Introduction to Group Policy - Introduction to Group Policy by ITFreeTraining 75,484 views 4 years ago 4 minutes, 42 seconds - Group Policy, is a very powerful feature that allows administrators to exercise a high level of control over the client's Windows ...

Group Policy, enables system administrators to have a ...

Group Policy was first introduced in Windows 2000. If you want to configure Windows, you could make changes via the registry. However, changes made to the registry are permanent and would manually need to be updated for each change. In contrast, Group Policy is far more flexible. Changes

in Group Policy are not permanent and can actually be rolled back at any time. To remove a change, the administrator would simply un-configure the group policy setting and Windows will handle the rest. The next consideration with using the registry is that the registry can change. This is common with new operating systems. If you control the user's experience using the registry, there is no guarantee that that same registry setting would work in the newer versions of Windows. With Group Policy, changes in Windows and even new versions of Windows are supported. Although Group Policy is updated, in most cases Group Policy will continue to work the same from version to version. In some cases, you may need to configure some additional settings to support newer operating systems because they have new features; however, you should not have to change any existing settings. You can see the advantages of Group Policy over traditional registry editing to configure computers in your organization.
