[#Mercury Outboard TPS](#) [#Throttle Position Sensor Mercury](#) [#Outboard Engine Sensor](#) [#Mercury Marine Parts](#) [#Boat Throttle Sensor](#)

Discover the essential role of a Mercury Outboard Throttle Position Sensor (TPS) in maintaining optimal engine performance. This vital component accurately monitors the throttle's position, relaying crucial data to your outboard's engine control unit (ECU) for precise fuel delivery and ignition timing. Ensuring your Mercury Outboard TPS is functioning correctly is key to smooth acceleration, fuel efficiency, and overall reliable operation, making it a critical Mercury Marine part for any boater.

How to install Mercury throttle and

This is for a 1996 Mercury 40HP, 2 stroke engine with a Quicksilver remote controller.

Recommend you see my video on how to disassemble the remote. Link in the description below.

Whether new or old cables, you want to make sure that they are long enough.

They need to be able to connect to the remote and the engine with no sharp angles. A smooth flow.

Start with the easy end. The remote. There is no adjustment there.

This is how they look installed. To get there, the holders are installed like this. 5/16 inch nuts

The cables enter the engine through this rubber holder. Shift on the bottom, throttle next and finally the wiring harness on top.

Gearbox cable gets adjusted first. Have remote in idle position. Shifter on engine must be in neutral.

Adjust barrel on threads so that when the cable end is in shifter stud, the barrel lines up with barrel holder.

When correct, close shifter stud lock and slide barrel into plastic holder.

Push the controller to the "Forward Idle" position. Ensure actuator moves into forward position.

Do the same for reverse. Adjust barrel as necessary.

For the throttle cable, move barrel till engine end is at the idle position. This is a shot of my engine's

Connect the throttle cable to the throttle arm with the screw, plate, spring and nut.

Put the barrel in the plastic holder, slip it in the groove and snap the cover shut.

Push the controller to the "Forward Idle" position. Throttle position should NOT change at engine.

The same should happen when you go to "Reverse Idle."

Go to WOT position on the controller. The throttle arm should be at the stops. The carb throttle plates should be wide open.

BTW, I have a pontoon boat and found that the only way to thread the cables was to take

When you open it up, be prepared for surprises!
