Anatomy & Structures Of The Knee , knee pain - Everything You Need To Know - Dr. Nabil Ebraheim

- Anatomy & Structures Of The Knee , knee pain - Everything You Need To Know - Dr. Nabil Ebraheim

by nabil ebraheim 102,473 views 10 years ago 2 minutes, 47 seconds - Dr. Ebraheim's educational animated video describes the anatomical structures of the **knee**, in a very simple **and**, easy way.

Bony Structures of the Knee

The patellar tendon is a continuation of the quadriceps muscles that inserts into the tibial tubercle.

Patellar Articular -Surface of the Femur

The function of the ACL is to provide stability in the knee joint by preventing the tibia from sliding too far forward in relation to the femur.

The Posterior Cruciate Ligament (PCL) originates from the tibia posteriorly to the medial condyle of the femur.

The collateral ligaments are found on the sides of the knee and they are responsible for providing sideways stability of the knee joint.

The meniscus is a tissue made of cartilage that act as "shock absorbers" between the femur and tibia.

The two menisci of the knee joint are pads of tissue which serve to limit friction in the knee joint between the tibia and the femur.

This video ...

HYALINE CARTILAGE

There is about 2 cc's of synovial fluid inside the knee which helps in the motion and lubrication of the joint.

Good cartilage cells are sterile and cannot make more cartilage if these cartilage cells are destroyed.

What is the treatment of arthritis of the knee?

There are a number of treatment options that will help the patient.

The doctor will choose the right kind of medication

Losing weight

Low impact physical therapy

There are a number of treatment options that may help the patient.

The physician will also use intraarticular injection of steroids, viscosupplementation, or hyaluronic acid.

Steroid injections can be administered about 3-4 times per year.

Viscosupplementation will improve the quality of the joint fluid.

Other methods of injection

If the knee arthritis is moderate, then the physician has many options for treatment and none of these options are predictable in the result.

When dealing with a severe case of arthritis of the knee, simply "patching" the problem will not work.

You need to reduce the level of pain and improve the function of the knee.

When the roof of the house is totally destroyed, you have to change the roof, same principle as with total knee replacement.

Cartilage of the knee - water will increase early.

The doctor will remove all of the damaged cartilage and bone to insert a new knee.

There is not cure for arthritis.
