Civilizations

The Indian Ocean has served as the world's greatest trading highway for millennia not merely because of cultural imperatives, but because the regular monsoon winds blow one way in the summer and the other in the winter."

Civilizations

Civilizations is a radical cultural history of mankind's relationship with nature, which advances a new understanding of what it means to be civilised. Fernández-Armesto is the author of ten books, including Millennium, Truth and Columbus.

Civilizations

Erudite, wide-ranging, a work of dazzling scholarship written with extraordinary flair, *Civilizations* redefines the subject that has fascinated historians from Thucydides to Gibbon to Spengler to Fernand Braudel: the nature of civilization. To the author, Oxford historian Felipe Fernandez-Armesto, a society's relationship to climate, geography, and ecology are paramount in determining its degree of success. Unlike previous attempts to write the comparative history of civilizations, he writes, it is arranged environment by environment, rather than period by period or society by society. Thus, for example, tundra civilizations of Ice Age Europe are linked with those of the Inuit of the Pacific Northwest, the Mississippi Mound Builders with the deforesters of eleventh-century Europe. *Civilizations* brilliantly connects the world of ecologist, geologist, and geographer with the panorama of cultural history.

So You Think You're Human?

You think you're human. But what does that mean? How can humanity be defined? Felipe Fernandez-Armesto takes us on an enlightening and provocative journey through the history of humankind to reveal the challenges to our most fundamental belief - that we are, and have always been, human. Shows how our concept of humankind has changed over time and how our current understanding of this has been shaken by new challenges from science and philosophy

The World

The World: A Brief World History, Volume II.

The World

This is the world history book that gives students the whole story. The World is the first world history textbook that shows, through a holistic, truly engaging narrative, the fundamental interrelationships between peoples and their environment. This is the first textbook for which the AUTHOR's ability to tell the story of the World will help students to learn world history, and help teachers to teach world history. AUTHOR Felipe Fernandez-Armesto is a world renowned historian, world respected scholar, successful AUTHOR of more than 25 books translated into 22 languages, as well as an exceptional

writer, highly sought after speaker, and inspiring classroom teacher. Felipe Fernandez-Armesto is a master historian and storyteller. His work and his writing have helped to shape and define the discipline. The World also features an innovative map program created exclusively for this text by Dorling Kindersley, unique images from around the world, a new document CDROM called Primary Source included in the text. Near a Thousand Tables

In *Near a Thousand Tables*, acclaimed food historian Felipe Fernández-Armesto tells the fascinating story of food as cultural as well as culinary history -- a window on the history of mankind. In this "appetizingly provocative" (Los Angeles Times) book, he guides readers through the eight great revolutions in the world history of food: the origins of cooking, which set humankind on a course apart from other species; the ritualization of eating, which brought magic and meaning into people's relationship with what they ate; the inception of herding and the invention of agriculture, perhaps the two greatest revolutions of all; the rise of inequality, which led to the development of haute cuisine; the long-range trade in food which, practically alone, broke down cultural barriers; the ecological exchanges, which revolutionized the global distribution of plants and livestock; and, finally, the industrialization and globalization of mass-produced food. From prehistoric snail "herding" to Roman banquets to Big Macs to genetically modified tomatoes, *Near a Thousand Tables* is a full-course meal of extraordinary narrative, brilliant insight, and fascinating explorations that will satisfy the hungriest of readers.

1492

1492: Not Simply the Year Columbus Sailed the Ocean Blue . . . In this extraordinary, sweeping history, Felipe Fernández-Armesto traces key elements of the modern world back to that single fateful year when everything changed.

The Americas

From food to the spread of political ideas, the landmass from northern Canada to the southern tip of Argentina is complexly bound together, yet these connections are generally ignored. In this groundbreaking and vividly rendered work, leading historian Felipe Fernández-Armesto tells, for the first time, the story of our hemisphere as a whole, showing why it is impossible to understand North, Central, and South America in isolation, and looking instead to the intricate and common forces that continue to shape the region. With his trademark erudition, imagination, and thematic breadth, Fernández-Armesto ranges over commerce, religion, agriculture, the environment, the slave trade, culture, and politics. He takes us from man's arrival in North America to the Colonial and Independence periods, to the "American Century" and beyond. For most of human history, the south dominated the north: as Fernández-Armesto argues in his provocative conclusion, it might well again. A panoramic yet richly textured story that embodies fresh ways of looking at cross-cultural exchange, conflict, and interaction, *The Americas* demolishes our traditional ways of looking at the hemisphere, putting in place a compelling and fruitful new vision.

The Nature of Civilizations

A distinguished historian and author of *Millennium* looks at what it means to be human in an enlightening history of humankind, confronting the dilemma of what it means to be human from a historical perspective and how that perception has been changed by recent discoveries from science and philosophy. 20,000 first printing.

Humankind

In this book, Barry and Gail Lord focus their two lifetimes of international experience working in the cultural sector on the challenging questions of why and how culture changes. They situate their discourse on aesthetic culture within a broad and inclusive definition of culture in relation to material, physical and socio-political cultures. Here at last is a dynamic understanding of the work of art, in all aspects, media and disciplines, illuminating both the primary role of the artist in initiating cultural change, and the crucial role of patronage in sustaining the artist. Drawing on their worldwide experience, they demonstrate the interdependence of artistic production, patronage, and audience and the remarkable transformations that we have witnessed through the millennia of the history of the arts, from our ancient past to the

knowledge economy of the twenty-first century. Questions of cultural identity, migration, and our growing environmental consciousness are just a few examples of the contexts in which the Lords show how and why our cultural values are formed and transformed. This book is intended for artists, students, and teachers of art history, museum studies, cultural studies, and philosophy, and for cultural workers in all media and disciplines. It is above all intended for those who think of themselves first as audience because we are all participants in cultural change.

Artists, Patrons, and the Public

1492: The Year the World Began is a look at one of the most fascinating years in world history, the year when many believe the modern world was born. Historian Felipe Fernandez-Armesto, author of *Millennium*, covers such iconic figures as Christopher Columbus and Alexander Borgia and explores cultures as diverse as that of Spain, China, and Africa to tell the story of 1492, a momentous year whose lessons are still relevant today

The Canary Islands After the Conquest

In the past decade, Ecuador has seen five indigenous uprisings, the emergence of the powerful Pachakutik political movement, and the strengthening of the Confederation of Indigenous Nationalities of Ecuador and the Association of Black Ecuadorians, all of which have contributed substantially to a new constitution proclaiming the country to be “multiethnic and multicultural.” Furthermore, January 2003 saw the inauguration of a new populist president, who immediately appointed two indigenous persons to his cabinet. In this volume, eleven critical essays plus a lengthy introduction and a timely epilogue explore the multicultural forces that have allowed Ecuador's indigenous peoples to have such dramatic effects on the nation's political structure.

Sustainability Matters

Based on the philosophy of Systems Science and the law of evolution theory, the book, by applying the methods of structural functionalism, divides the modern social system into human-culture, economy, polity, science, law, education and other sub-systems through the systematic synthesis of disciplines such as economics, sociology, management, politics, culture theories, history and philosophy, and explores the connection between these sub-systems and their intricate relation with social progress, thus depicting the historical trajectory of the long-term evolution of human social system. Starting from the actual production and operation of the firms, the author systematically analyses the organic connections and sophisticated operating process of social reproduction in modern society from micro, meso and macro, revealing the dynamic structure and evolutionary laws of the social economic system. This book reveals the fractal features such as self-similarity, hierarchy, and recursiveness in the general structure of the firm system, the sector system and the national economic system, thereby integrating micro-, meso- and macro-economics into a unified theoretical framework. This integration is interdisciplinary, and has gone beyond the economics. It can be regarded as the fourth grand synthesis in the history of economics after John Stuart Mill (1806-1873), Alfred Marshall (1842-1924) and Samuelson (1915-2009).

Cultural Competence in America's Schools: Leadership, Engagement and Understanding focuses on explicating the impact of culture and issues of race and ethnicity on student learning, teacher and leadership efficacy, and educational policy making in our nation's public school system. The authors agree with Levin (2012), who pointed out that the challenge of dealing effectively with racial and ethnic diversity in education in traditionally homogeneous societies is a global problem. One indicator of this point is revealed in a U.S. study that was commissioned by the National Comprehensive Center for Teacher Quality, which reported on the serious consequences for student achievement and teacher effectiveness in the face of "the gap between teacher training and the realities of the classroom when it comes to teaching diverse populations and students with special needs." (Public Agenda, 2008, p. 2).

Helix Network Theory

The book makes a unique contribution to civilizational theory. It traces contemporary social and political crises in Western and Eurasian societies to a process of civilizational decline initiated by war and revolution last century and now being completed by globalization.

Cultural Competence in America's Schools

Forget Climate Change – Today the world is on fire and we, the modern-day Neros, are busy fiddling. We are too caught up in frivolity to see the existential challenges staring us in the face. For example, climate change is real and it's coming around faster than you think, as proven by the catastrophic events all over the world. But it has become a cliché before it has even been understood. While we are busy merrymaking, another silent global crisis is creeping up on us. It is called soil degradation. In the past 40 years alone, 30 percent of the planet's arable land has become unproductive due to erosion. At current estimates, nearly all of the remaining 11 billion acres of cropland and grazing land suffer from some degree of erosion. "We are overlooking soil as the foundation of all life on Earth," says Andres Arnalds, assistant director of the Icelandic Soil Conservation Service. Essentially, all life depends upon the soil. Someone has rightly put it, "Despite all our achievements we owe our existence to a six-inch layer of topsoil and the fact that it rains."

Politics, Ethics and Culture in Our Time

Listening to British Nature: Wartime, Radio, and Modern Life, 1914-1945 traces the impact of sounds and rhythm of the natural world and how they were listened, interpreted, and used amid the pressures of modern life to in early twentieth-century Britain. Author Michael Guida argues that despite and sometimes because of the chaos of wartime and the struggle to recover, nature's voices were drawn close to provide everyday security, sustenance and a sense of the future. Nature's sonic presences were not obliterated by the noise of war, the advent of radio broadcasting and the rush of the everyday, rather they came to complement and provide alternatives to modern modes of living. Listening to British Nature examines how trench warfare demanded the creation of new listening cultures in order to understand danger and to imagine survival. It tells of the therapeutic communities who used quiet and rural rhythms to restore shell-shocked soldiers and of ramblers who sought to immerse themselves in the sensualities of the outdoors, revealing how home-front listening in the Blitz was punctuated by birdsong broadcast by the BBC. In focusing on the sensing of sounds and rhythms, this study demonstrates how nature retained its emotional potency as the pace and unpredictabilities of life seemed to increase and new man-made sounds and sonic media appeared all around. To listen to nature during this time was to cultivate an intimate connection with its vibrations and to sense an enduring order and beauty that could be taken into the future.

Forget Climate Change

An examination of how Western visions of endless future growth have contributed to the global environmental crisis. For centuries, the West has produced stories about the future in which humans use advanced science and technology to transform the earth. Michael Rawson uses a wide range of works that include Francis Bacon's *New Atlantis*, the science fiction novels of Jules Verne, and even the speculations of think tanks like the RAND Corporation to reveal the environmental paradox at the heart of these narratives: the single-minded expectation of unlimited growth on a finite planet. Rawson shows how these stories, which have long pervaded Western dreams about the future, have helped to enable an unprecedentedly abundant and technology-driven lifestyle for some while bringing the threat of environmental disaster to all. Adapting to ecological realities, he argues, hinges on the ability to create new visions of tomorrow that decouple growth from the idea of progress.

Listening to British Nature

In his book, Vyacheslav Nikonov shows the origins of the modern world and traces the chronologies and histories of peoples and countries. Nikonov discusses the main centers of influence and forces that shape the world in which we live. The world demonstrates a variety of development models shaped by the national, regional, historical, religious and other aspects of each country. The center of gravity of world development is shifting from West to East, from North to South, from developed economies to developing ones. Thirty years ago, Western countries accounted for 80% of the world economy; now it is less than half. Asia, already home to most of humanity, will become a global leader in the coming decades. What does this mean? What will the world be like and what place will Russia take in it? Will American hegemony continue? Will China become a superpower? Will Europe become a museum for tourists from other continents? History has resumed its course and the world is rushing towards an unstoppable diversity. Published with the support of the Institute for Literary Translation, Russia.

The Nature of Tomorrow

Rethinking Civilization offers an alternative view of human civilization in a globalizing age. Majid Tehranian analyses the transition from nomadic, to agrarian, commercial, industrial, and digital civilizations and argues that the growing gaps among the five major civilizations have led to terror operating as a form of global communication. This new book explores the uneven pace of development of human societies, particularly in the last two centuries, and argues that this is leading to a global civil war. Taking a long-term historical perspective, and developing a model that explains how empires, resistance, and civilizations have evolved alongside major technological breakthroughs in history, Tehranian offers a multi-cultural and multi-disciplinary analysis of the phenomenon. Seeking to counter the current rhetorical trends, Tehranian reconceptualizes "civilization" to make it a useful analytical rather than ideological category. defines the varieties of terrorism, including structural, nuclear, state, opposition, messianic, and anomic. addresses the contemporary problems of global governance and the evolution of international relations. traces the evolution of global communication from orality to literacy, print, electronic, and digital modes. forecasts the emerging problems of encounters among the five civilizations. This unique and original volume will be of great interest to students and researchers of globalization, international relations, peace studies and sociology.

The Code of Civilization

This book describes a wide variety of speculations by many authors about the consequences for humanity of coming into contact with extraterrestrial intelligence. The assumptions underlying those speculations are examined, and some conclusions are drawn. The book emphasizes the consequences of contact rather than the search, and takes account of popular views. As necessary background, the book also includes brief summaries of the history of thinking about extraterrestrial intelligence, searches for life and for signals, contrasting paradigms of how contact might take place, and the paradox that those paradigms allegedly create.

Rethinking Civilization

Latent in the current environment of rapid technological advances are breakthroughs waiting to be discovered that will have profound impacts on how organizations will cope with the direction civilization is taking. *Information Technology and Societal Development* examines in depth the full range of impacts of information technology on civilization and the development of societies. Uniquely broad in the scope

of examining the societal implications of informational technology, this groundbreaking reference work makes an essential contribution to research libraries worldwide.

Contact with Alien Civilizations

This book provides concise and cutting-edge reviews in astrobiology, a young and still emerging multidisciplinary field of science that addresses the fundamental questions of how life originated and diversified on Earth, whether life exists beyond Earth, and what is the future for life on Earth. Readers will find coverage of the latest understanding of a wide range of fascinating topics, including, for example, solar system formation, the origins of life, the history of Earth as revealed by geology, the evolution of intelligence on Earth, the implications of genome data, insights from extremophile research, and the possible existence of life on other planets within and beyond the solar system. Each chapter contains a brief summary of the current status of the topic under discussion, sufficient references to enable more detailed study, and descriptions of recent findings and forthcoming missions or anticipated research. Written by leading experts in astronomy, planetary science, geoscience, chemistry, biology, and physics, this insightful and thought-provoking book will appeal to all students and scientists who are interested in life and space.

Information Technology and Societal Development

“Phenomenal . . . A must read for us who desire to topple the dictatorship of relativism and culture of death and replace it with the only alternative” (The Imaginative Conservative). Especially concerned with the public nature of religion, historian Glenn W. Olsen—author of *Christian Marriage: A Historical Study* and *On the Road to Emmaus: The Catholic Dialogue with American and Modernity*—sets forth an exhaustively researched and persuasive account of how religion has been reshaped in the modern period. *The Turn to Transcendence* traces both the loss of transcendence and attempts to recover it while making its own proposals. Neither reactionary nor modernist, it questions how—under conditions of modern life—some form of the sacred and some form of the secular might both flourish at the same time. But it also provides a warning that a religion unable to maintain itself with its own overt architecture, language, and calendars against an enveloping secular culture is destined for oblivion. “Glenn Olsen’s book could hardly be more pivotal or insightful. Confronting the growing amnesia regarding culture’s religious origin and transcendent purpose, Olsen proves both a masterful cartographer of modernity and a visionary of a culture that encourages and enables us to seek beyond ourselves.” —Carl A. Anderson, Supreme Knight of the Knights of Columbus “A brilliant book. It rests on an amazing amount of scholarship that is wide-ranging in history, literature, art, science, music, theology, and philosophy.” —James Hitchcock, professor of history, St. Louis University

Astrobiology

Offering a philosophy, methodology, and examples for history instruction that are active, imaginative, and provocative, this text presents a fully developed pedagogy based on problem-solving methods that promote reasoning and judgment and restore a sense of imagination and participation to classroom learning. It is designed to draw readers into the detective process that characterizes the work of professional historians and social scientists—sharing raw data, defining terms, building interpretations, and testing competing theories. An inquiry framework drives both the pedagogy and the choice of historical materials, with selections favoring the unsolved, controversial, and fragmented rather than the neatly wrapped up analysis of past events. *Teaching World History as Mystery: Provides a balanced combination of interestingly arranged historical content, and clearly explained instructional strategies* Features case studies of commonly and not so commonly taught topics within a typical world/global history curriculum using combinations of primary and secondary documents Discusses ways of dealing with ethical and moral issues in world history classrooms, drawing students into persisting questions of historical truth, bias, and judgment

The Turn to Transcendence

This book boldly unsettles the idea of globalization as a recent phenomenon—and one driven solely by Western interests—by offering a compelling new perspective on global interconnectivity in the nineteenth century. Jeremy Prestholdt examines East African consumers’ changing desires for material goods from around the world in an era of sweeping social and economic change. Exploring complex webs of local consumer demands that affected patterns of exchange and production as far away as India and the United States, the book challenges presumptions that Africa’s global relationships have

always been dictated by outsiders. Full of rich and often-surprising vignettes that outline forgotten trajectories of global trade and consumption, it powerfully demonstrates how contemporary globalization is foreshadowed in deep histories of intersecting and reciprocal relationships across vast distances.

Teaching World History as Mystery

A critical appraisal of Chiara Bottici's influential work on imaginal politics, this collection uses this rich theoretical framework for incisive analysis, within critical theory and political philosophy, psychoanalysis and sociology

Domesticating the World

In late nineteenth-century Mexico the Mexican populace was fascinated with the country's booming railroad network. Newspapers and periodicals were filled with art, poetry, literature, and social commentaries exploring the symbolic power of the railroad. As a symbol of economic, political, and industrial modernization, the locomotive served to demarcate a nation's status in the world. However, the dangers of locomotive travel, complicated by the fact that Mexico's railroads were foreign owned and operated, meant that the railroad could also symbolize disorder, death, and foreign domination. In *The Civilizing Machine* Michael Matthews explores the ideological and cultural milieu that shaped the Mexican people's understanding of technology. Intrinsically tied to the Porfiriato, the thirty-five-year dictatorship of Gen. Porfirio Díaz, the booming railroad network represented material progress in a country seeking its place in the modern world. Matthews discloses how the railroad's development represented the crowning achievement of the regime and the material incarnation of its mantra, "order and progress." The Porfirian administration evoked the railroad in legitimizing and justifying its own reign, while political opponents employed the same rhetorical themes embodied by the railroads to challenge the manner in which that regime achieved economic development and modernization. As Matthews illustrates, the multiple symbols of the locomotive reflected deepening social divisions and foreshadowed the conflicts that eventually brought about the Mexican Revolution.

Debating Imaginal Politics

What happens when our developed knowledge does not support human activities in politics, economy, culture, and infrastructure today? The solution lies in knowing what wisdom is and willingly applying it to most of humanity's activities, transforming a chaotic civilization into a wise one. A merely knowledge-rich society cannot sustain its civilization without being wise and willing to learn and apply this essential human virtue in practice. This book investigates the issues of human cognition with regards to current issues surrounding globalization and civilization in such a way as to define wisdom not only as an art, but as a science too. Its investigation emphasises the learning of wisdom at schools and colleges, and stresses that its application in practice should be as commonplace as arithmetic.

The Civilizing Machine

A survey of the latest scholarship on Catholic missions between the 16th and 18th centuries, this collection of fourteen essays offers a global view of the organization, finances, personnel, and history of Catholic missions to the Americas, Africa, and Asia.

Wisdom in the Context of Globalization and Civilization

New insights on global histories and Western civilization from leading scholars in the field Described as "the New York Review of Books for history," *Historically Speaking* has emerged as one of the most distinctive historical publications in recent years, actively seeking out contributions from a pantheon of leading voices in historical discourse from both inside and outside academia. *Recent Themes in World History and the History of the West* represents some of the best writing on Western civilization and world history in the past five years. This collection of essays and interviews from *Historically Speaking* gives leading historians' approaches to the continually evolving field of world history, with a specific emphasis on the relationship of Western civilization to the history of the world. The book also discusses the effect of empire on global history and the many ways empire continues to manifest in the contemporary world. The contributors discuss world history as an intricate story of the connections within the global community, rather than a tidy, static narrative that attempts to summarize everything in our global past. In this volume the study of world history is presented as a constantly comparative endeavor, concerned with the major themes that link and divide humanity.

A Companion to the Early Modern Catholic Global Missions

Throughout all ages, the activities of mankind have weighed heavily upon the environment. In turn, changes in that environment have favoured the rise of certain social groups and limited the actions of others. Despite this, environmental history has remained a 'blind spot' for most social and economic historians. This is to be regretted, as the various and unequal effects of environmental change often explain the strengths and weaknesses of certain social groups, irrespective of their being defined along the lines of class, gender and ethnicity. This volume brings together the expertise of social and environmental historians in an effort to assess the extent to which transnational agents changed socioecological space as a consequence of globalization since the Late Middle Ages.

Recent Themes in World History and the History of the West

A Companion to World History presents over 30 essays from an international group of historians that both identify continuing areas of contention, disagreement, and divergence in world and global history, and point to directions for further debate. Features a diverse cast of contributors that include established world historians and emerging scholars Explores a wide range of topics and themes, including and the practice of world history, key ideas of world historians, the teaching of world history and how it has drawn upon and challenged "traditional" teaching approaches, and global approaches to writing world history Places an emphasis on non-Anglophone approaches to the topic Considers issues of both scholarship and pedagogy on a transnational, interregional, and world/global scale

Globalization, Environmental Change, and Social History

This book focuses on the forces of social change and what they have meant in the lives of the people caught in the middle of them from medieval times through our current era of globalization.

A Companion to World History

Broadly speaking, academic tourism research comes in two main shapes - why and how to. Both traditions seem unable to ever meet and their trajectory reminds of scissors agape. This title argues that tourism research finds itself in a serious scissors crisis. It reflects on how the crisis came about and looks at its effect on the real world.

The Modernization of the Western World

What does the good life mean in a "backward" place? As communist regimes denigrated widespread unemployment and consumer excess in Western countries, socialist Eastern European states simultaneously legitimized their power through their apparent ability to satisfy consumers' needs. Moving beyond binaries of production and consumption, the essays collected here examine the lessons consumption studies can offer about ethnic and national identity and the role of economic expertise in shaping consumer behavior. From Polish VCRs to Ukrainian fashion boutiques, tropical fruits in the GDR to cinemas in Belgrade, *The Socialist Good Life* explores what consumption means in a worker state where communist ideology emphasizes collective needs over individual pleasures.

Neuroanatomy

The Sixth Edition of Dr. Haines's best-selling neuroanatomy atlas features a stronger clinical emphasis, with significantly expanded clinical information and correlations. More than 110 new images--including MRI, CT, MR angiography, color line drawings, and brain specimens--highlight anatomical-clinical correlations. Internal spinal cord and brainstem morphology are presented in a new format that shows images in both anatomical and clinical orientations, correlating this anatomy exactly with how the brain and its functional systems are viewed in the clinical setting. A new chapter contains over 235 USMLE-style questions, with explained answers. This edition is packaged with Interactive Neuroanatomy, Version 2, an interactive CD-ROM containing all the book's images.

Interactive Neuroanatomy

This new version of Interactive Neuroanatomy contains all 605 images from the new Sixth Edition of Dr. Haines's best-selling neuroanatomy atlas, plus labels that can be turned on or off, multiple-choice testing, and Stedman's definitions of clinical terms. Images of internal spinal cord and brainstem morphology and of functional components, tracts, pathways, and systems can be rotated from anatomical to clinical orientations, enabling students to see exactly how the brain and its functional systems are viewed in the clinical setting. All images are presented in both PDF format for printing and JPEG format for downloading to PowerPoint. Windows / Macintosh Compatible

Neuroanatomy

Now in its 25th year, this best-selling work is the only neuroanatomy atlas to integrate neuroanatomy and neurobiology with extensive clinical information. Basic Human Neuroanatomy: A Clinically Oriented Atlas

The sixth edition of this popular neuroanatomy atlas retains valuable features of prior editions: low cost and presentation of clinically relevant material in a manner conducive to self-study and review. The book

has four parts. The first is a review of the organization of the nervous system, emphasizing the cranial nerves. The second is a summary of the neuroanatomical pathways with accompanying diagrams. The third summarizes the vasculature of the CNS, supplemented by illustrations of the arteries and veins with angiograms placed opposite the illustrations. The fourth is an atlas of the human brain and spinal cord with CT and MRI scans placed opposite the brain sections. With this edition, Basic Human Neuroanatomy becomes essentially an electronic book, although it remains available in print. This allows most of the figures to be in color, and the book to be loaded onto any device that can display a PDF file. An associated website features additional learning material.

Human Neuroanatomy

The Human Brain in Dissection will significantly update the previous edition published in 1988. The last 20 years have seen a significant shift in the way that neuroanatomy is taught in both undergraduate and graduate neuroscience courses, as well as doctorate courses: not only has the time allocated for these courses been reduced, but the methodologies for teaching have become more focused and specific due to these time constraints. The Human Brain in Dissection, Third Edition will provide detailed features of the human brain with the above limitations in mind. 50 new plates will be added to the existing 123 in order to permit the student to see all salient structures and to visualize microscopic structures of the brain stem and spinal cord. Each chapter will cover a specific area of the human brain in such a way that each chapter can be taught in one two-hour neuroanatomy course. New to this edition is the inclusion of a section in each chapter on clinically relevant examples. Each chapter will also include a specific laboratory exercise. And finally, the author has included a question and answer section that is relevant to the USMLE, as well as recommended readings, neither of which were included in the previous editions. This new edition of The Human Brain in Dissection will allow the student to: understand basic principles of cellular neuroscience; learn gross and microscopic anatomy of the central nervous system (Brain, brainstem, and spinal cord); relate the anatomy of central neural pathways to specific functional systems; be able to localize and name a CNS lesion when presented with neurological symptoms, and appreciate higher cortical functions and how they relate to the practice of neurology. neuroscience

Oxford Textbook of Neurological Surgery

Neurosurgery is a rapidly developing and technically demanding branch of surgery that requires a detailed knowledge of the basic neuro-sciences and a thorough clinical approach. The Oxford Textbook of Neurological Surgery is an up-to-date, objective and readable text that covers the full scope of neurosurgical practice. It is part of the Oxford Textbooks in Surgery series, edited by Professor Sir Peter Morris. The book is split into 20 overarching sections (Principles of Neurosurgery, Neuro-oncology of Intrinsic Tumours; Extra-axial Tumours and Skull Lesions; Cerebro-Pontine Angle Tumours; Sellar and Supra-Sellar Tumours; Posterior Fossa Tumours; Pineal tumours; Uncommon Tumours and Tumour Syndromes; Neurotrauma and Intensive Care; Vascular Neurosurgery; Principles of Spinal Surgery; Spinal Pathology; Spinal Trauma; Peripheral Nerve Surgery; Functional Neurosurgery; Epilepsy; Paediatric Neurosurgery; Neurosurgery for Cerebrospinal Fluid Disorders and Neurosurgical Infection). Each section takes a dual approach with, 'Generic Surgical Management' chapters that focus on specific clinical problems facing the neurosurgeon (e.g. sellar/supra-sellar tumour, Intradural Spinal Tumours etc.) and 'Pathology-Specific' chapters (e.g. Glioma, Meningeal Tumours, Scoliosis and Spinal Deformity, Aneurysm etc.). Where appropriate, this division provides the reader with easily accessible information for both clinical problems which present in a regional fashion and specific pathologies. The generic chapters cover aspects such as operative approaches, neuroanatomy and nuances. Specifically each chapter in the book incorporates several strands. Firstly the fundamental neuroscience (anatomy, pathology, genetics etc.) that underlies the clinical practice. Secondly, a review of the requisite clinical investigations (e.g. angiography, electrodiagnostics, radiology). Thirdly, a thorough evidence based review of clinical practice. Following this a consideration of the key debates and controversies in the field with 'pro-' and 'con-' sections (e.g. minimally invasive spine surgery, microsurgical treatment of aneurysms) is provided. A summary of the key papers and clinical scales relevant to neurosurgery form the concluding part. The book is a 'one-stop' text for trainees and consultants in neurosurgery, residents, those preparing for sub-specialty exams and other professionals allied to surgery who need

to gain an understanding of the field. It acts as both a point of reference to provide a focussed refresher for the experienced neurosurgeon as well as a trusted training resource.

The Nervous System

Now in its sixth best-selling edition, The Human Nervous System: Structure and Function continues to combine clear prose with high-quality tailor-made medical illustrations to achieve for neuroscientists and medical students a succinct explanation of the fundamental principles behind the organization, structure, and function of the human nervous system. The distinguished authors take advantage of the many recent advances in neurobiology and molecular biology to include new coverage of such critical discoveries as stem cells, apoptosis, the role of the amygdala in stress, and the significance of dendritic spines. Among the core topics given expanded treatments are pain and pain pathways, the visual system, development and growth of the nervous system, the chemical senses of smell and taste, and the limbic system. There is also fresh material on neuronal stem cells, the auditory and vestibular systems, neurotransmitters as the chemical messengers of certain brain circuits, the cerebellum, and lesions of the spinal nerves, spinal cord, and brainstem. Award-winning medical illustrator Robert J. Demarest has created new and revised legacy illustrations in cooperation with his neuroscientist coauthors, adding 24 figures to the previous 149. His illustrations are designed to extract and visually highlight the essence of the neuroanatomical features embedded in the complexities of the nervous system, thereby allowing the reader to match the structures of the brain with conventional X-ray pictures, and CT, MRI, and PET scans. Highly praised and widely appreciated in its earlier versions, this new 6th edition of The Human Nervous System: Structure and Function incorporates all the latest neuroanatomical discoveries and offers medical students and interested neuroscientists a readily understandable and awe-inspiring view of the organization of the human nervous system. Its

explanatory power and visual insight make this book an indispensable source of quick understanding that readers will consult gratefully again and again.

Regulation of the Upstream Petroleum Sector

This discerning and comprehensive work will be a useful entry point for students embarking on study in petroleum law. Academics will find this timely examination to be an indispensable overview of upstream operations. Practitioners will find this book

Regional Environmental Law

The core focus of this timely volume is to ascertain how regional environmental law may contribute to the pursuit of global sustainable development. Leading scholars critically analyze the ways in which states may pool sovereignty to find solutions to

Waste Policy

From human waste to nuclear waste, the question of how we must manage what we no longer want, in terms of either recycling or disposal, is one of the most pressing issues in environmental law. Alexander Gillespie addresses the gaps in previous literatu

Shale Gas, the Environment and Energy Security

This pioneering and in-depth study into the regulation of shale gas extraction examines how changes in the constitutional set-ups of EU Member States over the last 25 years have substantially altered the legal leverage of environmental protection and energy security as state objectives. As well as offering the first formal assessment of the legality of fracking bans and moratoria, Ruven Fleming further proposes a new methodology for the development of legally sound regulation of new energy technologies in the context of the energy transition.

Charting the Water Regulatory Future

This book is about the issues, challenges and directions currently faced by water as a key resource for mankind. The book aims at providing a finer understanding of the water regulatory future. The contributions in this book are grouped around specific themes. In Part I, the contributions address the water challenge to public international law. In Part II, the authors explore the most pressing ethical, legal, and social issues. In Part III, the discussion covers the economic drivers shaping the future of water.

Paying the Carbon Price

Paying the Carbon Price analyses the practice of freely allocating permits in Emissions Trading Schemes (ETSs) and demonstrates how many heavy polluters participating in ETSs are not yet paying the full price of carbon. This innovative book provides a framework to assist policymakers in the design of transitional assistance measures that are both legally robust and will support the effectiveness of the ETSs whilst limiting negative impacts on international trade.

Environmental Border Tax Adjustments and International Trade Law

This timely book brings clarity to the debate on the new legal phenomenon of environmental border tax adjustments. It will help form a better understanding of the role and limits these taxes have on environmental policies in combating global environmental challenges, such as climate change.

The Privatisation of Biodiversity?

Current regulatory approaches have not prevented the loss of biodiversity across the world. This book explores the scope to strengthen conservation by using different legal mechanisms such as biodiversity offsetting, payment for ecosystem services and conservation covenants, as well as tradable

development rights and taxation. The authors discuss how such mechanisms introduce elements of a market approach as well as private sector initiative and resources. They show how examples already in operation serve to highlight the design challenges, legal, technical and ethical, that must be overcome if these mechanisms are to be effective and widely accepted.

Aquaculture Law and Policy

With aquaculture operations fast expanding around the world, the adequacy of aquaculture-related laws and policies has become a hot topic. This much-needed book provides a three-part guide to the complex regulatory landscape. The expert contributors first review the international legal dimensions, including chapters on law of the sea, trade, and access and benefit sharing. Part Two offers regional perspectives, discussing the EU and regional fisheries management organizations. The final part contains eleven case studies exploring how leading aquaculture producing countries have been putting sustainability principles into practice.

Shale Gas and the Future of Energy

The rapid growth of shale gas development has led to an intense and polarizing debate about its merit. This book asks and suggests answers to the question that has not yet been systematically analysed: what laws and policies are needed to ensure that shale gas development helps to accelerate the transition to sustainability? In this groundbreaking book, more than a dozen experts in policy and academia assess the role that sustainability plays in decisions concerning shale gas development in the US and elsewhere, offering legal and policy recommendations for developing shale gas in a manner that accelerates the transition to sustainability. Contributors assess good practices from Pennsylvania to around the planet, discussing how these lessons translate to other jurisdictions. Ultimately, the book concludes that major changes in law and policy are needed to develop shale gas sustainably. Policymakers and educators alike will find this book to be a valuable resource, as it tackles the technical, social, economic and legal aspects associated with this sustainability issue. Other strengths are its clear language and middle-ground policy perspective that will make *Shale Gas and the Future of Energy* accessible to both students and the general public.

Arctic Marine Sustainability

This book presents the latest scientific views on resource use conflicts in the Arctic seas. The main areas of focus are the biological resources of Arctic seas vs. exploitation of oil and gas resources, and the conflicts in between. In addition, climate change is presented as a stressor, which both limits and facilitates the economic availability of resources in the Arctic. The book is divided into five parts. Part 1 examines Arctic ecosystems, resilience of the marine environment and possible conflicts between industrial sector and biological world. The focus of Part 2 is on transport infrastructure along the northern routes. Issues such as Arctic maritime operations, black carbon and unmanned aerial vehicles are considered. Part 3 focuses on resource use conflicts in Arctic seas and on the most recent threats in terms of Arctic oil and gas exploration, offshore logistics operations as well as transportation of oil and oil products. Discussions in Part 4 of the book are concentrated around social aspects and involvement of local communities. Tourism development, preservation of indigenous culture, engagement of communities on relevant Arctic issues, search and rescue in the cold marine environment are examples of questions raised. The book reviews Arctic-specific petroleum regulations, the state of preparedness to oil spill accidents in the region as well as the latest developments in oil spill response technologies and their limitations. Search and rescue operations are reviewed and how working in this harsh Arctic environment affects the ability of rescue technicians to perform the required technical skills. Part 5 considers the sustainability challenges arising from the marine resource exploitation. The focus is on the vulnerability of Arctic ecosystems to disturbance – both natural and anthropogenic.

Social Licensing and Mining in South Africa

This book highlights the role of community trusts in social licencing through the lens of mining and mining disputes in South Africa. Employing elements of trust, acceptance and elite interaction as a framework, this book critically investigates the underlying dynamics of community development trusts and also the response of host communities to the inherent dilemma of the SLO concept, namely social legitimization versus corporate profits. Looking at formal versus informal regulatory requirements, popular mobilisation, and the interaction between the local population and mining companies, this book

constitutes a thorough look at the issues surrounding mining in South Africa and its effect on society. This book will be of interest to students and scholars of African studies, business in Africa, corporate responsibility, and development studies.

Petroleum Resource Management

Petroleum Resource Management offers a thought-provoking examination of how countries manage their offshore petroleum resources by comparing the different approaches to licensing and regulation taken by Australia, Norway and the UK. Based on extensive research into their policies, licensing systems and resource management regulations, including interviews with government regulators and companies, John Chandler explores how these countries all face similar challenges as their offshore petroleum basins mature, including smaller discoveries, marginal production and ageing infrastructure. Identifying further challenges such as climate change and the increasing accountability in relation to sustainability and social issues, Chandler analyses how their petroleum policy, systems of regulation, and regulators developed up to the present, and how they are responding to these challenges, as well as how they deal with exploration, development, infrastructure sharing, and production. This timely and informative book will be essential reading for those in petroleum policy and governance, including petroleum lawyers, government officials, regulators and analysts. Academics and students on courses relating to petroleum regulation and the governance of resources will also benefit from this engaging book.

The Character of Petroleum Licences

This innovative book explores the legal character of petroleum licences, a key vehicle governing the relationship between oil companies and their host states. Examining the issue through the lens of legal culture, it illustrates why some jurisdictions exert strong state control and others only minimal.

The Promoting and Licensing of Petroleum Prospective Acreage

This detailed work is based on more than ten years experience in conducting tenders for the licensing of petroleum prospective acreage on behalf of a number of sovereign governments in Europe, Africa and the former Soviet Union. It explains the processes of licensing from the points of view of the two main protagonists, the government bodies and the international oil companies. The book also gives due prominence to the interests of the host communities and to the environment, as well as to the neighbouring states and the other participants who may be affected by the licensing process. In the modern world petroleum licensing takes place in the full glare of attention from the press and from public opinion. This work breaks new ground in recommending ways in which government and the oil companies may devise best practice in licensing to serve the interest of all parties and also an ethical business environment.

Review of Regulatory Burden on the Upstream Petroleum (oil and Gas) Sector

"Identifies significant unnecessary costs from delays and uncertainties in obtaining approvals, duplication of compliance requirements, and inconsistent administration of regulatory processes." - foreword.

The Law on Petroleum Unitization

This comprehensive book addresses both the principles and the practicalities of petroleum unitization. Paul F. Worthington draws on both his extensive experience of the global petroleum industry and his insights into petroleum unitization in some 90 jurisdictions worldwide to map out the evolution of and rationale for unitization in legislation and to provide much-needed guidance on the formulation of a legislative framework for effective regulatory governance of the unitization process.

Upstream Law and Regulation

This practical new handbook analyses the most relevant petroleum provinces. The book summarises the upstream regulation and the key concerns in over 30 important and emerging oil and gas jurisdictions. Issues featured include the key terms of the petroleum law, the types of legal arrangement in place (ie, concession agreement, production sharing contract or service agreement), the fiscal terms, how to qualify to acquire acreage, type of governing law, dispute resolution mechanisms and governmental control.

The Legal Character of Petroleum Licences

Regulating Offshore Petroleum Resources examines the main regulatory characteristics of the Norwegian and the British models for petroleum exploration, production and supply. The authors explore to what extent these models are relevant for the design of regulatory models in countries with significant existing petroleum resources. The applicability of these regulatory models to countries with potential petroleum resources is also assessed.

Downstream Petroleum Sub Sector Performance Review Report for Year ...

This book addresses the challenges facing stable democratic states in dealing with oil companies in order to secure general welfare gains. Political stability means that such states should be able to take a longer term perspective. The principal topic considered is petroleum industry regulation but the insights extend to other non-renewable natural resources. A particular issue addressed is the question of tax competition between producing countries. Within the context of company/government relations the book considers such current topics as the challenges of dealing with merged companies and the strategic choices facing tax authorities.

Impact of Imported Petroleum Products on the Domestic Petroleum Industry

The grave concern of governments for the negative impact on the world climate caused by the release into the atmosphere of CO₂ resulting from human activity, and under human control, such as the burning and combustion of oil products from the refinery, of natural gas and coal (the fossil fuels) made it possible for the international community to agree to and establish a global climate agreement, viz. The Paris Agreement of 1915. In order to meet the objectives of this Agreement, governments will try (among other measures) to curb the consumption of fossil fuels. This will not be easy since, in particular in less advanced economies, fossil fuels are for the coming decades indispensable. In more advanced economies, there are alternatives available, but as long as a possible switching to nuclear fission energy meets with public opposition, even the more advanced economies will remain dependent on fossil fuels for the coming decades. In its deeply informed discussion of the involvement of industry and governments with the production and use of petroleum, the prodigious scope of the coverage encompasses the following and much more: technical and environmental aspects of the production of oil and natural gas; position and function of petroleum and natural gas in the economy; government policies and attitudes towards fossil fuels, particularly with respect to climate change; national and international regulation of onshore or offshore petroleum operations; how oil and natural gas markets work; old and new forms and manifestations of political risk; distinction between licence-based and contract-based petroleum legislation; production sharing agreements; and petroleum taxation. The author draws on laws, contracts, government policy documents, trade journals, and statistical data available from international organizations and institutes and international oil companies. Underlying much of the review and discussion are governmental concerns with the prospects for economic alternatives and control of CO₂ emissions. The often conflicting policy options open to governments and the consequences, if any, for both oil and natural gas and the petroleum industry are reviewed and discussed. All statistics and projections regarding reserves, production and consumption of oil and natural gas have been updated. Because so much continues to happen in the realm covered by this book, all who depend on its previous editions will need this updated and significantly rewritten edition. An indispensable resource for petroleum policymakers at every level, this book is of special importance and interest to petroleum venture managers, as well as for lawyers, independent consultants, and other professionals who are required to give advice with respect to the economic, regulatory, and cooperative aspects of petroleum operations.

Regulating Offshore Petroleum Resources

"This book explores the myriad issues that play out in the upstream petroleum industry of Ghana from a legal perspective. Focusing on Ghana as an emerging petroleum country, Thomas Kojo Stephens begins by examining whether the existing constitutional framework will be effective in governing the expanding oil and gas sector. Drawing on various approaches proffered by other experts in the field, Stephens looks at possible institutional structures that could be put in place and juxtaposes these ideas with the experience of Ghana to test the efficacy of these proposals. He also explores the types of contractual frameworks currently implemented in Ghana for comparison with other emerging petroleum economies, examining the barriers to effectiveness, novel provisions that must be incorporated and lessons learned from other regions. Finally, the book highlights how vital it is for the Ghanaian State to

monitor the use of petroleum revenue and make ethical investment decisions that prioritise the interests of Ghanaian citizens. Upstream Oil and Gas in Ghana will be of great interest to students and scholars of energy law and policy, oil and gas management and African Studies more broadly, as well as those working in the upstream petroleum industry"--

National Oil Security Policy

Combines technical information and related commercial issues on each stage of field development from licensing through to decommissioning. It takes the reader through the general principles of applying for licences in the UK, exploring for hydrocarbons, buying assets, raising money against those assets, the subsequent development and operation and eventual decommissioning. This is a textbook for anyone interested in this complex industry. It is an essential guide for new entrant companies, or anyone investing in UK oil and gas exploration and production or for professionals who are directly or indirectly involved in the industry. It is also vital for those in the supply chain who need to understand other parts of the industry outside their own area of expertise. It is also an essential reference for both training providers and for their clients learning about any aspect of the industry.

The Oil Supplies Industry

Recommends the establishment of "a new national offshore petroleum regulator in Commonwealth waters, and then provide state and territory governments, on a bilateral basis, the options of delegating existing petroleum-related regulatory responsibilities in coastal waters to this regulator." - page xx.

Petroleum Industry Regulation within Stable States

This book addresses the need for deeper understanding of regulatory and policy regimes around the world in relation to the use of water for the production of 'unconventional' hydrocarbons, including shale gas, coal bed methane and tight oil, through hydraulic fracturing. Legal, policy, political and regulatory issues surrounding the use of water for hydraulic fracturing are present at every stage of operations. Operators and regulators must understand the legal, political and hydrological contexts of their surroundings, procure water for use in the fracturing and extraction processes, gain community cooperation or confront social resistance around water, collect flow back and produced water, and dispose of these wastewaters safely. By analysing and comparing different approaches to these issues from around the globe, this volume gleans insights into how policy, best practices and regulation may be developed to advance the interests of all stakeholders. While it is not always possible to easily transfer 'good practice' from one place to another, there is value in examining and understanding the components of different legal and regulatory regimes, as these may assist in the development of better regulatory law and policy for the rapidly growing unconventional energy sector. The book takes an interdisciplinary approach and includes chapters looking at water-energy nexus security in general, along with issue-focused and geographically-focused case studies written by scholars from around the world. Chapter topics, organized in conjunction with the stage of the shale gas production process upon which they touch, include the implications of hydraulic fracturing for agriculture, municipalities, and other stakeholders competing for water supplies; public opinion regarding use of water for hydraulic fracturing; potential conflicts between hydraulic fracturing and water as a human right; prevention of induced seismic activity, and the disposal or recycling of produced water. Several chapters also discuss implications of unconventional energy production for indigenous communities, particularly as regards sustainable water management. This volume will be of interest to scholars and students of energy and water, regulators and policymakers and operators interested in ensuring that they align with emergent best global practice.

Petroleum, Industry and Governments

This title was first published in 2000: The most recent developments in occupational health and safety regulation in the UK's offshore oil industry represent a departure from traditional legal forms. But how should they best be understood and what advantages do they offer over the previous regulatory approaches? Informed by autopoiesis theory, this study takes seriously the notion of an empirical field constituted by diverse communicative systems and thus traces the development of the industry along a series of dimensions including those of management and engineering as well as of politics and regulation. Adapting cognitive mapping, the book offers graphic demonstrations of the resultant constructive misunderstandings of regulatory and scientific signals and accordingly an alternative perspective on the nature of risk. The latest regulatory developments are shown to possess the potential

to address these issues but only insofar as they are understood as distinct from previous legal forms and in particular as an example of reflexive law.

Upstream Oil and Gas in Ghana

This work brings together those acts, or sections of acts, which create statutory offences, with authoritative annotation. It includes statutory offences created by the Scottish parliament and deals with summary applications. (Includes service to the end of 1999)

The Technical and Legal Guide to the UK Oil and Gas Industry

In the UK, petroleum law and policy to date has focused on the oil and gas resources in the North Sea, and their regulation over the last 50 years. However, a new source of petroleum in the UK is emerging - that of the unconventional petroleum resource of shale gas. This thematic book considers shale gas law and regulation. While there is a focus on the UK, the book also places it within a wider global context. Rather than a theoretical focus, the book offers a practical, applicable focus, so that the reader can apply the legal principles and policies to their jurisdiction. Handbook of Shale Gas Law and Policy focuses on five major themes: overview and introduction to shale gas activities * shale gas economics and energy security * access to shale gas resources * shale gas law and regulation * the future of shale gas. (Series: Energy and Law, Vol. 18) Subject: Energy Law]

Review of Regulatory Burden on the Upstream Petroleum (oil and Gas) Sector

The proposition of the thesis is, in its role as the lead offshore petroleum regulator in Ghana, the Petroleum Commission is not competent enough to oversee robust offshore health and safety regulation. Two accounts are developed to support this claim. First, the conferment of dual licensing and health and safety regulatory functions on the Petroleum Commission gives rise to a potential conflict. Secondly, even recognising a distinction between formal and de facto independence, neither is present in the Petroleum Commission. A number of factors justify these assertions: not least the fact that the law establishing the Petroleum Commission confers discretionary powers on the executive and does not provide regulatory independence as a formal requirement. In addition, the Commission's financial and administrative procedures are determinable by influences external to it. Formal independence is not, however, in itself a sufficient condition for the proper exercise of regulatory discretion. It is necessary for the regulatory body in question to be able in fact to behave independently, that is, to develop and take ownership of regulatory values, which in turn depend on the possession of relevant competence and expertise. Based on comparative analysis of global offshore regulatory regimes, and backed by empirical evidence, the thesis recommends legislative reforms in Ghana aimed at a functional separation of petroleum licensing from health and safety regulation.

Regulating Water Security in Unconventional Oil and Gas
