Making Woodlands Profitable in the Southern States

"Farm forestry helps farmers in : Marketing timber profitably. Supplying timber for farm needs. Furnishing paying employment during the winter. Making waste lands yield a profit. Increasing the sale value of the farm. Farm forestry means: Improving the woods by the fight kind of cutting. Protecting the woods from fire and other injuries. Utilizing farm timber to the best advantage. Reclaiming gullies and utilizing waste lands by planting forest trees. Keeping the home forest growing at its maximum rate of production. Farm forestry, as a branch of agriculture, is the handling of forest trees and woodlands in such a manner as to increase the income and permanent value of the farm and add to its comvort and attractiveness as a home."--Page [2].

Making Woodlands Profitable in the Southern States

A liberal supply of the highest quality of hay obtainable can generally be used to good advantage in the efficient production of livestock and livestock products.

Making Woodlands Profitable in Southern States. (Rev.1932).

The bean crop of the Southwest suffers severe injury from the bean ladybird, which sometimes ruins entire crops. It is restricted to beans for food and attacks all kinds. Both beetles and their larvæ devour all parts of the plant -- leaves, flowers and pods -- but the chief injury is to the foliage. The pest can be controlled in small areas by hand-picking the overwintered beetles and by brushing the larvæ or young from the plants during hot, dry weather. On a larger scale it may be controlled by spraying with arsenite of zinc, arsenate of lead, or arsenate of lime. Clean cultivation should be practiced and early and late planting."--[2]

Potato Production in the South

"Sheep are kept with profit on numerous farms scattered throughout the irrigated districts of the northwest. On some of these farms they have been kept with success for many years so that sheep raising is by no means an experimental enterprise on such farms. The present outlook for the sheep business appears to warrant the maintenance of many more farm flocks than are now being kept in these districts, and this bulletin is designed to further the expansion of the industry by pointing out its possibilities and by giving examples of good farm practice with sheep. The method of handling and feeding sheep as practiced on 12 representative irrigated farms, large and small, and in various parts of the Northwest are described in some detail. A few of these farms specialize in sheep, but on most of the sheep enterprise is combined with some other major enterprise such as dairying, hog raising, growing sugar beets, or orcharding. One of the more serious problems that the farmer must face in introducing sheep on an irrigated farm is that of pasture; hence special attention has been given to outlining methods to be followed in establishing pasture grasses and pasture supplements."--Page 2

List of Available Publications of the United States Department of Agriculture

The Rio Grande National Forest is a storehouse of great natural wealth. It is an important economic factor in the welfare of the surrounding local communities. It is a public asset in which every one of its users should have a personal interest.

Pamphlets on Conservation of Natural Resources

This publication has been prepared primarily for the use of leaders of young people's forestry clubs. Its purpose is to suggest forestry activities suitable for young people and ways and means of carrying on those activities. Some are suitable only for clubs formed by boys and girls, living on farms or in smaller towns; others are more suitable for young people living in the larger cities.
