Trounce's Clinical Pharmacology for Nurses and Allied Health Professionals

This is the eBook of the printed book and may not include any media, website access codes, or print supplements that may come packaged with the bound book. For pharmacology courses in nursing programs Help students think like nurses and understand how pharmacology relates to patient care When drugs are learned in isolation from their associated diseases, students have difficulty connecting pharmacotherapy, pathophysiology, and nursing care. Pharmacology for Nurses: A Pathophysiologic Approach, Fifth Edition, helps students master pharmacology by tightly linking it to therapeutic goals and patient wellness. Organized by body systems and diseases, it places drugs in context with how they are used therapeutically. Students can then easily locate relevant anatomy, physiology, pathology, and pharmacology in the same chapter. Nursing Process Application features clearly relate pharmacology to key nursing processes. Features highlighting complementary therapies, community-oriented and evidence-based practices, and lifespan considerations help students make connections to nursing practice. To give readers a clear picture of the holistic nature of pharmacology, the Fifth Edition reflects current pharmacotherapeutics and advances in understanding disease. Also available with MyNursingLab® MyNursingLab is an online homework, tutorial, and assessment program designed to engage students in the Pharmacology course and improve results. Its guided learning path is proven to help students think like a nurse as they move beyond memorization to true understanding through application. Pharmacology - Text and Study Guide Package

This ideal starter text for student nurses makes pharmacology less intimidating by focusing on the knowledge needed at pre-registration level in order to practice as a newly qualified nurse. Noted for its clear layout and jargon-free language, this updated edition introduces pharmacology in a friendly, informative way. The book does not assume previous knowledge of pharmacology, or a level of confidence with maths and drugs calculations. This new edition has been carefully expanded to include a new chapter introducing drug calculations and measurements as well as more detail on drugs used in chronic conditions, as well as more on pharmacology for the older patient and for other specific groups such as children, pregnant women or those with minor illness. More case scenarios have been added to encourage nurses to apply knowledge to a range of different people with a range of needs. The book contains: 90 calculations and 100 multiple choice questions to help perfect your skills and assess learning Clinical tip boxes linking pharmacology to the role of the nurse 35 patient scenarios across a range of clinical settings References to key clinical tests and the latest NICE guidelines The book emphasises application of pharmacological principles to all areas of practice including drug action, interaction and side effects, and is useful to all students of pharmacology whether as part of a 3 year course, post-qualifying course, top-up course or standalone module. "This latest edition of a key textbook on pharmacology for nurses has moved forward from previous editions by becoming stronger by the inclusion of a greater scope of material so maintaining its place as an essential pharmacology book for current and forthcoming nursing students in all clinical practice fields to give them a strong evidence base for their studies and clinical practice. The addition of a chapter on drug calculations is an essential step forward in this edition for all students as this is a key component within all current nursing degree programmes. The continued use of case studies and clinical tips makes learning fun both as an individual but also in small learning groups of students. It follows a clear pathway for learning: it is easy

to read, is clearly written and shows the importance of aspects of pharmacology within the work of a nurse." Keith Booles, Senior Nurse Lecturer/Module Leader, Faculty of Health Sciences, Staffordshire University, UK "With the ever evolving role of nursing it is essential, for safe practice, that all nurses have knowledge of pharmacology. This latest edition of essentials of pharmacology for nurses offers just that. This is a well presented book with logical, thought out chapters that enable the reader to learn at their own pace. Although aimed at undergraduate nurses, I feel that this is a good base to build on pharmacology knowledge, not only for undergraduate nurses but also trained nurses." Sharon Riverol NHS West Cheshire CCG, UK

Pharmacology + Student Workbook and Resource Guide

This book is intended to serve as a textbook for nursing students as well as a ready reference for nursing practitioners. Besides imparting basic knowledge on pharmacology, the book also discusses nurses' roles and interventions in different settings and contexts with each unit: preventive pharmacology, infection control, poisoning, medicolegal aspects, fluid and electrolyte balance, and more. Knowledge of pharmacology enables the nurse to understand how drugs work in the human body, and to anticipate and recognize the potential side effects in a timely manner, though there is inadequate focus on these issues in their curriculum. Transitioning from new graduates to the full professional role requires gaining clinical expertise coupled with an orientation to the unit and a formal transition to practice programme. The focus of this book, in addition to learning pharmacology, is on the applied aspects of pharmacology and Influence on the nursing practices. This book is Intended to serve as a textbook for nursing students as well as a readyreference for nursing practitioners. Besides Imparting basic knowledge on pharmacology, the book also discusses nurses' roles and interventions in different settings and contexts with each unit: Preventive pharmacology, infection contro, poisoning, medico legal aspects, fluid and electrolyte balance, etc. The special features of the book are: - The first unit which deals with all aspects of medication, - General pharmacology concepts, - Dosage forms, - Routes of administration, - Storage and handling of high alert medications, - Controlled drugs and vaccines. - Another unique feature Is the discussion on ethics, laws and, professional regulations In nursing practice.
