## Sabres Over MiG Alley

This is the story of the first jet versus jet war, the largest in number of victories and losses, and one of the few military bright spots in the Korean War. It tells how an outnumbered force of F-86 Sabres limited by range and restricted by the rules of engagement, decisively defeated its foe. Based on the latest scholarship, author Kenneth Werrell uses previously untapped sources and interviews with sixty former F-86 pilots to explore new aspects of the subject and shed light on controversies previously neglected. For example, he found much greater violation of the Yalu River than thus far has appeared in the published materials. The F-86 became a legend in "The Forgotten War" because of its performance and beauty, but most of all, because of its record in combat.

## MIG Alley - Sabres Vs. Migs Over Korea

The dogfights between World War II prop fighters such as the P-51 Mustang, P-47 Thunderbolt, Me 109 and Japanese Zero have been well documented over the years. However, very little has been written about the dogfights between the state-of-the-art swept wing jets that fought high above northwest Korea in an arena known as 'MiG Alley'. These pitted the North American F-86 Sabre versus the MiG-15 and they were flown by some of the best fighter pilots in history. The speeds at which these two fought initiated many new tactics for aerial combat. Toward the end of the Korean War, it was determined that the F-86 pilots had been flying against some of the most experienced Russian and Warsaw Pact pilots from the very beginning. Many of the Sabre pilots that had numerous kills against the MiGs were young Lieutenants with no World War II experience. Official USAF records state that 78 Sabres were lost in air-to-air action and 792 MiG-15's were shot down in aerial duels. This established a 10:1 ratio in favor of the F-86, although that figure has remained a controversial subject for over 50 years. With the dangerous air-to-ground missions flown by the aging F-80's and F-84's, the success of the F-86 carried over into the fighter bomber role. In January 1953, the F-51 Mustang Wing and the F-80 Wing converted over to the new bomb-carrying F-86F. This added a new dimension in that the new Sabre could work the close air support and interdiction mission and still defend itself against the MiG-15 threat without escorts. By the end of the war, there were four wings, based in South Korea, equipped with the F-86. This book is filled with personal recollections from the pilots that flew the F-86 - many are so vivid that you feel you are in the cockpit with them. It also contains some of the finest quality color images ever

published on the Sabre in combat; most were taken by the pilots and crew chiefs. In addition, there is an aircraft-by-aircraft record of every F-86 that flew during the war. This includes squadron assignment, Sabre losses, and final disposition. Also featured is a complete listing of confirmed kills by Sabres and a roster of Korean War aces. Apart from the eyewitness accounts, detailed Sabre information and superb photographs, 'MiG Alley' also features newly commissioned color artwork and color profiles. If you had to describe this book in only one word... it would be "ACTION"!

### F-86 Sabre vs MiG-15

As the routed North Korean People's Army (NKPA) withdrew into the mountainous reaches of their country and the People's Republic of China (PRC) funneled in its massive infantry formations in preparation for a momentous counter-offensive, both lacked adequate air power to challenge US and UN. Reluctantly, Josef Stalin agreed to provide the requisite air cover, introducing the superior swept-wing MiG-15 to counter the American's straight-wing F-80 jets. This in turn prompted the USAF to deploy its very best – the F-86A Sabre – to counter this threat. Thus began a two-and-a-half-year struggle in the skies known as “MiG Alley.” In this period, the unrelenting campaign for aerial superiority witnessed the introduction of successive models of these two revolutionary jets into combat. This meticulously researched study not only provides technical descriptions of the two types and their improved variants, complete with a “fighter pilot's assessment” of these aircraft, but also chronicles the entire scope of their aerial duel in “MiG Alley” by employing the recollections of the surviving combatants – including Russian, Chinese, and North Korean pilots – who participated.

### MiG Alley

Titled after the wartime nickname for the part of North Korea that was the epicentre of a bitter struggle for air superiority over the Korean Peninsula, MiG Alley offers an in-depth analysis of the US Air Force's war in Korea, packed with interesting and exciting personal stories based on first-person testimony from both American and Soviet sources. Following the end of the Korean War, the prevailing myth in the West was that of the absolute supremacy of US Air Force pilots and aircraft over their Soviet-supplied opponents. The claims of the 10:1 victory-loss ratio achieved by the US Air Force fighter pilots flying the North American F-86 Sabre against their communist adversaries, among other such fabrications, went unchallenged until the end of the Cold War, when Soviet records of the conflict were finally opened. Packed with first-hand accounts and covering the full range of US Air Force activities over Korea, MiG Alley brings the war vividly to life and the record is finally set straight on a number of popular fabrications. Thomas McKelvey Cleaver expertly threads together US and Russian sources to reveal the complete story of this bitter struggle in the Eastern skies.

For a carnivore there is nothing more satisfying than a pink and succulent T-bone steak, the sizzle of well-seasoned chicken on a barbecue, or a serve of crispy, roast pork crackling. Off The Bone gives both classic and contemporary recipes for cooking 'bone-in meat' - that is, meat that hasn't been filleted, and is cooked and served with the bone included. The benefits of these cuts are endless. The bone acts as a heat-conductor, so the meat cooks more evenly but still retains its juiciness. The cuts are typically cheaper, but no less tasty than their fileted counterparts. Recipes in this book are suitable for both novice and experienced cooks. If you're ever at a loss for what meat to choose, your local butcher will be knowledgeable about every type and portion of meat, and can advise on what will suit your taste and needs.

### MIG Alley: The Fight For Air Superiority [Illustrated Edition]

Includes more than 20 photo illustrations The fight for air superiority began the day the Korean War started and only ended with the armistice three years later. Once the shock of the North Koreans' invasion wore off, it did not take long for the United States Air Force, assisted by other United Nations air forces, to destroy the North Korean Air Force. The arrival of the MiG-15 in November 1950, often flown by Soviet pilots, changed things considerably however. For the remainder of the war, bitterly contested air battles were fought almost daily. Yet despite a decided numerical superiority in jet fighters, the Communists were never able to gain air superiority, testament to the skill and training of the UN fighter pilots, primarily those U.S. Air Force airmen flying the magnificent F-86 Sabre.

### Korean Air War

From acclaimed aviation historian Michael Napier, this is a highly illustrated survey of the air war over Korea. The Korean War holds a unique place in aviation history. It saw the first large-scale jet-versus-jet combat and it was the first military action of the Cold War, fought by both the newly independent United States Air Force and the recently formed Chinese People's Liberation Army Air Force. In a meticulously researched volume, former RAF Tornado pilot Michael Napier unravels the complex narrative of events, describing the course of operations in the air and the major campaigns of the land war. He examines in detail the air power of the major combatants, which included North and South Korea, the UK, Australia, Canada and South Africa as well as China, the USA and the USSR. Packed with stunning contemporary images and including first-hand combat reports, Korean Air War is a groundbreaking exploration of a much forgotten conflict, which nevertheless provided lessons about the organization and prosecution of modern aerial warfare that remain relevant through to the present day.

### A MiG-15 to Freedom

On September 21, 1953, U.S. airmen at Kimpo Air Base near Seoul, Korea, were startled to see landing a MiG-15, the most advanced Soviet-built fighter plane of the era, piloted by Senior Lieutenant No Kum-Sok, a 21-year-old North Korean Air Force officer. Once he landed, Lieutenant No found that his mother had escaped to the South two years earlier, and they were soon reunited. At his request, No came to the United States and became a U.S. citizen. His story provides a unique insight into how North Korea conducted the Korean War and how he came to the decision to leave his homeland.

### F-86 Sabre Aces of the 4th Fighter Wing

The entry of the United State's premier jet interceptor into the Korean War was triggered by the ever-increasing presence of the Soviet-built MiG-15 south of the Yalu River. The possibility of the USAF losing air supremacy over the Korean Peninsula was unacceptable. The 4th Fighter Wing got the call for combat in Korea. They were made up of a combination of new pilots right out of jet training and the older combat veterans of World War II vintage. This combination of pilot types wrote and re-wrote the text books on jet warfare. Of the 40 jet aces that the war produced, the 4th Wing boasted 24 of them. This book details these incredible pilots and the planes they flew.

### Korean War Aces

The first virtually all-jet war, the conflict in Korea saw F-86 Sabres of the USAF take on MiG-15s of the North Korean and Chinese air forces. Although the Allied pilots were initially taken aback by the ability of the communist fighter in combat, sound training and skilful leadership soon enabled Sabre pilots to dominate the dogfights over the Yalu River. In all 39 F-86 pilots achieved ace status, and a number of these are profiled in this volume, as are notable pilots from the US Navy, Marine Corps and Royal Navy and, for the first time, the handful of MiG-15 aces.

### F-86A Sabre

Strap in alongside the Sabre pilots as they experienced the world's first large-scale jet-vs-jet combats. Brought to life with innovative tactical artwork and dramatic first-hand accounts from the pilots themselves. The F-86A Sabre had entered USAF service in 1949, and in December 1950 three squadrons were sent to South Korea. Despite primitive basing conditions and overwhelming Chinese opposition, the Sabre pilots stopped communist air forces from attacking UN ground troops and allowed Allied fighter-bombers to operate without threat of interception. The ensuing air battles between Sabres and MiG-15s were the first since World War II, and the last in recent times to involve large numbers of jet fighters in direct confrontation. In all of them the victorious F-86 pilots demonstrated the superiority of their training and tactics and the outstanding qualities of their Sabres. Contemporary photographs and specially commissioned artwork, including a dramatic battlescene, armament views, technical diagrams and ribbon diagrams illustrating step-by-step each main dogfight explored in the book, bring the experiences of the Sabre pilots and their battle tactics vividly to life.

### Sabre Wrath

From best selling author Steve Stone, comes Sabre Wrath from his 'Wrath' series. Mig Alley was an area over the northwestern portion of North Korea, where the Yalu River empties into the Yellow Sea. At the height of the Korean War, the North American F-86 Sabre and Soviet-built Mikoyan-Gurevich MiG-15, took part in the first large-scale jet-vs-jet air battles. Two brilliant, jet fighters lock horns in a

duel to the death over North Korea. Follow the gripping story, from the inception of the F86 Sabre and Mig-15, to them being used in anger over North Korea. Strap yourself in, for some 1950s, high-g jet action

### Black Tuesday Over Namsi

A gripping true account of warfare in the skies over Korea, when American bombers and North Korean jet fighters would change the course of air combat. On October 23, 1951, an hour and a half before sunrise, nine B-29s of the 307th Bombardment Wing took off from Kadena Air Force Base in Okinawa, Japan, on a bombing mission against Namsi—a North Korean airfield under construction in the heart of the shooting gallery known as MiG Alley. In under six hours, they would engage in a battle that would forever change the conduct of strategic aerial bombardment. Six of the nine aircrafts were shot down; the highest percentage of US bombers ever lost on a major mission. Unfortunately, this event that many experts consider the epic air battle of the Korean War—and perhaps the greatest jet engagement in the history of aerial warfare—has become another forgotten fight in a forgotten war. Here, Earl J. Hill presents the facts and circumstances of the mission from first briefing to final landing using historical documents, firsthand accounts of aircrew members and ground personnel from both sides, and photographs of the mission and its aftermath. This is the story of those who clashed in the skies above Namsi, the events leading up to it, and Black Tuesday's historical impact on the aerial warfare tactics.

### Unforgotten Hero

Unforgotten Hero tells the captivating life story of Second Lieutenant Jimmy L. Escalle, a U.S. Air Force fighter pilot who became missing in action during the Korean War. Growing up in a small farming town in California's San Joaquin Valley during the 1930s and 1940s, Jim was a devoted son, a caring older brother, a talented athlete, and a young man of moral character who always put others first. He started high school as the Second World War was at its peak, and graduated during a time of transition within America and around the world. He had always wanted to fly airplanes someday, and with the introduction of jet propulsion during his high school years, he dreamed of becoming a jet pilot. Called to serve his country after the Korean War began, his dream became a reality when he joined the Air Force and eventually got the opportunity to fly the F-86 Sabre, regarded as the most advanced jet fighter of its time. Soon after arriving in Korea he went on his first missions, which were MiG Alley sweeps. However, since Jim was assigned to a fighter-bomber squadron, the majority of his combat missions were air-to-ground. These were the most dangerous missions. In Korea, more pilots had been killed or listed as MIA due to being shot down by ground fire rather than enemy aircraft. For Jim, this fact was realized only five weeks before the armistice was signed. He paid the ultimate price for freedom when he disappeared while on a combat mission over North Korea and was never seen or heard from again.

### Red Devils over the Yalu

The Korean War (1950-1953) was the first - and only - full-scale air war in the jet age. It was in the skies of North Korea where Soviet and American pilots came together in fierce aerial clashes. The best pilots of the opposing systems, the most powerful air forces, and the most up-to-date aircraft in the world in this period of history came together in pitched air battles. The analysis of the air war showed that the powerful United States Air Force and its allies were unable to achieve complete superiority in the air and were unable to fulfill all the tasks they'd been given. Soviet pilots and Soviet jet fighters, which were in no way inferior to their opponents and in certain respects were even superior to them, was the reason for this. The combat experience and new tactical aerial combat tactics, which were tested for the first time in the skies of Korea, have been eagerly studied and applied by modern air forces around the world today. This book fully discusses the Soviet participation in the Korean War and presents a view of this war from the opposite side, which is still not well known in the West from the multitude

of publications by Western historians. The reason for this, of course, is the fact that Soviet records pertaining to the Korean War were for a long time highly classified, since Soviet air units were fighting in the skies of North Korea "incognito\

#### Within limits: The United States Air Force and the Korean War

Despite American success in preventing the conquest of South Korea by communist North Korea, the Korean War of 1950-1953 did not satisfy Americans who expected the kind of total victory they had experienced in World War II. In that earlier, larger war, victory over Japan came after two atomic bombs destroyed the cities of Hiroshima and Nagasaki. However, in Korea five years later, the United States limited itself to conventional weapons. Even after Communist China entered the war, Americans put China off-limits to conventional bombing as well as nuclear bombing. Operating within these limits, the U.S. Air force helped to repel two invasions of South Korea while securing control of the skies so decisively that other United Nations forces could fight without fear of air attack. This book tells the story of those limits from Invasion to Air Pressure as part of the Air Force's Fiftieth Anniversary Commemorative Edition.

#### Tiger Check

"The fielding of automated flight controls and weapons systems in fighter aircraft from 1950 to 1980 challenged the significance ascribed to several of the pilots' historical skillsets, such as superb hand-eye coordination--required for aggressive stick-and-rudder maneuvering--and perfect eyesight and crack marksmanship--required for long-range visual detection and destruction of the enemy. Highly automated systems would, proponents argued, simplify the pilot's tasks while increasing his lethality in the air, thereby opening fighter aviation to broader segments of the population. However, these new systems often required new, unique skills, which the pilots struggled to identify and develop. Moreover, the challenges that accompanied these technologies were not restricted to individual fighter cockpits, but rather extended across the pilots' tactical formations, altering the social norms that had governed the fighter pilot profession since its establishment. In the end, the skills that made a fighter pilot great in 1980 bore little resemblance to those of even thirty years prior, despite the precepts embedded within the "myth of the fighter pilot." As such, this history illuminates the rich interaction between human and machine that often accompanies automation in the workplace. It is broadly applicable to other enterprises confronting increased automation, from remotely piloted aviation to Google cars. It should appeal to those interested in the history of technology and automation, as well as the general population of military aviation enthusiasts."--Provided by publisher.

#### The Hunters

Captain Cleve Connell has already made a name for himself among pilots when he arrives in Korea during the war there to fly the newly operational F-86 fighters against the Soviet MIGs. His goal, like

that of every fighter pilot, is to chalk up enough kills to become an ace. But things do not turn out as expected. Mission after mission proves fruitless, and Connell finds his ability and his stomach for combat questioned by his fellow airmen: the brash wing commander, Imil; Captain Robey, an ace whose record is suspect; and finally, Lieutenant Pell, a cocky young pilot with an uncanny amount of skill and luck. Disappointment and fear gradually erode Connell's faith in himself, and his dream of making ace seems to slip out of reach. Then suddenly, one dramatic mission above the Yalu River reveals the depth of his courage and honor. Originally published in 1956, *The Hunters* was James Salter's first novel. Based on his own experiences as a fighter pilot in the Korean War, it is a classic of wartime fiction. Now revised by the author and back in print on the sixty-fifth anniversary of the Air Force, the story of Cleve Connell's war flies straight into the heart of men's rivalries and fears.

#### F-86 Sabre

With its distinctive wail the F-86 is remembered from the 1950s for its air superiority in the Korean War where it tangled with Russia's MiG-15 in the first jet versus jet combats. It was the first experience of high-speed jet flight for the NATO air forces and it closed the gap with the previously superior Soviet jet fighters. The design borrowed heavily from WWII German high speed flight research but was truly a pilot's airplane.

#### The Korean War

The Korean War has been termed "The Forgotten War" or the "Unknown War." It is a conflict which never assumed the mythic character of the American Civil War or World War II. However, this book asserts, it would be impossible to understand the Cold War and indeed post 1945 global history without knowledge of the Korean War. Providing a history of the Korean peninsula before the war and including a detailed analysis of the fighting itself, *The Korean War* goes beyond the battlefield to deal with the war in the air, ground attack, and air evacuation. The study also evaluates the contributions of the UN naval forces, the impact of the war on various homefronts and issues such as defectors, opposition to the war, racial segregation and integration, POWs and the media. Recently-released Soviet documents

are used to assess the role of China, the Soviet Union, North and South Korea and the allied forces in the conflict. This fascinating work offers a unique analysis of the Korean War and will be invaluable to students of twentieth-century history, particularly those concerned with American and Pacific history.

### F-86 Sabre Aces of the 51st Fighter Wing

The 51st Fighter Wing initially flew the F-80C in the Korean War, but in 1951, the 51st brought in high-scoring World War 2 ace Colonel Francis Gabreski to assume command when it converted from the F-80 over to the newly arrived F-86E. His recruits included his elite 4th Wing pilots, and by the end of the war, the 51st had two pilots who achieved the status of "Double Ace" as well as the highest scoring ace of the war, Joe McConnell. This book describes the 51st Wing's tenure with the Sabre that led to their high scoring sprees of 1953.

### The Korean War

The Korean War is the most comprehensive and detailed bibliography compiled to date on the American involvement in "The Forgotten War." In this revised and expanded second edition, Keith D. McFarland's clearly written annotations provide concise descriptions of more than 2,600 of the most important books, articles, and documents written in English on the conflict in Korea. Key topics include origins of the war; the political and military roles of North and South Korea, the United States, the Soviet Union, China, Great Britain, Canada, Australia, South Africa, Turkey, and other United Nations members; campaigns and battles; weapons and uniforms; and the military and diplomatic aspects of the war. Specific subjects are easy to find using the index organized by topic and author, making The Korean War a necessity for every academic or research library.

### A Concise History of the U.S. Air Force

Except in a few instances, since World War II no American soldier or sailor has been attacked by enemy air power. Conversely, no enemy soldier or sailor has acted in combat without being attacked or at least threatened by American air power. Aviators have brought the air weapon to bear against enemies while denying them the same prerogative. This is the legacy of the U.S. Air Force, purchased at great cost in both human and material resources. More often than not, aerial pioneers had to fight technological ignorance, bureaucratic opposition, public apathy, and disagreement over purpose. Every step in the evolution of air power led into new and untrodden territory, driven by humanitarian impulses; by the search for higher, faster, and farther flight; or by the conviction that the air was the best way. Warriors have always coveted the high ground. If technology permitted them to reach it, men, women, and an air force held and exploited it – from Thomas Selfridge, first among so many who gave that "last full measure of devotion"; to "Women's Airforce Service Pilot Ann Baumgartner, who broke social barriers to become the first American woman to pilot a jet; to Benjamin Davis, who broke racial barriers to become the first African American to command a flying group; to Chuck Yeager, a one-time non-commissioned flight officer who was the first to exceed the speed of sound; to John Levittow, who earned the Medal of Honor by throwing himself over a live flare to save his gunship crew; to John Warden, who began a revolution in air power thought and strategy that was put to spectacular use in the Gulf War. Industrialization has brought total war and air power has brought the means to overfly an enemy's defenses and attack its sources of power directly. Americans have perceived air power from the start as a more efficient means of waging war and as a symbol of the nation's commitment to technology to master challenges, minimize casualties, and defeat adversaries. This eight-two page book concludes that "future conflicts will bring new challenges for air power in the service of the nation."

### Congressional Record

The Congressional Record is the official record of the proceedings and debates of the United States Congress. It is published daily when Congress is in session. The Congressional Record began publication in 1873. Debates for sessions prior to 1873 are recorded in The Debates and Proceedings in the Congress of the United States (1789-1824), the Register of Debates in Congress (1824-1837), and the Congressional Globe (1833-1873)

In this volume, we examine the challenges and opportunities created by global migration at the start of the 21st century. Our focus extends beyond economic impact to questions of international law, human rights, and social and political incorporation. We examine immigrant outcomes and policy questions at the global, national, and local levels. Our primary purpose is to connect ethical, legal, and social science scholarship from a variety of disciplines in order to raise questions and generate new insights regarding patterns of migration and the design of useful policy. While the book incorporates studies of the evolution of immigration law globally and over the very long term, as well as considerations of the magnitude and determinants of immigrant flows at the global level, it places particular emphasis on the growth of immigration to the United States in the 1990s and early 2000s and provides new insights on the complex relationships between federal and state politics and regulation, popular misconceptions about the economic and social impacts of immigration, and the status of 'undocumented' immigrants.

The Three Wars of Lt. Gen. George E. Stratemeyer

This essential companion provides a comprehensive study of the literature on the causes, course, and consequences of the Korean War, 1950-1953. Aimed primarily at readers with a special interest in military history and contemporary conflict studies, the authors summarize and analyze the key research issues in what for years was known as the 'Forgotten War.' The book comprises three main thematic parts, each with chapters ranging across a variety of crucial topics covering the background, conduct, clashes, and outcome of the Korean War. The first part sets the historical stage, with chapters focusing on the main participants. The second part provides details on the tactics, equipment, and logistics of the belligerents. Part III covers the course of the war, with each chapter addressing a key stage of the fighting in chronological order. The enormous increase in writings on the Korean War during the last thirty years, following the release of key primary source documents, has revived and energized the interest of scholars. This essential reference work not only provides an overview of recent research, but also assesses what impact this has had on understanding the war.

The Ashgate Research Companion to the Korean War

The United States Air Force fought as a truly independent service for the first time during the Korean War. As a result, the fighter pilots reigned supreme. In Korea, American air power was challenged by the most advanced fighter of the time -- the Soviet MiG-15 -- and ruled the skies in many celebrated aerial battles. In addition, however, they destroyed virtually every major town and city in North Korea, demolished its entire crop irrigation system, and killed close to one million civilians. Korea, then, is the perfect laboratory for studying the culture of fighter pilots, a culture based on self-confidence and risk-taking, one which has promoted what John Darrell Sherwood calls "flight suit attitude." In *Officers in Flight Suits*, Sherwood explores the flight suit officer's life, drawing on memoirs, diaries, letters, novels, unit records, and personal papers as well as interviews with over fifty veterans who served in the Air Force in Korea. From their training to dramatic encounters during battle, from their socio-economic backgrounds to the flight suit culture they developed, Sherwood investigates every dimension of these pilots' lives. The book provides an illuminating portrait of fighter pilot culture, demonstrating how this culture affected their performance in battle and their attitudes toward others, particularly women, in their off-duty activities - Jacket flap.
