Laboratory Manual for Physical Geology

The new edition of this popular laboratory manual continues to provide introductory lab exercises for students studying physical geology. It incorporates exercises involving key areas in physical geology such as earth materials, topographic maps, aerial photographs, structural geology and plate tectonics.

Laboratory Manual in Physical Geology

This Laboratory Manual in Physical Geology is a richly illustrated, user friendly laboratory manual for teaching introductory geology and geoscience

Laboratory Manual in Physical Geology

This user-friendly, best-selling lab manual examines the basic processes of geology and their applications to everyday life. Featuring contributions from over 170 highly regarded geologists and geoscience educators, along with an exceptional illustration program by Dennis Tasa, Laboratory Manual in Physical Geology, Ninth Edition offers a new activities-based approach that gives you a more complete learning experience in the lab.

Laboratory Manual in Physical Geology, Fifth Edition

The Sixth Edition of the Introductory Geology Lab Manual, by J Bret Bennington and Charles Merguerian is being distributed by McGraw-Hill Publishers. The manual offers twelve integrated hands-on laboratory modules with major emphasis on mineral- and rock identification, map reading and interpretation, and earthquakes. The manual features an appendix on the geology of the southern part of the New England Appalachians but could be easily customized for adoption in other regions of the country. In a concise, no frills, and cost-effective manner, it covers the major topics in Physical Geology and is appropriate for both science and non-science majors. The manual's primary focus is basic and simple in that it employs methods of logical and inductive reasoning. It has been rigorously tested for effectiveness at the undergraduate level over the past ten years, the writing style is crisp and the graphics, diagrams, and tables are easy to read and understand. This 185-page manual is priced inexpensively and has removable worksheets.

Physical Geology Laboratory Manual

This package contains the following components: -0321689577: Laboratory Manual in Physical Geology -0321714725: Essentials of Geology

Physical Geology

For the laboratory course accompanying a first-year Physical Geology or Geoscience course. Useful in courses in Environmental Geology or Engineering Geology. Designed to be used with any physical geology textbook or collection of course materials, this stand-alone lab manual features 68 exercises covering 19 key geologic topics all in true workbook format so that students can complete lab activities right in the manual. Unique and intuitive, the exercises teach students basic geologic field and lab skills, and are based on the principles of scientific inquiry that challenge students to think beyond the activity at hand to the larger questions of applied geologic work. This lab manual features high-quality, truly useful maps, diagrams, and photos, and does not attempt to repeat the amount of text available in the students' textbook.

Laboratory Manual for Physical Geology

This laboratory manual is written for the freshman-level laboratory course in physical geology. In this lab, students study Earth materials, geologic interpretation of topographic maps, aerial photographs and Earth satellite imagery, structural geology and plate tectonics and related phenomena. With nearly 30 exercises, professors have great flexibility when developing the syllabus for their physical geology lab course. The ease of use, tremendous selection, and tried and true nature of the labs selected have made this lab manual one of the leading selling physical geology lab manuals.

Physical Geology Laboratory Manual

A comprehensive introduction that focuses on all of the major scientific processes of physical geology. Researched and written by two eminent geologists, the third edition includes new overarching themes of environmental issues and human interaction with the earth and its resources. Each chapter begins with an essay on this subject. Each part ends with a guest essay on the good stewardship of the Earth--how we can take care of our planet. The art program has been revised with 40% new art throughout to reflect current research.

Intro

MICROBIAL INSIDER

What is a Biosafety level

Biosafety is the application of safety precautions that reduce a laboratorian's risk of exposure to a potentially infectious microbe and limit contamination of the work environment and ultimately the community.

These are sets of biocontainment controls that are required to separate biological agents based on the risk they cause on the environment and

Standard microbiological practices

Safety equipments

is commonly used while performing tests on microbial agents that are not known to cause diseases in immune-compromised individuals.

These laboratories include the laboratories used for teaching purposes in colleges and training centers.

ORGANISMS

BIOSAFETY LEVEL 2

laboratories are the laboratories that are used for the tasks involving microbial agents of moderate potential hazards to the laboratory personnel, the environment, and the agent.

SAFETY PRACTICES

Biosafety level-2 laboratories are mostly used for routine analysis and culture of moderately hazardous agents.

E. coli, Staphylococcus and Plasmodium falciparum

BIOSAFETY LEVEL 3

BSL-3) is the level where work is performed with agents that may cause severe or potentially lethal disease through inhalation or aerosol formation, to the personnel, and may even contaminate the environment.

The tasks performed in the BSL-3 laboratories involve indigenous or exotic agents where the potential for infection by aerosols is high, and the disease may have lethal consequences.

The doors of the BSL-3 laboratories are closed at all times with appropriate BSL-3 signs outside the suite, along with a universal biohazard sign and emergency contact information.

BSL-3 laboratories are used for clinical, diagnostic, teaching, research, or production facilities.

These laboratories are used for the handling and manipulation of highly infectious agents that pose direct severe effects on the health of the personnel.

The pathogens that require BSL-3 laboratories include HIV, and Mycobacterium tuberculosis

is the highest level that is employed while working with dangerous infectious agents that present a high individual as well as environmental risk in the form of life-threatening disease, aerosol transmission, or unknown risk of transmission.

The BSL-4 laboratories are often used while handling and manipulating Risk Group 4 pathogens that are extremely dangerous, with no known vaccines or therapies, and require extreme precautions

during work.

The BSL-4 laboratories are of two types; cabinet laboratory where all the work is performed in a Class III biosafety cabinet or similar physical containment with very carefully formulated precautions and suit laboratory where all the laboratory personnel are required to wear full-body, air-supplied suits protective gears in the form of PPES.

Personnel can enter and leave the facility only after the clothing change and through the shower rooms.

A system is set up for reporting laboratory accidents, exposures, and the medical surveillance of potential laboratory-associated illnesses.

Only individuals whose presence in the facility is required for microbiological processes or support purposes are authorized to enter.

A Class III biological safety cabinet or Class I or II biological safety cabinets used in conjunction with one-piece personnel suits ventilated by a life support system are to be present in a BSL-4 while conducting all procedures within the facility.

USES

BSL-4 laboratories are used for diagnostic and research work on easily transmitted pathogens, causing fatal diseases.

They are also used for clinical and production facilities that require highly sophisticated techniques and advanced processes.

 Scientific investigations use a variety of methods, tools, and techniques to revise and produce new knowledge
 But, performing laboratories can be dangerous if students are not focused and proper safety precautions are not followed
 Let's take a look at some of the most basic rules that should be followed in any school science lab
 Tie back long hair. Don't wear baggy clothing or hanging jewelry that can touch heat or chemical sources
 Open-toed shoes are not appropriate for the lab. Wear sneakers.
 NO FOOD or drinks are allowed during laboratory activities. This includes gum. Wash your hands before and after handling any lab materials
 Keep the lab area clean and free of unnecessary books, papers, coats, backpacks, and equipment
 Point test tubes that are being heated away from yourself and away from others. Chemicals can splash, boil, or even explode out of a heated tube
 Never heat a liquid in a closed container Expanding gases may blow the container apart
 Never pick up a container that has been heated using your bare hands. Use tongs if instructed
 Never inhale or smell fumes directly from a container. Use a *wafting* motion if instructed to smell.
 Properly dispose of waste- never put materials down the sink or in the regular trash without the instruction of your teacher.

Report broken glass to the teacher and do not handle. Never put broken glass into the regular trash can

Lab etiquette is extremely important for the proper functioning of a classroom lab and the safety of yourself and those around you.

Review the rules to prepare yourself for safe and meaningful laboratory experiences!
