We must understand is the primary purpose of logos firstly to understand what a logo is. The aim of the design process is to make the logo immediately recognizable. The logo is one aspect of the commercial brand of any company or even economic entity. From the font to the color, the aesthetic components of a logo hugely impact how customers perceive your company. Is it attractive enough or does it repel them? Is it standing out or simply fading into the background? Does it successfully identify your brand or confusing enough to mix up with your competitors? During the research and design phase, these are all quality critical questions to ask. Only a smattering of the main ingredients far from the only ones is needed to create a successful logo. Too many websites today are still inaccessible. In our new book, we have explored crafting the process for flexible design patterns and how to make accessible interfaces without extra effort. Check out this book for a complete list of specific and prosecutable tips and ideas to help you design the best possible logo for your brand. In this book, we have covered step by step process that will guide you in making of a successful logo for your work purpose. Getting an exclusive logo design will ensure the visual identity of your company. Your logo design must be such that your brand stands out.

### Logos that Last

The world famous branding designer, Ivan Chermayeff said of the first edition of *Logo Design Theory*, "At last somebody actually understands what identity design is all about and how it is accomplished." *Logo Design Theory* explains the underlying principles of logo design, branding design, corporate identity design with clear examples and logical text. Section 1: Foundational Principles of Graphic Design In our digital age many design schools concentrate so much on design software that some basic precepts may be missing from the curriculum. Here are some essential principles that have great impact on branding design. Section Two: Branding Fundamentals Understanding some basics of branding history, both ancient and recent, will give us perspective on branding design today. Section Three: Core Principles: Generating Concepts Better identities are created from a position of wealth of concepts rather than just one or two concepts. A proven method to develop more and better corporate identity concepts. Section Four: Core Principles: Seven Deadly Sins of Logo Design Several common approaches to identity design prevent an identity from working in ways that every identity should be able to work. Section Five: Core Principles: Visual Techniques Any given concept can be executed in virtually endless ways. These techniques can transform a common concept into an uncommon, or even remarkable final identity. Section Six: Core Principles: Color, Typographic & Spatial Issues Even superior designs can be undermined by poor color, typographic or spatial choices and how to prevent that. Section Seven: Implementing Core Principles of Identity Design Hundreds of current examples demonstrate the consequences of deviating from the Core Principles of Branding Design plus the benefits of redesigning to abide by them.
