Although epilepsy is one of the nation's most common neurological disorders, public understanding of it is limited. Many people do not know the causes of epilepsy or what they should do if they see someone having a seizure. Epilepsy is a complex spectrum of disorders that affects an estimated 2.2 million Americans in a variety of ways, and is characterized by unpredictable seizures that differ in type, cause, and severity. Yet living with epilepsy is about much more than just seizures; the disorder is often defined in practical terms, such as challenges in school, uncertainties about social situations and employment, limitations on driving, and questions about independent living. The Institute of Medicine was asked to examine the public health dimensions of the epilepsies, focusing on public health surveillance and data collection; population and public health research; health policy, health care, and human services; and education for people with the disorder and their families, health care providers, and the public. In *Epilepsy Across the Spectrum*, the IOM makes recommendations ranging from the expansion of collaborative epilepsy surveillance efforts, to the coordination of public awareness efforts, to the engagement of people with epilepsy and their families in education, dissemination, and advocacy for improved care and services. Taking action across multiple dimensions will improve the lives of people with epilepsy and their families. The realistic, feasible, and action-oriented recommendations in this report can help enable short- and long-term improvements for people with epilepsy. For all epilepsy organizations and advocates, local, state, and federal agencies, researchers, health care professionals, people with epilepsy, as well as the public, *Epilepsy Across the Spectrum* is an essential resource.

The Comorbidities of Epilepsy

This volume describes the basics for short- and long-term treatment of Psychogenic Non-Epileptic Seizures (PNES) in children. The text acknowledges that the disorder, though rare and highly morbid, is treatable when it is not misdiagnosed. Given the limited diagnostic and clinical training offered to clinicians, this book aims to equip professionals with the tools needed to improve the poor quality of life of youth with PNES. The text begins by introducing the main features of the disorder and the problems involved in diagnosing PNES in children. It then describes techniques to overcome these problems in order to make a reliable and valid diagnosis of PNES, as well as provide feedback on the diagnosis and treatment plan. The last section describes the indications for cognitive behavior therapy for youth with PNES and suggested treatment paradigms. Incorporation of do's and don'ts and their relevant clinical examples in all sections of the proposed guide provide the reader with skills and techniques. The book also includes an appendix with resources for parents, children, and school nurses and teachers, relaxation techniques for the child and parents, templates of letters for the child's school about the condition and behavior management plan, templates of supporting letters from epileptologists and primary care physicians, CBT treatment paradigm, and information on individual supervision, workshops and webinars.
