Pring shows their relationship to such central philosophical concepts as meaning, truth, and objectivity. This lucid and ambitious study will be seen as a classic of educational literature. Reviews of the first edition include: "A stimulating and readable book...Pring gives a succinct account of the different philosophical positions and makes a balanced evaluation of their strong and weak points...should be compulsory reading for all trainee teachers let alone educational researchers." -Dr Paul Martinez, Learning and Skills Development Agency Reviews Editor "This volume is a textbook and a manifesto, and research students will welcome the clarity with which the various concepts, tools and approaches are outlined. Most teachers will be stimulated by it." - Times Educational Supplement "Professor Pring's work is far more than the title modestly claims it to be. As much a primer in philosophy of education as a specialist work on the philosophy of educational research it is lucid and concise on topics ranging from the aim[s] of education to the nature of knowledge." - Education Review

Philosophy of Educational Research

Electronic Inspection Copy available for instructors here With the growth of work based learning and practitioner research this book leads the way by addressing key issues faced by 'insider-researchers' - learners, practitioners and managers doing research projects in the organizations and communities in which they themselves work, or where they are already familiar with the setting. The authors explore the implications of these research contexts, and discuss approaches and methodologies that

work based researchers might adopt, with a particular focus on ethics - one of the key concerns for those undertaking a research project of this type. This book is an authoritative and readable guide to the theory and practice of work based research. It is for anyone undertaking a research project based on work practice, including learners on postgraduate, undergraduate and doctoral programmes. Practitioners, managers and participants in work based courses or modules in education, healthcare and business management, will find it particularly useful.

Doing Work Based Research

How do you bridge the gap between what you learned in your statistics course and the questions you want to answer in your real-world research? Oriented towards distinct questions in a "How do I?" or "When should I?" format, *Your Statistical Consultant* is the equivalent of the expert colleague down the hall who fields questions about describing, explaining, and making recommendations regarding thorny or confusing statistical issues. The book serves as a compendium of statistical knowledge, both theoretical and applied, that addresses the questions most frequently asked by students, researchers and instructors. Written to be responsive to a wide range of inquiries and levels of expertise, the book is flexibly organized so readers can either read it sequentially or turn directly to the sections that correspond to their concerns.

Your Statistical Consultant

Scientific research in the social sciences, as in the natural sciences, involves a systematic investigation tempered by a method or logic of inquiry. A synoptic introduction to the philosophy of social science and methodology in social research, this collection of original essays by eminent social scientists is a festschrift in honour of Ramkrishna Mukherjee in recognition of his seminal contribution to social science knowledge.

Methodology in Social Research

The highly-anticipated second edition of the *Foundations of Mixed Methods Research: Integrating Quantitative and Qualitative Approaches in the Social and Behavioral Sciences* gives students a comprehensive overview of mixed methods from philosophical roots and traditions through designing, conducting, and disseminating a study. Authors Abbas Tashakkori, R. Burke Johnson, and Charles Teddlie have thoroughly updated the text to reflect the many advances over the last decade in mixed methods. New example studies throughout and a new appendix highlight the latest research on mixed methods and current best practices. New sections on evaluating quality in mixed methods studies and writing up research results round out the process of mixed methods research. The authors have added features like content summaries and objectives at the beginning of each chapter and chapter summaries and previews at the end of each chapter to aid readers in their mixed methods journey. Students across social science, behavioral science, and health and nursing fields are now expected to be proficient in mixed methods research. This text begins with an introduction to and overview of the development of mixed methodology, and then takes students through all aspects of working with mixed methods, from research design and data collection through to analysis and conclusions. This new edition includes additional information on writing, publishing, and disseminating results, as well as information on policy impact and annotated exemplars of mixed methods research studies. A new generation of mixed methods scholars can now engage with this vital text in mixed methods research.

Foundations of Mixed Methods Research

Research is often seen as a neutral, technical process through which researchers simply reveal or discover knowledge. A broader and more self-reflective stance is advocated in *Beyond Method*, one in which a knowledge of technique needs to be complemented by an appreciation of the nature of research as a distinctively human process, through which researchers make knowledge. Such an appreciation requires a reframing of understanding and debate about research, in a way that goes beyond considerations of method alone.

Beyond Method

Integrating Analyses in Mixed Methods Research goes beyond mixed methods research design and data collection, providing a pragmatic discussion of the challenges of effectively integrating data to facilitate a more comprehensive and rigorous level of analysis. Showcasing a range of strategies for

integrating different sources and forms of data as well as different approaches in analysis, it helps you plan, conduct, and disseminate complex analyses with confidence. Key techniques include: Building an integrative framework Analysing sequential, complementary and comparative data Identifying patterns and contrasts in linked data Categorizing, counting, and blending mixed data Managing dissonance and divergence Transforming analysis into warranted assertions With clear steps that can be tailored to any project, this book is perfect for students and researchers undertaking their own mixed methods research.

Integrating Analyses in Mixed Methods Research

This book provides a comprehensive overview of personal construct psychology (PCP) that will help researchers understand the why2s, what2s and how2s of conducting a rigorous constructivist research project. From the theoretical underpinnings of constructivist approaches to the practical values of these techniques, these three expert authors explain how to conduct interpretative, constructivist research from inception to completion. Key topics include: Understanding research philosophies and paradigms Constructing and exploring personal realities Establishing effective research procedures Evaluating grids, mapping, narrative and other research methods Managing the practicalities of fieldwork Analysing and presenting data With activities and procedural examples from a wide range of disciplines woven throughout the text and two special chapters featuring in-depth case studies from a variety of constructivist researchers, this book helps readers grasp the tools, designs, and opportunities of interpretative research. An essential companion for both researchers and practitioners looking to understand people's values, attitudes, beliefs, perceptions, or motivations!
