what is seed germination?

the life of a plant starts from a seed.

A seed has three major parts

which is the outer layer that protects the plants

there is the baby plant called an embryo.

we need to check the level of moisture

the right amount of sunlight

a tree that lives in the desert

resulting in swelling and softening of the seed coat

Later the root grows and pushes down

rising through the seed coat

searching for sunlight.

the cotyledon-has finished its job.

Once the cotyledon is gone.

growing into a plant is called germination.

Zooming out!
