Bob has had his computer for a while and was just bragging to his friend about how reliable it was. The next morning, he goes to power on his computer, and nothing happens. He checks and makes sure all cords are plugged in, but still no luck. What could be the issue?

Tim is an avid gamer and spends countless hours on his computer playing the latest installment of World of Warcraft (WoW). During this particular session, he has been playing for an unprecedented stretch of 36 hours straight! Suddenly, he gets a whiff of a burning smell coming from his computer and immediately shuts it down. What could the problem be?

Tiffany is enjoying some downtime on her new desktop computer, when suddenly her computer powers off. She checks to make sure the power cords are still in place and she finds that they are. She thinks she should check the power supply in her computer, but her parents tell her that the power outlet she is using has always caused issues. What device could she use to check the voltages of both?

Jon is a data scientist and consistently plays around with large data files on his desktop computer. While trying to pull up one extremely large file, Jon begins to hear a very loud clicking noise. What could this possibly indicate?

Mike loves music and has recently borrowed a USB drive from his friend to copy over a new album. He leaves the USB drive inserted into the computer, and shuts it down for the night after he is finished. The next day, he goes to boot up his machine, and it displays a message saying "OS Not Found".

What could be the problem?

After coming into work early to assist on a project, Tim finds that his computer monitor shows no image on the screen after turning it on. He checks and confirms that he is getting power to both the computer and monitor, so that shouldn't be an issue. What could be wrong with Tim's display? A. The VGA connection was not seated completely. B. The wireless was turned off by accident. C. The monitor ethernet cable became disconnected. D. The computer is busy performing a defrag

Jessica is interning at the IT help desk and your boss assigned you to mentor her and provide senior leadership while he is away on vacation. She receives a call from one of the executives, who says her laptop screen is appearing really dim and that she can't remember making any changes. Jessica asks for your advice. What could be the cause of this issue? A. The video cable is connected to the wrong port. B. The laptop is in power saving mode. C. The executive's IP address changed, causing erratic behavior. D. The wireless signal is affecting the display brightness.

Peter had a long day at work and plans to just watch Netflix movies for the rest of the night when he gets home. After turning on his tablet, he notices that it is not connecting to his wireless access point. He double-checks and confirms that his access point is not showing up in the list of available connections. What could be the issue? A offline access point

Sam is a junior network engineer at your company and has been asked to troubleshoot an issue for a client who is using Windows. While remotely troubleshooting, Sam wants to check the client's IP configuration for issues. What command can Sam tell the client to use to find this information?

A customer has come to you for help with his mobile phone battery. Earlier in the day, the customer noticed that the back of the device was bulging out and opened the case to find that the battery was swollen. What can cause batteries to swell?

Your computer vendor is scheduled to stop by the office tomorrow morning to complete her 6-month maintenance on the new printer you recently purchased. Your boss has looked over the list of steps she plans to complete and is wondering how she will accomplish removing the toner dust from the printer. Which tool will the vendor use to accomplish this task?

Your company is starting to grow, and your CIO asks if you can set up an extra printer, solely for the executives to use. You grab an old printer out of the storage closet in the back, but it's filled with dust from sitting for so long. What common item could be used to clean the dust off of the old printer?

Your printer technician is troubleshooting the main company printer, and he could use your help. He says that all of the parts appear to be in good shape and he can't see any mechanical reason why the printer isn't working. He asks you if you can restart the print service that manages the printing in the background. What is the name of this service?

After getting home from the office, you decide to play around with your computer settings before dinner to help prepare you for the new CompTIA A+ exam. While inside the BIOS, you notice that date and time settings are all wrong, even though you just set them last night. This points to an issue with what component?

The email client on a user's PC fails to send or receive new messages to an external user. What would

The Few Things You Need To Know about Tendon Healing It's Initiated by Fiberglass Blasts and Macrophages Tendon Repair Is Weakest at Seven to Ten Days Maximum Strength Is at Six Months Mobilization Increases Strength of Tendon Repair but in the Hand Obviously It Can Be a Detriment because You Get a Lot of Adhesions and Sand Lose Motion so the Key Is Having a Strong Enough Tendon Repair That Allows Orally or Relatively Early Motion To Prevent Adhesions Ligaments Type One Collagen Seventy Percent so Tendons Were 85 % Type One Collagen Ligaments Are Less so They Stabilize Joints They'Re Similar Structures to Tenants but They'Re More Elastic and They Have Less Collagen Content They Have More Elastin

So They'Re Forced Velocity Vectors Can Be Added Subtracted and Split into Components and They'Re Important for some of these Questions They Ask You for Free Body Analysis You Have a Resultant Force Which Is Single Force Equivalent to a System of Forces Acting on a Body So in this Case the Resultant Force Is the Force from the Ground Up across the Hinge of the Seesaw the Aquila Equilibrium Force of Equal Magnitude and Opposite to the Resultant Force so You Have the Two Bodies You Have a Moment Arm We'Li Talk about this and Then You Have a Resultant Force so that the Forces Are in Equilibrium They Negate each Other They'Re Equal to Zero

You Have a Moment Arm We'Li Talk about this and Then You Have a Resultant Force so that the Forces Are in Equilibrium They Negate each Other They'Re Equal to Zero and that's What's Important for Freebody Analysis You Have To Know What a Moment Is It's the Moment a Moment Is a Rotational Effect of a Force on a Body at a Point so You Know When You'Re Using a Wrench a Moment Is Is the Torque of that Wrench and It's Defined by the Force Applied in the Distance or the Moment Arm from the Site of Action so that's What You Need To Be Familiar with a Moment Arm and We'Li Talk about that Shortly a Definition Mass Moment of Inertia Is a Resistant to Wrote Resistance to Rotation So You Know When You'Re Using a Wrench a Moment Is Is the Torque of that Wrench and It's Defined by the Force Applied in the Distance or the Moment Arm from the Site of Action so that's What You Need To Be Familiar with a Moment Arm and We'Li Talk about that Shortly a Definition Mass Moment of Inertia Is a Resistant to Wrote Resistance to Rotation You Have To Overcome the Mass Moment of Inertia before You Actually Have an Effect Freebody Diagrams I Yeah You Just Have To Get a Basic Idea How To Answer these I Didn't Have One on My Boards Two Years Ago but that Doesn't Mean They Won't Show

The Effect of the Weight Is Going To Be the Weight plus the Distance from the Center of Gravity That's the Moment Arm Okay so You Have that Now What's Counteracting that from Keep You from Toppling Over Is that Your Extensor Muscles of the Spine Are Acting and Keeping You Upright and that Is Equivalent to that Force plus the Moment Arm from the Center of Gravity and all of this Is Zero When in Equilibrium All this Is Zero so the Key to these Freebody Diagrams Is that You Determine the Force from One Object Determine the Force from the Opposite Object

Again Definitions Will Save You What's Stress It's the Intensity of Internal Force It's Determined by Force over Area It's the Internal Resistance of a Body to a Load so You'Re Going To Apply a Load and the Force Internal Force That Generates To Counteract that Load Is the Stress and It's Determined by Force over Area and It's a Pascal's Is the Unit It's Newtons over Meters Squared Strain Is the

Measure of Deformation of a Body as a Result of Loading Strain Is a Is a Proportion It's the Change You Load an Object It Changes in Length under that Load so the Change in that Length over the Original Length Is the Strain

And It's Determined by Force over Area and It's a Pascal's Is the Unit It's Newtons over Meters Squared Strain Is the Measure of Deformation of a Body as a Result of Loading Strain Is a Is a Proportion It's the Change You Load an Object It Changes in Length under that Load so the Change in that Length over the Original Length Is the Strain and It Has no Units That's Been a Question Actually Which of these Components Has no Units Stress or Strain or and Stress and Strain Is the Answer no this At Least until after Your Board Stress-Strain Curve

Again Definitions Will Say Oh It's a View the Yield Point or the Proportional Limit Is the Transition Point from the Elastic Which Is the Linear Portion of this Curve So if You're along with in that Linear Proportionate and You Apply a Load once You Reduce the Produce That Load It's Going To Return to Its Normal Shape Right but once You Get Past that You Get into the Plastic Portion of It and that's the Yield Point the Ultimate Strength Is the Maximum Strength Strength Obtained by a Material before It Reaches Its Breaking Point Breaking Point Is Where the Point Where the Material Fractures Plastic Deformation Is Change in Length after Removing the Load in the Plastic

You Get into the Plastic Portion of It and that's the Yield Point the Ultimate Strength Is the Maximum Strength Strength Obtained by a Material before It Reaches Its Breaking Point Breaking Point Is Where the Point Where the Material Fractures Plastic Deformation Is Change in Length after Removing the Load in the Plastic Range You Don't Get Returned to Its Normal Shape the Strain Energy Is the Capacity of the Material To Absorb Energy It's the Area under the Stress-Strain Curve There this Again Definitions They'Re Really Not Going To Ask You To Apply this I Just Want You To Know What They Mean Hookes Law Stress Is Proportional To Strain Up to the Proportional Limit There's no Recoverable Elastic Deformation They They Have Fully Recoverable Elastic Deformation Prior to Failure They Don't Undergo a Plastic Deformation Phase so They'LI Deform to a Point and When They Deform Then They'LI Fatigue They'LI Fail Okay so There's no Plastic Area under the Curve for a Brittle Material a Ductile Material Is Diff Different Such as Metal Where You Have a Large Amount of Plastic Deformation Prior to Failure and Ductility Is Defined as Post Yield Deformation so a Metal Will Deform before It Fails Completely So Undergo Plastic Deformation What's Visco-Elasticity That's Seen in Bone and Ligaments Again Definitions It Exhibits Stress-Strain Behavior Behavior That Is Time-Dependent Materials Deformation Depends on Load
