

Chromatographic Fingerprint Analysis Of Herbal Medicines Volume Iii Thin Layer And High Performance Liquid Chromatography Of Chinese Drugs

[#chromatographic fingerprint analysis](#) [#herbal medicine quality control](#) [#TLC HPLC methods](#) [#Chinese drug authentication](#) [#phytochemical profiling](#)

Explore the crucial role of chromatographic fingerprint analysis in ensuring the quality and authenticity of herbal medicines, with a special focus on Chinese drugs. This resource, Volume III, delves into practical applications of Thin Layer Chromatography (TLC) and High Performance Liquid Chromatography (HPLC) techniques for comprehensive phytochemical profiling and robust quality control.

Our syllabus archive provides structured outlines for university and college courses.

extraction

separation is based on differing solubilities

Thin Layer Chromatography (TLC)

separation is based on differing polarities

TLC plates

network solid of silicon dioxide

spot the plate using a capillary tube

press the tube firmly to the plate in order to deposit the solution

cover the beaker

mark the solvent line with a pencil

we will have to use special techniques to maintain eye safety

we may have to use a staining agent (iodine, anisaldehyde, potassium permanganate)

we can use TLC to monitor a reaction

we can use TLC to select a solvent system for use during column chromatography

we need a solvent system that will give good separation between components

this solvent system will do a bad job at separating the components

with this solvent system the separation will take an extremely long time

this is the solvent system we will use for column chromatography
