Through close readings of five Italian collections of novellas written over a 500-year period, Martin Marafioti explores the literary tradition of storytelling, and particularly its efficacy as a healing tool following traumatic visitations from the plague. In this study, Giovanni Boccaccio's Decameron provides the framework for later authors. Although Boccaccio was not the first writer to deal with pestilence or epidemics in a literary work, he was the first to unite the topos of a life-threatening context with a public health disaster like the Black Death, and certainly the first author to propose storytelling as a means of prophylaxis in times of plague. Marafioti goes on to analyze Franco Sacchetti's Trecento Novelle, Giovanni Sercambi's Novelliere, Celio Malespini's Duecento Novelle, and Francesco Argelati's Decamerone, following in its *longue-durée* the ups and down, structurally and thematically, of the realistic novella as a genre.

A History of Architectural Conservation expands knowledge about the conservation of ancient monuments, works of art and historic buildings. It includes the origins of the interest in conservation within the European context, and the development of the concepts from Antiquity and the Renaissance to the present day. Jokilehto illustrates how this development has influenced international collaboration in the protection and conservation of cultural heritage, and how it has formed the principal concepts and approach to conservation and restoration in today's multi-cultural society. This book is based on archival research of original documents and the study of key restoration examples in countries that have influenced the international conservation movement. Accessible and of great interest to students and the general public it includes conservation trends in Europe, the USA, India, Iran and Japan.

Lezioni Di Monsignore Giovanni Bottari Sopra Il Decamerone Volume 2

Gower's achievement in writing substantially in all three primary languages of his time-Anglo-French, English, and Latin-was a source of pride to others and, undoubtedly, to him too: into the final years of his life he continued to produce poetry in all three languages. Certainly there is reason to know these poems for the light they shed on the intense partisanship and events of great moment surrounding the usurpation 1399-1400. It was during these parlous times that Gower composed most of the poems included here. All are important documents historically; but they are also poems admirable equally for their skill and craft. In Praise of Peace is in the same position as the shorter Latin works edited and translated in this volume: ignored, neglected, reduced, or relegated to the dusty realm of footnotes. But there is far more at work in this complex poem, as Gower's verse deftly weaves in and out of the historical, political, social, and religious contexts and controversies of its day. In tone, In Praise of Peace is, if not triumphant, determinedly optimistic. In this light, we might view the poem as a coda to Gower's long career, restating and reinvigorating his famously moral principles about just rule of self and society.

Spreadsheet Modeling & Decision Analysis: A Practical Introduction to Management Science

Cliff Ragsdale is an innovator of the spreadsheet teaching revolution and is highly regarded in the field of management science. The 4th edition retains the elements and philosophy that has made its past editions so successful. New topics have been added as well as examples that are relevant to decision making in today's business world. This new edition of SPREADSHEET MODELING AND DECISION ANALYSIS provides succinct instruction in the most commonly used management science techniques and shows how these tools can be implemented using the most current version of Microsoft Excel for Windows. This text also focuses on developing both algebraic and spreadsheet modeling skills.

Lance Loud came to represent the gay community, and in addition, embodied the creative spirit and genius of outsider status that became the 1980s and fuelled so much of what has evolved today in our culture in terms of art, music and literature. In 2003, PBS broadcast the program, Lance Loud: A Death in an American Family, which was filmed in 2001 while visiting the family again, at the invitation

of Lance before his death at age 50. As seen here, short as Lance's life was, it was a monumental one that continues to resonate to the present day.

The mathematical methods that physical scientists need for solving substantial problems in their fields of study are set out clearly and simply in this tutorial-style textbook. Students will develop problem-solving skills through hundreds of worked examples, self-test questions and homework problems. Each chapter concludes with a summary of the main procedures and results and all assumed prior knowledge is summarized in one of the appendices. Over 300 worked examples show how to use the techniques and around 100 self-test questions in the footnotes act as checkpoints to build student confidence. Nearly 400 end-of-chapter problems combine ideas from the chapter to reinforce the concepts. Hints and outline answers to the odd-numbered problems are given at the end of each chapter, with fully-worked solutions to these problems given in the accompanying Student Solutions Manual. Fully-worked solutions to all problems, password-protected for instructors, are available at www.cambridge.org/essential.

'KUMBA AFRICA', is a compilation of African Short Stories written as fiction by Sampson Ejike Odum, nostalgically taking our memory back several thousands of years ago in Africa, reminding us about our past heritage. It digs deep into the traditional life style of the Africans of old, their beliefs, their leadership, their courage, their culture, their wars, their defeat and their victories long before the emergence of the white man on the soil of Africa. As a talented writer of rich resource and superior creativity, armed with in-depth knowledge of different cultures and traditions in Africa, the Author throws light on the rich cultural heritage of the people of Africa when civilization was yet unknown to the people. The book reminds the readers that the Africans of old kept their pride and still enjoyed their own lives. They celebrated victories when wars were won, enjoyed their New Yam festivals and villages engaged themselves in seasonal wrestling contest etc; Early morning during harmattan season, they gathered firewood and made fire inside their small huts to hit up their bodies from the chilling cold of the harmattan. That was the Africa of old we will always remember. In Africa today, the story have changed. The people now enjoy civilized cultures made possible by the influence of the white man through

his scientific and technological process. Yet there are some uncivilized places in Africa whose people haven't tested or felt the impact of civilization. These people still maintain their ancient traditions and culture. In everything, we believe that days when people paraded barefooted in Africa to the swamp to tap palm wine and fetch firewood from there farms are almost fading away. The huts are now gradually been replaced with houses built of blocks and beautiful roofs. Thanks to modern civilization. Donkeys and camels are no longer used for carrying heavy loads for merchants. They are now been replaced by heavy trucks and lorries. African traditional methods of healing are now been substituted by hospitals. In all these, I will always love and remember Africa, the home of my birth and must respect her cultures and traditions as an AFRICAN AUTHOR.

The Chemistry Maths Book is a comprehensive textbook of mathematics for undergraduate students of chemistry. Such students often find themselves unprepared and ill-equipped to deal with the mathematical content of their chemistry courses. Textbooks designed to overcome this problem have so far been too basic for complete undergraduate courses and have been unpopular with students. However, this modern textbook provides a complete and up-to-date course companion suitable for all levels of undergraduate chemistry courses. All the most useful and important topics are covered with numerous examples of applications in chemistry and some in physics. The subject is developed in a logical and consistent way with few assumptions of prior knowledge of mathematics. This text is sure to become a widely adopted text and will be highly recommended for all chemistry courses.
